THE REMARKABLE SV-318 PERSONAL COMPUTER

You'll grow into it, not out of it.

© 1983 SPECTRA VIDEO, INC.

SV-601 SUPER EXPANDER

The real value in any computer system lies in its ability to accommodate a large variety of Input/output devices simultaneously. With the addition of the SV-601, the SV-318 can interface with as many as seven different devices at one time. Although lightweight, the SV-601 can support a 15" T.V. monitor. Special front view slots have been designed to monitor the operation of the different interface cards that are connected to the system.

SV-903 DATA CASSETTE

This feature packed data cassette draws power from the SV-318, to which it is connected. By using a stereo head, you can store data on one channel, and voice or sound on the other. This greatly enhances the usage of stored data. Programs such as foreign language tutorials and voice assisted training can be stored. The data cassette will be an integral part of your system even if you choose to expand into a disk drive. The cassette even has a built-in condenser microphone so you can write your own voice support programs.

ABLE MPUTER: out of it.

Man has only recently tested the waters of the home computer age, and he has found the waters to his liking. But with a brain capable of storing several trillion bits of information, he will be continually pushing his new found toy to greater limits. Will his machine live up to this challenge?

Sadly, many personal computers will become tomorrow's junk in the attic. The SV-318 is one that will not. Because as you get better, it gets better. It does so because of its capability and expandability—both far beyond those of any other affordable computer.

CAPABILITY. The SV-318 isn't just more capable. It's much more capable. No other computer at even twice the price combines all these extraordinary features: 32K ROM expandable to 96K; 32K RAM expandable to 144K; Extended Microsoft Basic (the industry standard); even Standard CP/M 80-column capability so you can immediately utilize over 10,000 existing software programs. The SV-318 also has a unique built-in joystick/cursor control—an immeasurably useful feature when it comes to playing your favorite video game.

EXPANDABILITY. As you become more and more skillful with computers, you'll love how the SV-318 "stretches" to meet your demands (and actually leads you in fascinating, new directions). For one thing, all eleven of our important peripherals are available immediately. With most other models, you have to wait months. For another, the SV-318 is beautifully designed to interface with new options as they become available.

AFFORDABILITY. The SV-318 is not only eminently affordable, it's the first true bargain of the computer age! Besides home budgeting, business applications, word processing, programming and self-teaching, the SV-318 is the best entertainment value in town. Not only can you use it with your TV to play hundreds of different video games, you can also use your SV-318 with a TV as a drawing tablet or music synthesizer. In play, as in work, the SV-318 will continually expand to meet your potential.

Whether you're just wetting your toes in computers, or fully afloat on the waters, the SV-318 is a computer that will serve you for many, many years. You see, we believe that even in the computer age, you don't become an object of real value unless you're around for a while.

SV-902 FLOPPY DISK DRIVE

This extremely compact, low profile unit uses standard 5 1/4" flexible diskettes. Its single side double density configuration allows a capacity of 256K bytes of data (unformatted). Linked to the Super Expander, the SV-902 is your key to the virtually unlimited scope of CP/M O/S as well as a complete variety of program languages such as LOGO, PASCAL, FORTRAN, COBOL and PL-1.

**ANNOUNCING
THE END OF
THE DISPOSABLE
COMPUTER.**

YOU WILL NEVER AGAIN HAVE TO WASTE TIME WAITING FOR YOUR PRINTER.

MICROBUFFER™ ALLOWS YOU TO PRINT AND PROCESS SIMULTANEOUSLY.

Microbuffer will instantly increase your efficiency — and eliminate the frustration of waiting for your slowpoke printer.

Now you can simply dump your printing data directly to Microbuffer and *continue processing*. Microbuffer accepts the data as fast as your computer can send. It stores the data in its own memory buffer, then takes control of your printer.

THERE IS A MICROBUFFER FOR ANY COMPUTER/PRINTER COMBINATION.

Whatever your system, there is a specific Microbuffer designed to accommodate it.

FOR APPLE II COMPUTERS, Microbuffer II features on-board firmware for text formatting and advanced graphics dump routines. Both serial and parallel versions

have a power-efficient low-consumption design. Special functions include Basic listing formatter, self-test, buffer zap, and transparent and maintain modes. The 16K model is priced at \$259 and the 32K, at \$299.

FOR EPSON PRINTERS, Microbuffer/E comes in two serial versions — 8K or 16K (upgradable to 32K) — and two parallel versions — 16K or 32K (upgradable to 64K). The serial buffer supports both hardware handshaking and XON-XOFF software handshaking at baud rates up to 19,200. Both interfaces are compatible with standard Epson commands, including GRAFTRAX-80 and GRAFTRAX-80+. Prices range from \$159 to \$279.

ALL OTHER COMPUTER/PRINTER COMBINATIONS are served by the stand-alone Microbuffer In-line.

The serial stand-alone will support different input and output baud rates and different hand-shake protocol. Both serial and parallel versions are available in a 32K model at \$299 or 64K for \$349. Either can be user-upgraded to a total of 256K with 64K add-ons — just \$179 each.

SIMPLE TO INSTALL.

Microbuffer II is slot-independent. It slips directly inside the Apple II in any slot except zero.

Microbuffer/E mounts easily inside the existing auxiliary slot directly inside the Epson printer.

The stand-alone Microbuffer is installed in-line between virtually any computer and any printer.

MICROBUFFER FROM PRACTICAL PERIPHERALS.

So what are you waiting for? Write to us for more information or ask your dealer for a demonstration.

When you see how much freedom Microbuffer will allow, you'll understand why it's so silly to be without one.

where to send it

All editorial material, including article submissions, press releases, and products for evaluation should be sent to:
Creative Computing
39 E. Hanover Ave.
Morris Plains, NJ 07950

Correspondence regarding other Creative Computing products and publications should also be sent to the Morris Plains address.

Correspondence related to advertising, including ad copy, questions on billing, and requests for rates, should be sent to:

Advertising Department
Creative Computing
Ziff-Davis Publishing Co.
One Park Ave.
New York, NY 10016

Correspondence regarding subscriptions, including orders, changes of address, and problems should be sent to:

Creative Computing
P.O. Box 5214
Boulder, CO 80321

Your help in choosing the correct address for your correspondence is appreciated. An incorrectly addressed letter or package can take as long as several weeks to reach its proper destination.

subscriptions

All subscriptions orders and other correspondence related to subscriptions should be addressed to:

Creative Computing
P.O. Box 5214
Boulder, Colorado 80321.

Foreign subscriptions must be accompanied by payment in U.S. currency.

Subscription prices:

U.S.	Canada	Foreign
1 year \$24.97	1 year 29.97	1 year 34.97
2 years 43.97	2 years 53.97	2 years 63.97
3 years 57.97	3 years 72.97	3 years 87.97

Airmail delivery on foreign subscriptions is available for a one-year period only at \$75.00 additional for mail to Asia and Australia, and \$50.00 additional for all other foreign.

Subscribers in the United Kingdom may send payment in sterling to:

Hazel Gordon
27 Andrew Close
Stoke Golding
Nuneaton, CV13 6EL

Please allow at least eight weeks for change of address. Include old address as well as new—enclosing if possible an address label from a recent issue.

CRYSTAL UNIFORMITY
ADVANCED BINDER
REFINED LUBRICANT
IMPROVED JACKET
INTENSIFIED CALENDERING

THE GOLD STANDARD

**You can wait for industry standards
to mandate improved performance.
Or you can have it now on Maxell.
The Gold Standard.**

The refinements of The Gold Standard, from oxide particles to lubricant to jacket, are uniquely Maxell. And therefore, so are the benefits.

Our unique, uniform crystals assure dense oxide packing. So you begin with an original signal of extraordinary fidelity. A signal we safeguard in ways that leave industry standards in our wake.

An advanced binder bonds oxides to the base material preventing time and money-wasting dropouts. Calendering then smooths the surface for a read/write signal that stays

clear and accurate. And lubricants reduce friction between head and disk for a longer media and head life. To house it, we then constructed a new jacket heat-resistant to 140° F to withstand drive heat without warp or wear. And created the floppy disk that leads the industry in error-free performance and durability.

All industry standards exist to assure reliable performance. The Gold Standard expresses a higher aim: perfection.

K-orrection

Dear Editor:

In your April 1983 issue of *Creative Computing*, it was printed that K-Byte was recently purchased by CBS. That statement is incorrect. K-Byte is a complete software development and manufacturing company devoted to servicing many software merchandisers.

K-Byte and CBS Software have a long-term contractual agreement whereby K-Byte provides CBS Software with computer software and manufacturing.

Troy, MI 48099

Manual Overdrive

Dear Editor:

We must thank John Anderson for his article on the Vic-1540 disk drive, contained in the 1983 Buyer's Guide. Had we purchased our 1540 prior to reading Mr. Anderson's review, I know it would have led to the termination of our budding computer addiction or our sanity.

Luckily we saw Mr. Anderson's article before we purchased the 1540. The manual would have left us totally confused, even though we now know what to expect from printed instructional material. It's impossible to detect errors if one does not understand the instructions in the first place.

Anyway, thanks to Mr. Anderson's User's Menu, we were able to plunge right in and enjoy using our disk drive.

Vini Wronski and family
P.O. Box 45
Boston Bar, B.C.

Tiny Text Templates

Dear Editor:

I recently purchased *Text Wizard* for my Atari 800 personal computer, and am quite satisfied with its capabilities. In fact, it performs one function that the documentation fails to mention. Since the same may well be true of other text processors, I thought it might interest your readers.

This software allows me to read in a text file to which I will simply append new material. Furthermore, it also recognizes printing commands which are imbedded in the text. Therefore, several text files consisting only of printing commands can be created. One of these tiny files can be designed for personal letters, one for business letters, one for memos, etc. I give these files very short names like P, B, and M. In each I put the appropriate formatting commands and for business letters, even my return address.

To use the file, I load it under its tiny name, add the new text, and then save it under a longer, more descriptive name (e.g., JULYMEMO). It makes my life a lot easier.

Robert E. Petersen
1081 Chandler St.
Tewksbury, MA 01876

Pointer Pointers

Dear Editor:

I have made a few improvements in my program "Financial Analysis for the Apple" (February, 1983, page 188) and would like to point out a potential "trap" which readers typing the program may encounter.

The Applesoft Speedup routine used in the Review Data subroutine (4000 series) and Sort subroutine (7000 series) temporarily modifies the Applesoft pointers to the beginning of the program. Thus if the program terminates in either of these subroutines (as can occur if typing errors are present) the pointers will not be restored as they are in a normal exit from the routines. If this occurs it will appear that the entire program preceding the subroutine has been lost (try listing the program). To recover the entire program type POKE 103,1: POKE 104,8. I recommend that readers save the program (after verifying that the pointers are normal) before running it.

To prevent the program from trying to delete record numbers higher than the last record which has been entered change line 3130 to 3130 D2 = VAL(A\$): IF D2 > NS THEN D2 = NS and add line 3135 IF D2 < > 0 THEN 3170.

The program will not delete a range of data if the "To" date is the same as or after the date of the last active record. To fix this deficiency add line 3255 IF N > NR THEN 3030 and change line 3270 to GOSUB 3200: N = I: GOTO 3255.

If line 4110 is changed to POKE 34, PEEK(37): IF NR = 0 THEN 4240 the program will not display one record of data even if all data have been deleted.

Readers who want to output the Nominal annual interest rate in addition to the Effective interest rate may do so with the following modifications: add line 5195 PRINT TAB(TB + 5)

TECMAR'S GRAPHICS MASTER.™

It adds graphics to your IBM Monochrome Display, or 16 high-resolution colors to your color monitor!

Now your IBM-PC can run monochrome or color displays with remarkably enhanced graphics... and all from this one multi-function board — no other video board needed!

With your IBM Monochrome Display, the Graphics Master™ board gives you truly high resolution graphics, allowing 640 horizontal x 350 vertical pixel display.

With other monochrome display screens you can obtain even higher resolutions — up to 640 H x 480 V, with full-page 80-character x 60-line text display.

With a color monitor, it extends your color graphics to 640 horizontal x 400 vertical 16-color interlaced display.

Graphics Master™ accepts external sync, so you can add labeling to images. You can overlay characters or other computer-generated images on a video picture using the PC-Mate™ Video Cassette Recorder Controller.

This remarkable new board fully supports all IBM advanced BASIC color graphics functions.

For further information about our Graphics Master™ and the largest line of options available anywhere for the IBM Personal

Computer, call or write for the latest catalog of PC-Mate™ peripherals from Tecmar.

A Fair Accounting

Dear Editor:

Ron Exner's review of *General Ledger* by B.P.I. is, in general, both fair and accurate. However, he implies in his article that *General Ledger* will ensure compliance with Generally Accepted Accounting Principles (G.A.A.P.). He in fact states "...the user can forget about Generally Accepted Accounting Principles..." Anyone who understands the concept of G.A.A.P. will realize at once that this is not true. I suggest that, at present, it is impossible to find any computerized accounting package that does ensure compliance with G.A.A.P.

A computer package is not capable of exercising the professional judgments required. In particular, it will not be able to select *appropriate* accounting policies. It will not, for example, know how to value inventory or how to depreciate fixed assets.

A computer package can not ensure that transactions are properly coded. Thus, the package does not even ensure the proper application of accounting policies.

The financial statements produced by these packages do not provide all the information which G.A.A.P. requires. This information includes such things as the accounting policies used. At best, such statements are suitable for internal use by people who are already familiar with such information.

A computer package would not usually know which country it is in. This is important information. Canadian G.A.A.P. are not the same as G.A.A.P. in the U.S.A., and the U.K. uses yet another version.

Dynamotives

Dear Editor:

Christopher Light's review of our Micro-DYNAMO package was so positive that we hate to quibble with it over the fine points of Apple's Pascal system. However, we think that his explanation of saving files could be misleading to your readers.

As Mr. Light said, we recommend the W option for writing files to disk. One reason for this is that when the user tries to write a new file under a name which is already on the disk, the Pascal system will verify that the old file should be destroyed before it will write the new file over the old. The U (for Update) option Mr. Light used always writes to the file SYSTEM.WRK.TEXT, the Editor's, but *not* Micro-DYNAMO's, default file. So long as SYSTEM.WRK.TEXT exists, it is impossible to edit any other file, and getting rid of it is not a trivial task (Q for quit, E for exit, F for filer, N for new work file, Q for quit, and E for edit).

We appreciate *Creative Computing's* constructive criticisms of our product, and are using them to improve the forthcoming version of Micro-DYNAMO for the IBM Personal Computer.

More On The TP-1

Dear Editor:

I read, with the interest of a new owner of a Smith-Corona TP-1, David Mannering's article "Low Cost Letter Quality Printing" (*Buyer's Guide*, 1983, page 98). The article has several discrepancies and omissions that I will address in this letter.

The most distressing statement concerns the stop printing feature associated with "lifting the top cover." This feature is a safety measure to prevent printer start up during ribbon or printhead changes rather than as a routine manual stop print function. Most good software that drives a printer will provide a start/stop print command. For example, a stop print command using *WordStar 3.0* is accomplished by typing the character P.

A distinction should have been made between the accessibility of the line spacing control and the inaccessibility of the light/dark impression control. The line spacing control can be adjusted with the paper stand/dust cover in the open position. However, to adjust the light/dark impression control, you must lift up the cabinet top housing. In most applications, the infrequency of making this latter adjustment was probably the reason that the control is not readily accessible.

Mr. Mannering leads the novice reader to believe that *WordStar's* bold face, double strike, underlining and strike out features are "completely disabled" with the TP-1. These features are available by selecting option 2 ("a printer that will backspace"). Superscripts and subscripts are also available as full line shifts.

The article failed to mention that there are missing characters (< > / ^) on the Pica 10 daisywheel. These characters are used by accountants and for program listings. Mention should also have been made of the lack of baud rate information from Smith-Corona. This information could be critical if the baud rate of the computer is fixed. Since the TP-1 is available with either a parallel or a standard RS-232 interface, the proper cord should be supplied with the unit for an additional charge.

TRUNKS FOR THE MEMORIES.

Introducing the most logical place to store Elephant Memory Systems® (or lesser brands of disks): The Trunk.

With its alphabetized library index, you can file or retrieve up to 60 disks, instantly.

The Trunk is made of durable molded plastic with a hinged, one-piece lid, to keep disks safe from dust, dirt, and other detriments which disks despise.

And, it's portable. Because the lid doubles as a carrying handle so your Elephant Memory Systems® disks can go anywhere you do.

There's a model for 5¼" and 8" floppies, as well as a cassette-and-game file and a special Atari® version.

So if you're looking for the best disk storage system on the market...

The Trunk is an open-and-shut case.

THE TRUNK. ENDORSED BY ELEPHANTS.

Elephant Memory Systems® Disks

A full line of top-quality floppies, in virtually every 5¼" and 8" model, for compatibility with virtually every computer on the market. Guaranteed to meet or exceed every industry standard, certified 100% error-free and problem-free, and to maintain its quality for at least 12 million passes (or over a life-time of heavy-duty use).

Marketed exclusively by Leading Edge Products, Inc., 225 Turnpike Street, Canton, Massachusetts 02021.

SPINNAKER'S LINE OF EARLY LEARNING GAMES IS GROWING AS FAST AS YOUR CHILD'S MIND.

Watching your kids grow up is a lot of fun. But making sure their minds grow as fast as their bodies is even more rewarding. That's where we can help. With a growing line of Early Learning Programs that are not only lots of fun to play, but also educational.

Some of the games you see on these two pages help exercise your child's creativity. Others help improve vocabulary and spelling skills. While others

improve your child's writing and reading abilities. And all of them help your child understand how to use the computer.

So if you're looking for computer programs that do more than just "babysit" for your kids, read on. You'll find that our Early Learning Programs are not only compatible with Apple®, Atari®, IBM® and Commodore 64™ computers, but also with kids who like to have fun.

HEY DIDDLE DIDDLE™ Poetry in motion. Ages 3 to 10.

Kids love rhymes. And since HEY DIDDLE DIDDLE features 30 classic rhymes with full color graphics and the neatest computer music you've ever heard, it makes rhyme games more fun than ever before.

Plus, it makes it fun for kids to read, helps them understand how words and rhymes create poetry and lets them take fragmented thoughts and rearrange them to form coherent verse.

The story of STORY MACHINE.™ Ages 5 to 9.

STORY MACHINE is like a storybook come to life. Using the keyboard, your children write their own fun little stories. The computer then takes what they've written and animates their story on the screen, com-

plete with full color graphics and sound. STORY MACHINE helps your children learn to write correctly, become familiar with the keyboard, and lets them have fun exercising their creativity at the same time.

KINDERCOMP.™ Numbers, shapes, letters, words and drawings make fun. Ages 3 to 8.

KINDERCOMP is a game that allows very young children to start learning on the computer. It's a collection of learning exercises that ask your children to match shapes and letters, write their names, draw pictures, or fill in missing numbers. And KINDERCOMP will delight kids with color-

ful rewards, as the screen comes to life when correct answers are given.

As a parent, you can enjoy the fact that your children are having fun while improving their reading readiness and counting skills.

FACEMAKER.™ makes faces fun. Ages 4 to 12.

FACEMAKER lets children create their own funny faces on the screen. Once a face is completed, your children will giggle with delight as they make it do all kinds of neat things: wink, smile, wiggle its ears, or whatever their imagination desires.

Plus, FACEMAKER helps children become comfortable with computer fundamentals such as: menus, cursors, the return key, the space bar, simple programs, and graphics. FACEMAKER

won't make parents frown because their children will have fun making friends with the computer.

In Search Of A Word Processor

3 2 1 0 9 8 7 6 5 4 3 2 1 0

Word processing—two of the most magical words in microcomputing. You have only to scan the shelves of a newsstand to find dozens of articles on the subject, and it has quickly become one of the most popular applications for small computers. Everyone who buys a computer for the home or the office wants to get into word processing.

Just a few years ago, word processing cost so much that only a few well-financed companies could afford the equipment and programming. Now, effective systems and the software to run them can be obtained for as little as \$2000, allowing anyone from the individual wishing to write personal letters, through small companies such as one-person consulting firms, to major corporations to pick and choose from a variety of systems and approaches.

Hardware and software suppliers have jumped into the field, eager to cash in on the popularity of automated typing. Today, it is hard to find any microcomputer system that doesn't run at least one such processor. Most modern microcomputers are capable of running a bewildering number of word processors with different approaches and methods. For just the Apple II, I have identified more than 35 word processing software packages ranging from under \$100 to more than \$500 with a variety of features that will satisfy almost any need.

Yet the popularity of this application also creates a difficult and often hazard-

Ernest E. Mau

ous situation for the user. There are so many packages and so many conflicting viewpoints concerning what a system should do and how it should do it, that the individual seeking to acquire a first word processor or expand into a new and more capable one faces a difficult choice.

The selection of a word processor is complicated because computer software is not warranted for "fitness for purpose," meaning that once the package is purchased it cannot be returned just because it doesn't accomplish the desired tasks and doesn't reach the necessary objectives. If you buy a system and it doesn't work, you are stuck with it.

As a full time free lance writer, I live with word processing every day, grinding out between 5000 and 8000 pages a year and working ten or more hours a day, seven days a week. For the last four and half years, every word I have written has passed through a word processor, and I have used many software packages on several computer systems, including both S-100 bus machines and an Apple II Plus.

In this article, I shall take a critical look at five popular word processing programs for the Apple. Understand that I am not attempting to categorize any processors as "good" or "bad" or as "better" or "worse" than any others. What I want to show is that there are differences between them and that a given package may or may not be suited

to a particular application or set of circumstances. Every user has to determine the features needed, the types of documents to be processed, the formatting requirements desired, and numerous other considerations based on his own purposes.

I can say that I have never found a perfect word processor—no matter how many features and capabilities a package may have, none has incorporated all the useful features into a single package. In short, don't be surprised if no package exactly fits your needs. You will probably have to make some compromises, and, like me, you might need two or more word processors to cover your range of applications.

Before describing the individual word processors, their features, and their shortcomings, it is useful to summarize the presence or absence of particular functions in a side-by-side tabular format. Table 1 provides such a comparison, showing many common features and identifying their presence with an X in the corresponding column.

This table is not all inclusive, and many of the packages have functions not reflected, sometimes because they are unique to one package. Furthermore, some programs may have some form of a feature shown to be lacking, but such cases usually require steps beyond the ordinary; in other words, the word processor may support the operation indirectly but without easy implementation by the average user or without documentation in the instructions.

Table 2 provides a summary by rating each word processor in seven categories. Within each category, the programs are rated from one to five according to my opinion of their relationship to each other. Of course, this rating system is subjective and is influenced by personal preferences, although an attempt has been made to minimize individual taste.

For example, in rating the relative ease of use, I standardized my test by using the same 26-page document with

HICKORY HILL COMPANY

HIGH TECHNOLOGY REQUIRES HIGH PERFORMANCE ACCESSORIES

In the fast moving, high technology world of microcomputers, the need for high performance accessories often gets overlooked.

Discwasher, recognized as a world leader in audio/video care accessories, understands this need and has developed a line of computer accessories to allow users to get the most from their computer hardware.

The easy-to-use *Discwasher® Disk Drive Cleaner* is both a problem preventer and problem solver. Its dry format safely cleans single or double-sided drives without altering the delicate head alignment or doing possible damage to rubber drive parts with solvents.

The *Discwasher® Computer Cassette Drive CareSet™* is a total maintenance package for your cassette drive system. It includes both the *Discwasher® Computer Cassette Drive Head Cleaner* and the *Computer Cassette Drive Mechanism Cleaner*. Together, these two maintenance units can keep the high resolution heads and the critical drive system of your cassette drive system in optimum performance.

The *Discwasher® DiscKeeper™* is a magnetically shielded storage system for floppy disks that takes up no more space than conventional folder packs. *DiscKeeper* protects against stray magnetic fields which can destroy valuable software. Three *DiscKeeper* sizes provide loss-free storage and protection for transporting any size disk format.

Apple Word Processors, continued...

each processor, seeking the same or similar formatting, and comparing the times required to obtain printouts. It wasn't a perfect test, but it put each word processor through a comparable exercise. Just remember that your preferences may differ from mine and you will have to make your decisions accordingly.

Zardax

Zardax is one of those pleasant surprises that come along occasionally—a nicely designed package that does what is expected of it with minimum difficulty. Provided by Computer Solutions in Australia, *Zardax* is marketed in the United States by Action Research Northwest. Although it is the most expensive of the Apple word processors reviewed here, it is not the most expensive one available.

Overall, *Zardax* is well thought out, and unlike some other products, it doesn't sacrifice useful features to achieve user-friendliness. Too often, software designers go for the marketing buzzwords and special frills that look good in a showroom, but they compromise the usefulness of the product by cutting back on features and commands many users could employ to good advantage. *Zardax* is, however, a balanced product, requiring few compromises by the user.

Tables 1 and 2, show that *Zardax* includes many features. In fact, it is second only to On-Line Systems' *Screen-Writer II* in terms of the number of functions it provides. Yet, operation is simple. Once the program has been configured to the hardware, it requires little more than a fast boot and run to begin preparing a document.

Text entry isn't much different from a standard typewriter, although proper use of the formatting and control commands requires a bit of study and thought. It is also worth noting that text entry and editing are accomplished without the mode switching commonly required in other word processors, making for convenient operation.

Documentation

All features and controls are well documented; the manual is written and organized in a semi-tutorial form. That is, the manual follows a systematic teaching approach while attempting to organize the material as a useful reference. However, the manual is not indexed, so there are occasions when finding specific information is a bit difficult or time consuming.

The *Zardax* program disk includes

sample files that are pre-established practice documents. Despite the number of things that can be done with this package, I felt comfortable using it after only three hours of testing and experimentation.

creative computing SOFTWARE PROFILE

Name: Zardax

Type: Word processor

System: Apple II, IIE 48K

Format: Disk

Language: Machine

Summary: Very powerful, yet simple to use.

Price: \$295

Manufacturer:

Seattle, WA 98146

This article doesn't allow room for a detailed analysis of each function. It is sufficient to know that those listed in the tables do work effectively. Instead of describing the entire word processing procedure, I shall address some of the less obvious requirements and a few things that may prove bothersome to some users.

Hardware

First, *Zardax* works on almost any Apple II system whether it is a minimum configuration or has been equipped with enhancements. It doesn't even need a lowercase adapter because it uses high-resolution graphics for the 40-column mode, though it doesn't employ the compressed text displays available with other programs.

It can also be run with any of several 80-column boards. The supplier specifically names the Vision-80, SmartTerm, DoubleVision, Sup'R'Terminal, and Videoterm as usable display enhancements. However, the Vista *Vision-80* is the board recommended. I performed my testing with a Videx Videoterm, finding it quite satisfactory, although that particular board should be equipped with an alternate character ROM.

If not equipped with either the "inverse character" ROM or a special *Zardax* ROM available from Videx, the Videoterm does not give any visible indication of underlining. Do not purchase an 80-column board for use with *Zardax* until you have seen the board and software in operation together.

You may find that the 40-column display is less satisfactory than the 80-column. This program assumes that all characters affecting the text must be visible on the screen. Therefore, the 40-column mode substitutes a mid-line dot for all spaces, meaning words are separated by dots vertically centered between the top and bottom of the line.

In a way, it is nice to know that a location is occupied by a character, but I dislike the screen clutter and feel it is hard to read, especially for large quantities of text. In the 80-column mode, spaces are blank, and the processor parallels more conventional approaches.

Although *Zardax* functions admirably without an additional RAM card, its performance is enhanced with such a card. A 16K RAM card increases the text held in memory for editing, thereby speeding the editing process. As a practical limit, I found 10 to 12 single-spaced pages was a good working average for a single text file, allowing room for editing, changes, additions and deletions without having to subdivide the file.

Lowercase

Zardax is supplied with a shift-key modification, though it can use modifications other than the one provided. The furnished mod is unusual because it is a two-wire mod consisting of a DIP header (a plug) prewired to two mini test clips. Rather than sticking a wire end into one pin of the gameport socket, a circuit chip is removed from the motherboard, the adapter is plugged into the vacated socket, and the chip is reinstalled into the adapter. The wires connect to two pins of the keyboard "outrigger" on the newer Apples. No soldering is involved; the mini test clips can be attached and removed leaving no evidence of tampering to void the system warranty.

Another nice feature is that *Zardax* supports all operations of Videx Enhancer II, including upper- and lowercase shifting with the SHIFT key, the type-ahead buffer, and both the auto-repeat and fast-repeat keys. This is the only word processor in this article that supports the Enhancer II completely, others ignore that board except for the type-ahead buffer and the auto- and fast-repeat operations.

The modification is simple, requiring that a patching software disk be obtained from the supplier and used to modify the *Zardax* distribution disk. However, the mod is not reversible. Once made, you cannot run the software without the Enhancer II installed. Therefore, it is advisable to modify only one of the two distribution disks, leaving the other ready for use in case there is a failure in the keyboard.

For Heroes Only!

Drawbacks

I could find little to complain about with this package. Naturally, it is not perfect, and there are a few picky little items that bother me, but nothing really major. As I have pointed out, it has a great many features and is easy to learn—an admirable combination.

I did find it a little slow for extensive editing because it only provides cursor movement up or down by one line at a time and left or right by one character at a time. The REPEAT key speeds the process, but I still like to be able to jump by whole words, paragraphs, blocks, and pages.

In linking text files together at print-out, I found that page numbering could be continuous from one to the next, but I couldn't find a way to make defined page headings and footings carry over from file to file. This can be an annoyance because you must redefine and turn the headings and footings on for each text file of a long document—even when they remain unchanged.

One other notable omission is that *Zardax* does not support hyphenation or syllabication. As far as I have been able to determine, there is no way to insert so-called "soft" or "phantom" hyphens that are printed only when they occur at the end of a line. Therefore, there is no way to "pack" justified text to minimize the spacing spread between words, and there is no way to achieve "tight-ragged" right margins in which lines all end within a spread of a few spaces.

As a final note, *Zardax* does support one special feature of importance in technical and scientific work, namely the nonexpandable nonbreakable space. That is a feature usually omitted because programmers discount its importance. It may not sound like much, but most technical or scientific work requires that certain items not be split between two lines.

Examples are numbers and units of measurement such as 10 kg, where the 10 and the kg must be kept together. Other examples include international standard metric numbering which dictates that commas not be used in multi-digit numbers and that spaces be used as digit separators. A number like 59,000 would be written as 59 000, and an ordinary space could be expanded to several spaces during formatting or would allow the 59 on one line and 000 on another. The nonbreak space prevents those things and is, in my mind and for my applications, a critical consideration.

All things considered, *Zardax* leaves me favorably impressed. I can end a day's work with it feeling that I have completed a worthwhile amount of work without hassles or excessive maneuvering to get around software limitations.

Apple Writer II

Apple Computer, Inc., markets a medium-price word processor known as *Apple Writer II*. This word processor has many useful features but is one with which I have developed a love-hate relationship. At any time, I either like or dislike its particular way of doing things. I do have to acknowledge that the occasional irritations are largely matters of personal preference and may or may not affect other users.

There is no question that *Apple Writer II* is a capable word processor, although some of its features are comparatively difficult to understand and apply. For many users, its main advantage is that it runs on a minimum configuration Apple without the extra cost of special hardware support. The program requires 48K RAM and one or more disk drives. It is capable of supporting an 80-column board, but Apple specifically calls for a Sup'R'Terminal (M&R Enterprises). It also works with a Videoterm, but only when a separate "preloader" is purchased for \$11 from Videx. I haven't tested this program with any other 80-column boards, so I can't say whether they work and must advise caution in choosing a board for *Apple Writer II*.

This package does not support plug-in RAM cards or keyboard enhancers, so there is no advantage to adding extra memory. However, there may be some advantage to using a device like the Videx Enhancer II, even though the program won't recognize the shift-key wire.

The benefit results from the fact that

the type-ahead buffer, auto-repeat, and fast-repeat functions of the enhancer do work. Incidentally, the package does not include the shift-key mod, nor does the instruction manual tell you how to install it. Apple only tells you to take the unit to a dealer—they obviously don't encourage such modifications.

Documentation

I feel *Apple Writer II* is one of the more difficult word processors to use well, despite its on-screen help messages. The manual attempts to move from simple to complex operations, but is neither wholly tutorial nor wholly reference oriented. Information tends to be scattered throughout the manual which does not have an index to ease the task of locating specific items.

For the novice, processing text is confused somewhat by the introduction of a special language called a word processing language or WPL. While the WPL provides interesting capabilities such as printing form letters, merging names and addresses, and "boilerplating" text from standard files, it makes it necessary to undertake programming that users might consider undesirable.

There is a matter of philosophy involved, with two common views of what a word processor is and what it should do. On one hand, some users insist a word processor should be simple to use, without special procedures or programming considerations. Such software is readily accepted in office environments where nontechnical personnel must produce documents without delays or extensive training.

ALF COPY SERVICE

FAST • RELIABLE • LOW COST

If you produce software, ALF's disk copying service is the quick, convenient answer to your disk duplication needs. Most orders are shipped in less than a week. Every disk we copy is verified bit by bit and guaranteed 100% flawless. Standard formats include Apple II (including nibble-copy proof and double-boot), Apple III, Atari, IBM, Osborne, and TRS-80.

Our "no frills" pricing means you don't have to buy extras you don't need — set-up charges are \$10 to \$25 per disk to be copied, copying charges are 30¢ to 40¢ per side (minimum: 50 copies).

Of course, we have the frills too — including custom printing and packaging. Call us today for complete details.

We also sell blank disks in bulk pack boxes of 100. All are 5¼", single sided, double density (except Nashua single density), unlabeled, with hub ring. Add \$7 per hundred for sleeves, \$2.50 per hundred for shipping.

Word Processors, continued...

The other view is that the word processor can be as complicated as necessary if it achieves the desired purposes, relying on the user to put forth enough effort to use the software properly. *Apple Writer II* seems to be closer to the second philosophy than the first, and the WPL features with their associated programming do impose a requirement for study and experimentation beyond that of other programs.

Another potential difficulty is that text must be printed from memory rather than from a disk file. This means text must be loaded into memory, with

creative computing SOFTWARE PROFILE

Name: Apple Writer II

Type: Word processor

20525 Mariani Ave.
Cupertino, CA 95014

any file merges, before an on-screen preview or hard-copy printout can be obtained. As far as I have been able to determine, there is a practical limit of about nine single-spaced pages of text that can be held in memory at any time, with elaborate procedures having to be established for sequentially loading and printing long documents.

Features Missing

Other things of interest to some users are missing, at least without some creative manipulations with the WPL. Among these are:

- Block copying. Apparently copying must be done by sequential deletions and retrievals.

- Deletion of a specifically marked text block. It is possible to delete characters, words, parts of paragraphs, or whole paragraphs, but not larger multi-paragraph blocks.

- Overwriting existing text. All changes are made by inserting new text and deleting old text, not by overlaying or overwriting the original.

- Multi-line page headings and footings aren't available—only single lines.

- There are no hyphenation, syllabication, or nonbreak space functions provided.

- A method of on-screen printout preview to gauge page breaks, heading

June 1983 © Creative Computing

placement, and similar formatted appearances is provided, but there is no unformatted draft copy or storing of a formatted text file to disk for later printing or data transmission.

• Justifying text for a flush right margin is limited to inserting whole spaces between words. The program does not provide microspace justification in which spaces are spread in small increments throughout the line. When the printer (typically a letter quality printer) supports such spacing, microspace justification would enhance the appearance of the page.

Still, *Apple Writer II* does not have features and functions not found in the majority of other word processors. The most notable is split-screen editing that allows two sections of a document to be viewed and manipulated at the same time. This is handy when copying or moving text from one location to another and for checking what has been written without leaving the current editing position.

Apple Writer II also has a facility for recovering or "yanking back" a deletion, useful for moving and copying text and in restoring something that may have been deleted by accident. With most other processors, deleting text is absolute and final. *Apple Writer II* also provides a means for using standard Apple DOS commands, allowing manipulation of disk files without leaving the processor.

Summary

Overall, *Apple Writer II* is useful and effective as long as its limitations are recognized. It is a solid program for anyone wishing to devote time and effort to learning to use it for generating "normal" documents such as letters, reports, and similar materials. Yet it is not quite a "maximum feature" word processor and can be difficult to apply to long documents such as book manuscripts or to materials such as technical or scientific manuals requiring extensive formatting techniques.

If you need features such as a split screen or the ability to retrieve deletions, it is one of the few choices open to you without acquiring a different computer system or modifying the Apple II to run CP/M-based word processors.

ScreenWriter II

On-Line Systems' *ScreenWriter II* is a rework and rerelease of *SuperScribe II*. This new version has been enhanced and revised, and the documentation rewritten. In its new form, *ScreenWriter II* consists of three word processors within

the same program. The supplier calls them the Basic Editor, Creative Editor, and Compleat Editor. These aren't three programs but rather three methods of using the same program. With these distinctions, the user can choose the operating level best suited to an application, using basic operations for simple documents like letters and adding more advanced functions as the complexity of the work increases.

Table 1 shows that *ScreenWriter II* has the largest set of features and func-

tions among the processors represented. Yet the table doesn't show all the features available—only the most common ones. I have found no other Apple word processor that approaches *ScreenWriter II* in terms of the number of different things done with keyboard commands.

ScreenWriter II even provides a means of creating alphabetized document indexes and tables of contents, based on entries flagged within the text itself. The only other word processor providing any form of indexing is *Exec-*

GIVE YOUR APPLE® INSTANT RECALL™ FOR JUST \$59.95

Forget what you've heard about computer filing. INSTANT RECALL just made everything easy. No fields, no forms, no formats, no fooling. Nothing to set up before you get started. And, best of all, INSTANT RECALL comes at a no-kidding price of just \$59.95.

Save your notes about everything. Keep track of appointments and important dates. Record minutes of your meetings. Or reminders about customers conferences, expenses, or just about anything! You can mix up as many kinds of information as you want, or you can organize different files on different diskettes. Either way, INSTANT RECALL finds what you've filed the instant you ask, whether or not you remember what's there.

If you've got an Apple II® or Apple II Plus® with at least 48K, one disk drive and Applesoft in ROM, what are you waiting for? To find your nearest dealer or to order, call 800-428-3696 or 317-298-5566 and ask for Operator 360. In Canada, contact Lenbrook Electronics, Markham, Ontario.

CIRCLE 257 ON READER SERVICE CARD

utive Secretary, and that one doesn't work from items in the text.

ScreenWriter II also provides a means of placing footnotes at the bottom of pages, though the use of this feature is subject to some limitations and restrictions. It does not, however, number the footnotes or position the footnote references in the main text—those remain manual operations.

Hardware

This word processor cannot be used with an 80-column board. Instead, it simulates a wide-screen display, allowing a choice of line lengths from 10 to 70 columns and then adjusting the display to larger characters for 40 columns or less or to small graphics characters to more than 40 columns. However, the compressed type for wide displays is difficult to read on a conventional television or color monitor. If you plan to do a great deal of word processing and want to use the compressed form regularly, you would be well advised to purchase a monochrome monitor for readability. Yet even with a monochrome monitor, the compressed form can be fatiguing to read, and it is virtually impossible to distinguish between certain letters like M and N at a quick glance.

ScreenWriter II runs on a minimum configuration Apple, but that is not the most effective way to use the program. First, a single-drive system limits the things you can do, making it difficult or impossible to save and recover file segments, save and load "macros" that re-define keystrokes, create alternate backup copies of long files, or perform certain other operations. For the best utilization of this package, you should have two drives.

Second, *ScreenWriter II* does support added 16K RAM cards (64K total memory). It is not a requirement, but the added memory allows both the editing and printing programs to be loaded at the same time. Without the card, going from the editor to the printer and back again costs valuable time for loading programs as they are needed. With the card, moving from one to the other is almost instantaneous.

Third, *ScreenWriter II* functions best with a buffered keyboard. If a board like the Videx Enhancer II is installed, the upper- and lowercase shift-key operation won't be supported (a single-wire shift-key mod must be installed), but the type-ahead buffer, auto-repeat, and fast-repeat will prove usable and valuable.

Drawbacks

My principal criticism of *ScreenWriter II* is that it is slow. Many of its

operations are time consuming and inhibit a fast typist. While entering text, it is easy to "overtyping" the program and lose characters. I have timed my typing rate on this processor and compared it with the 80 to 90 words a minute I can reach with some programs. With *ScreenWriter II* and no keyboard buffer, I start to lose characters when I reach speeds of 30 to 40 words a minute.

The problem of lost characters becomes acute when attempting to insert new text within the body of a document, especially when using compressed screen displays. There is a considerable slowdown as all following characters are repositioned each time a new character is typed. Even with an Enhancer II installed, I can type an entire paragraph in

creative computing

SOFTWARE PROFILE

Manufacturer:

Sierra On-Line
Sierra On-Line Building
Coarsegold, CA 93614

the time it takes *ScreenWriter II* to insert the first three or four words, and I then have to sit back for a minute or two and allow the program to catch up with the buffer.

To prevent lost characters, a type-ahead buffer is almost mandatory. At least, text can be typed in bursts at normal typing speed, but there is no way around having to allow the program to catch up after typing a sentence or two. But that is still better than having to slow down the typing speed while watching the screen for missing characters.

ScreenWriter II is also slow in loading and saving disk files. It works with a large virtual memory, which is a disk file that handles text in excess of what can be held within RAM. The longer the text being entered or manipulated, the more time is needed to manage the virtual memory during loads and saves.

To illustrate, I set up 11 pages of single-spaced text. Loading the file for editing took 52.2 seconds (read time only). Saving the file took 44.3 seconds to clean up the virtual memory file plus an additional 72.3 seconds to save it

once it had been cleaned up.

There was an interesting program interaction I discovered by accident. In playing around with a package called *Bag of Tricks* from Quality Software, I decided to try their initialization routines on a *ScreenWriter II* data disk.

I won't go into details about the procedure except to say that they provide a routine to "reskew" the sectors of a disk. Quality Software claims that reskewing yields a speed advantage for loading and saving programs but not for text files. Nevertheless, I found that reskewing from the standard Apple 2-descending to a 9-descending pattern did speed the disk operations for *ScreenWriter II*. In fact, it resulted in a 31.6% time reduction for reading a text file, a 49.8% reduction for cleaning up the virtual file, and a 42.6% reduction for writing the final file.

A similar interaction occurred in reskewing data disks for the *Zardax* program—16.7% reduction for loading and a 43.8% reduction for saving. However, it didn't work with the Sof/Sys *Executive Secretary*, and there caused an overall slowdown of 3% to 8%.

Another trouble spot was the *ScreenWriter II* method of hyphenation. While manual or automatic hyphenation is an important feature, this program implements it in such a way that it isn't practical for long documents. There are two methods of placing hyphens. One is to insert "soft" hyphens in the text while writing or editing, but that is not practical because there is no way of telling where line breaks are going to occur without printing the document. Soft hyphens could be inserted by a global search and replace in most or all words exceeding a certain character count, but that is far too time consuming to be worthwhile. *ScreenWriter II* does allow interactive hyphenation at printout but has no memory for hyphens, so the same word may have to be hyphenated again and again throughout a single long document or during each printout of multiple copies. Therefore, hyphenation is practical only for short text requiring few copies.

Once again, users must make some careful choices. In the case of *ScreenWriter II*, it is necessary to choose between the convenience of particular features and the disadvantage of slow speed. When maximum editing and formatting capabilities are needed and speed can be sacrificed, *ScreenWriter II* is a good choice, but when the application is time sensitive, say in a busy office, the delays and slowdowns may be prohibitive.

This is not one of the most user-friendly word processors I have encountered. The division into three

HOT STUFF

You'll find it wherever computergamers go to score the latest and greatest in entertainment software.

The HOT RACK. It's where the "hot" ones are.

You'll find games that'll grab you, thrill you, and hurl you to worlds you never dreamed were possible. Best-

sellers like CHOPLIFTER. CASTLE WOLFENSTEIN. AZTEC. STARBLAZER... and many, many more.

So, stop wasting your time and money on games that could leave you cold. Look for the HOT RACK at your local computer store.

If you don't see it, ask for it.

Dealer inquiries invited.

CIRCLE 211 ON READER SERVICE CARD

Apple Word Processors, continued...

separate styles of processing helps but doesn't eliminate the burden of careful study and experimentation to determine what can or cannot be done. I did observe that the documentation was thorough and detailed, providing all information necessary to implement the functions. The instructions are thoroughly indexed, making it easy to find pertinent descriptions, and they are organized to strike a compromise between a tutorial and a reference manual.

Summary

If it weren't for problems with speed and with the hyphenation feature, I would have no qualms about recommending this package unconditionally. I like the variety of functions and find most of *ScreenWriter II* directly applicable to the bulk of my work. I like features such as indexing and footnoting, being able to recover deleted material (accidental or otherwise), the ability to save and load parts of a document, the ability to save and load parts of a document, the ability to spool a printout for simultaneous editing and printing, and many of the other functions available. But I do feel that *ScreenWriter II* results in an overall loss of time compared with other processors, so I reserve it for applications that must have one or more

of the specific functions. It is certainly not a word processor that can be dismissed out of hand, and everyone should consider it seriously and compare it carefully with other packages before making a final decision.

Executive Secretary and Personal Secretary

Sof/Sys, Inc., markets two word processors, *The Executive Secretary* and *The Personal Secretary*. When the editors of *Creative Computing* asked me to do this article, they requested only that I include *Personal Secretary*. But that word processor is a scaled down version of *Executive Secretary*, and is best described by comparison.

The two are at opposite ends of a scale ranging from simple personal uses to major business applications, with *Personal Secretary* at the low end and *Executive Secretary* at the high end. Where most software developers begin with the simpler version and expand it to a complex program, Sof/Sys went the opposite way. They started with *Executive Secretary* and stripped out functions to arrive at *Personal Secretary*. Thus, the simpler program retains many features

of the complex one, without the oversights and omissions common to packages developed in the simple-to-complex order.

There are some crucial differences extending beyond the prices of \$99.95 for *Personal Secretary*, and \$250 for *Executive Secretary*. Those the supplier mentions are that *Personal Secretary* omits the electronic mail and alphabetical indexing of *Executive Secretary*. Furthermore, *Personal Secretary* has a limited electronic card file (a rudimentary database) handling a maximum of 299 cards or records per file with up to seven fields per card. Meanwhile, *Executive Secretary* handles up to 999 cards per file with a maximum of 13 fields per card.

Hardware

But differences don't stop there. *Executive Secretary* supports 80-column boards including Full-View 80, Videoterm, SmartTerm, Vision-80, and Sup'R'Terminal, as well as a 40-column display with a lowercase adapter. *Personal Secretary* works only with a 40-column display and lowercase adapter chip (Sof/Sys provides one with *Personal Secretary* but not with *Executive Secretary*).

I tried to force *Personal Secretary* into 80-column mode by activating the board

INTRODUCING

PINBALL FOR THE IBM PC

- In the beginning came the onrush of new computer pinball simulations. Then came SubLOGIC's "Night Mission" Pinball by Bruce Artwick.
- And the rush was over.
- Pinball was so beautifully crafted, so physically correct, so "complete" and yet so variable, that it stood out well above the competition.
- This pure example of programming perfection is now available for the IBM PC. More than just a masterful display piece for your Personal Computer, Pinball also remains the ultimate in fun.

On IBM PC 64K disk. Requires the IBM Color/Graphics Monitor Adapter.

QUADRAM™ INAUGURATES THE MERGER OF APPLE AND IBM

Use Apple software in your IBM PC and XT

Who said you can't mix Apples and IBMs? Innovation by Quadram makes it possible with Quadlink™. A simulated Apple computer on a revolutionary new enhancement board. With Quadlink use Apple software in IBM Personal Computers and XTs.

That means most programs designed for the Apple II, Apple II Plus or Apple IIe --including all the educational software and games -- are now compatible with the IBM PC. IBM's sophisticated business capabilities and Apple's educational and entertainment options both in one computer with Quadlink by Quadram.

Easy to use

Quadlink is a board that plugs inside the IBM PC. After it's installed, you're in business. It's like having an Apple 64K computer inside your IBM.

Don't convert or re-format any diskettes. Load the Apple software into the IBM PC and key in one command. That puts you in the Apple

mode. And you're ready to go. When ready to switch back, just press a different key. It's that simple.

Keep the extras

Of course, Quadlink allows use of all IBM enhancements while running Apple software. That means printers, buffers, monitors and more.

When using a monitor with Quadlink there's no plugging and unplugging cables. And Apple programs will appear on an IBM Monochrome or color monitor just as clearly as on Apple's own screen. Even while working with Apple's high resolution color graphics, quality won't be diminished.

Explore your options

Quadlink, essentially a simulated Apple computer, comes standard with 64K memory. Requiring only one expansion slot, it offers a parallel port designed to operate most printers and parallel devices. A serial port for connecting modems, printers and other serial accessories. And a game port for a variety of entertainment options. And

it's both IBM and Apple compatible. There's nothing like Quadlink. And nothing like reliable Quadram Quality to stand behind it.

Beyond the limits

Quadlink by Quadram opens a whole new world of possibilities for IBM PC owners. There's no reason for software limitations any longer. If you like what IBM has to offer but hesitate to give up Apple's educational programs or games, explore Quadlink. And get the best of both worlds.

Quadram Corporation is a division of Intelligent Systems, for over a decade an innovator in personal computer enhancements and color graphics computer peripherals. Quadram products are available only at authorized dealers worldwide.

Visit one and ask for a demonstration of Quadlink by Quadram. Check on our other enhancements too, including Quadboard, the original multifunction board for the IBM PC. We think you'll like what we've discovered.

before entering the processor, but the results weren't satisfactory. Menus and operating instructions were not cleared completely from the screen between functions, and the useability declined.

Both *Executive* and *Personal Secretary* are supplied with single-wire shift-key modifications, including a mini test clip on one end of the wire. This solderless mod requires only that one end of the wire be inserted into gameport socket

creative computing

SOFTWARE PROFILE

Name: Executive Secretary

Type: Word processing and merge/mail programs

System: Apple II 48K

Format: Disk

Language: Machine

Summary: Editing, card file, and electronic mail features standard.

Price: \$250

Manufacturer:

Sof/Sys
4306 Upton Ave. S.
Minneapolis, MN 55410

pin 4, while the other clips onto the keyboard outrigger. This eliminates the danger of damaging equipment by soldering and leaves no evidence of tampering that might void the hardware warranty.

Operationally, the editing, disk handling, and printing functions of *Executive Secretary* and *Personal Secretary* are similar. They enter text, move the cursor, delete text, save and retrieve whole text files, and generally work in the same way. However, *Executive Secretary* can save, retrieve, and link subfiles (portions of larger text), while *Personal Secretary* cannot.

Furthermore, *Executive Secretary* supports global (repeated) search and replace operations, header lines, microspace justification, conditional paging according to lines remaining, and a direct tie-in to the Sof/Sys *Executive Speller*, none of which are available in *Personal Secretary*.

Special Functions

Executive Secretary provides special functions for printing on preprinted forms missing from *Personal Secretary*. Several conditional printing commands of *Executive Secretary* also were deleted for *Personal Secretary*, as well as some of the commands for merging card files into final documents. However, some caution is needed in assuming what is or is not available in *Personal Secretary*.

I found several items, particularly

embedded print-time formatting commands used in *Executive Secretary*, that worked in *Personal Secretary* but were not documented therein. Among these were forcing a new page unconditionally, inserting syllabication for "soft" or "phantom" hyphens, and several other features that make *Personal Secretary* more capable than the instructions indicate.

I even stumbled across an *Executive Secretary* function that worked in my copy of *Personal Secretary* even though the supplier insists it shouldn't, namely a command to widen "binding edge" margins of alternate pages. The command worked in my version, but I was told it shouldn't and would be disabled in later releases. I can only hope that Sof/Sys takes time to update their *Personal Secretary* manual before many more incomplete or erroneous copies are released.

Considering only *Executive Secretary*, the user has access to a capable and well coordinated processor that includes index alphabetizing, card file maintenance and merging, electronic mail features, and other special functions. The program was comparatively easy to use, while being capable of meeting normal formatting requirements.

However, moving into *Executive Secretary* from some other word processor requires some readjustment. There are some things that this package doesn't do quite the way other packages do. For example, while editing, moving the cursor down a line from the bottom of a page or up from the top doesn't bring new information onto the screen. Instead, it jumps to the top or bottom of the existing screen. Bringing up new text requires a separate "paging" command. Similarly, moving the cursor past either end of a line doesn't move up or down a line—it merely jumps to the opposite end of the same line. These actions may be disturbing at first, but they are matters of personal preference and can be used to good advantage.

Alphabetical indexing with *Executive Secretary*, is a sorting feature and can be used as such without actual indexing. The index file is created by typing the entries from the keyboard, not by flagging the items in the text. That file is then sorted and printed in index form. Whether the approach is an advantage or disadvantage depends on the type of document involved. For books, where indexing is done after the material has been typeset and returned in "page proofs," there is little gain from flagging the text files, because changes between manuscript and finished pages often negate any time saving. For manuals and other documents output by the processor in camera-ready form, it would be

preferable to flag the text and have page numbering done automatically.

Card File

I did encounter some problems with the electronic card file. First, the program occasionally goes out to lunch for 10 seconds or so during typing of an entry. It looks like a Basic language pause for a string space cleanup. Without a buffered keyboard, characters are lost and entries must be retyped. Even with a buffered keyboard, uppercase letters are converted to lowercase during the pause, and some retyping is still necessary. My other objection is that only one of the card lines can be searched or sorted in one pass. Sorting on two or more lines requires two or more passes through sequentially developed "indexes."

I prefer the ability to sort and search for several items simultaneously.

Overall, both *Executive Secretary* and *Personal Secretary* are competent word processors, but not for the same applications. I reserve the inexpensive *Personal Secretary* for purely personal documents requiring few fancy operations or formats. I choose *Executive Secretary* for business-oriented operations like mass mailings, formal reports, manuals, and manuscripts.

Making Your Own Selections

This article has become longer than I intended as I have tried to do justice to five word processors. Even so, space restricts the presentation and forces me to ignore or skim over desirable and undesirable features in each package. As the end user, you must perform your own evaluations in the context of what you expect from a word processor. I have merely tried to point out some advantages and disadvantages to get you started.

In selecting any processor, there are things you should not do:

1. Don't buy a processor "blind." Know all you can about the package be-

THE HEAD OF THE CLASS

Give your child the thinking tools that stand in a class by themselves: programs for your home from Computer-Advanced Ideas.

For The Fun Of It

As professional educators and programmers we've been proving for over a decade that motivated learners do best. Featuring full-color graphics, our animated learning games are fun. They talk like a friend, play like a teammate and teach like a tutor. And they stimulate eager young minds.

Partners In Learning

CAI programs come with a library of knowledge for your child to explore. But that's just the beginning. They also feature a unique authoring system that lets you create lessons on any subject, tailoring the program to your child's needs. No knowledge of computers is required. Our programs make sense to *people* — from 4 to 94 — and grow right along with your child.

A Success In Schools

Over 1800 school districts have chosen CAI programs to teach essential vocabulary and logic skills in a full range of topics. Our products get recognition — because they work.

Head Start

Your child's future begins with opportunities you create at home. Choosing resources that are stimulating, challenging and fun can be one of the best decisions you make. Ask your computer retailer for a demonstration of CAI programs and see for yourself how enjoyable a good education can be.

INTRODUCING!

Educational Software That Works

2 disks \$49.95

2 disks \$49.95

2 disks \$69.95

We believe that children have an innate curiosity . . . a natural desire to learn, to discover, to understand. Our software was designed with this in mind. Even traditionally tedious subjects like math, reading, and vocabulary building are easily mastered. Why? Because our software makes children want to learn. And when they want to learn, the results are FANTASTIC!

We know our software WORKS because we developed and tested it in the classroom. Let our software WORK for your children too!

Word Processors, continued...

fore putting your money on the counter. One of the worst mistakes you can make is taking on a word processor without trying it out.

2. Don't rely on sales demonstrations. Most demo programs and presentations show only the best features. Remember, the retailer has to buy the package, so sales personnel may concentrate on trying to resell it regardless of a customer's needs.

3. Don't rely on advertising claims. There is an art to promoting the good and hiding the bad, and many advertisers aren't above padding claims and stretching points.

4. Don't rely totally on published reviews. No reviewer is completely unbiased, and few publishers want to alienate suppliers and advertisers with negative reviews.

5. Don't accept other people's opinions too quickly. Word processing involves personal taste, and what you like may not be what someone else likes.

Those are some things you should not do. Here are some things you should do:

1. Determine exactly what capabilities you need. Identify your "worst case" document styles and formats, and design a test document that includes every problem you expect to encounter.

2. Survey the field. Go through current magazines and find several packages that look good based on advertising, product releases, and reviews.

3. Visit your retailer and ask for demonstrations of each package selected as a possibility. The demos quickly identify the best points.

4. Insist on "hands-on" experience before you buy. Take time to use the word processors to generate a suitable copy of your test document. Don't let sales personnel rush or pressure you, and make sure you have enough time to test every needed function and feature. If the retailer balks, take your business elsewhere.

5. If necessary, buy time at a computer learning center in your area, but first make sure they have the hardware systems you are seeking and the programs you need to try.

6. If you are buying a word processor for use by someone else such as a secretary or typist, be aware of that individual's likes, dislikes, and preferences. It does no good to buy a processor to improve your work output if the person running it can't or won't use it effectively.

In short, proceed cautiously. The time you spend evaluating the word processor could save a great deal of money and time and many headaches later when you have to use the system you have selected. ☐

CIRCLE 198 ON READER SERVICE CARD

Bank Street Writer

Many of you out there in microland have already grown to know and love at least one word processor in your lives. You know, then, that a relationship with a word processor is an experience not unlike a torrid human relationship—with its ups and downs, satisfactions, peeves, elations and disappointments. In many instances, the finality is a break-up, often resulting from the user having

The selection of a word processor is an extremely personal transaction, a marriage of sorts.

become fed up or having found “something better.” I myself recently went through the strain of a change in word processors, and believe me, there were some tense moments.

My feeling toward old document disks is akin to the feeling one might have toward “old flames.” Those disks just won’t work on any current system. And yet there is a lingering and undeniable attachment to the spurned, older formats. Some of the best text of our lives resides there, you know.

Till Crash Do You Part

Similarly, the selection of a word processor is an extremely personal transaction, a marriage of sorts. In all honesty, I have recently shied away from reviewing word processors for that very reason. In this arena, one man’s meat is truly the other man’s poison. I have found things that drive me mad about one system that seem to pose no problem to other users.

John J. Anderson

Conversely, features I find easy to deal with others will tell me are impossible to tolerate. It is enough to render one silent on the topic.

One thing I will readily acknowledge is how pivotally my own writing depends on the process of processing words. I was given the popular label of “underachiever” at more than one point in my early school days, which meant that I was bright but applied myself only to things in which I was interested—I didn’t have much patience for things of a previous moment when my attention had passed to the next. This is surely a poor trait for a writer, though it is often a prevailing one.

Writing, Rewriting, and Kids

Sure, brainstorming can be quite a bit of fun; it is the thinking part of creative writing. But *revision* is the backbone of coherent writing. I am not speaking here of proofreading and necessary correction of typographical errors. I am speaking of revision. Without revision, the Declaration of Independence would lack its crystalline inspiration (“we think these facts are obvious”). Without revision, Tolstoy would probably read like an ad in the subway.

Now let’s bring kids into the equation. Being the underachiever that I was (and probably still am), whatever flair I had for writing was always tinged by my disdain for rewriting. This drag lowered my academic coefficient on all but those papers I cared about passionately enough to actually examine closely and rework. Merely having a typewriter was no help at all. And I know I was not alone in this dilemma. Many of my compatriots had even worse habits. It was a shame. And it need not happen to my kids.

We now know, of course, that a good

word processor makes revision a snap, a pleasure, an obvious component to the writing process. It is a truth we hold to be self-evident.

In the world of word processing today, however, things are rarely easy. With the exception of a very few systems such as Apple’s mouse-based *LisaWrite*, a word processor is going to take substantial time to learn. On the average, I’d guess it takes about 10 hours to begin feeling confident with a given system.

Then there are those systems that seem to require extra user appendages (such as noses) to complete cryptic command codes—the user-hostile category, you might say. What about John Q. Public? How about a word processor for him? How about something that a third-grader can learn and love? If I had had access to a simple, easy to learn, but powerful word processor when I was in third grade, I might have been President by now.

It is of major importance, therefore, to bring word processing to kids in an accessible way. It can revolutionize their entire outlook concerning the sphere of

Bank Street Writer, continued...

reading and writing. It can show them that expressing themselves clearly and well is not only possible, but rewarding.

But what are we to do? Teach seven-year-olds to use *WordStar*? That's simply not feasible. Fortunately, another package has recently appeared; it is so simple, accessible, forthright, and consistent, that kids are begging to write "What I Did on my Summer Vacation" on it, even in the off-season. It is *Bank Street Writer*, from Broderbund Software.

Developed in conjunction with a research and design team from the Bank Street College of Education in Chicago, *Bank Street Writer* was designed to embody the word *simplicity*, and it does so quite admirably. Selecting from screen-based menus with the keys <, >, and the spacebar, the user chooses whether to enter or correct, manipulate, delete or save text.

And although it has been designed for ease of use by children, *Bank Street Writer* is quite capable of producing professional results with any short document. I wouldn't want to use it for a novel, but for ten- or twelve-page re-

**Without revision,
Tolstoy would probably
read like an ad
in the subway.**

ports, it does just fine. Up to 2300 words can be stored in any single text file. Of course, files can be linked, so that larger documents can be stored.

The top of the *Bank Street Writer* screen always displays the choices which are available to the user. Among these are options to delete or undelete, move blocks of text, find and replace character strings, save, kill, rename, or print files. All of these modes can be selected straightforwardly by moving the highlighted bar to the desired choice, then hitting RETURN. It is that simple, and it becomes second nature very quickly.

Below the menu bars is a text box, in which your text appears. Entering text is as simple as, well, entering text. Full cursor control is available using the arrow keys on the Atari, and the I, J, K, and M keys on the Apple. Lowercase is generated through software in the Apple version.

Special cursor control keys are also provided, to move to the beginning or to the end of a text file, or in jumps of 12 lines in either direction.

In addition, other keys allow for

centering of lines and indenting of paragraphs, and indicate how much RAM storage space remains. You can even protect personal files with a password, so that others will not be able to access them from *Bank Street Writer*. (Because text resides in conventional DOS files, however, it is not *too* secure, and perhaps that is good, because kids have a way of forgetting passwords.)

Let's take a closer look at the estimable friendliness of the program.

I have decided, for an example, to move a block of text from one place to another. How to do it? First I move the selector on the top menu portion of the screen to "move." I do that using the <, >, or spacebar. Then I press RETURN. I have now entered the move screen. It prompts me to place the cursor at the beginning of the text to be moved. I do so, then press RETURN again. The move menu prompts me to move the cursor to the end of the block to be moved. I do so, and the text that will be moved is immediately highlighted. The screen prompts me to hit RETURN. I do so, and am prompted to move the cursor to the desired location of the transplanted text block. I do so, then hit RETURN. The text is moved there, and I am asked, "Is it OK to move text here?" If I say no, it will put everything back the way it was. If I say yes, it will effect the move. Even then, I can put things back by using "moveback." Now that's friendly.

If you hold down ESCAPE while the program is loading, the utility program will boot up instead of the word processor. Through this, special disk drive or printer configurations can be custom-tailored. Even optional keyclick is offered, though I can't imagine why you would want it.

Documents can be printed in draft or in final format. In draft format, the document prints out precisely as it appears on the screen, so that corrections can be entered easily and located. In the final print format, the user is guided through a series of questions that will determine the shape of the printout. Here it is determined how many characters will be printed to a line (40 to 126, with a default to 65), along with line spacing, chaining, truncation, and page previewing parameters. A short header line is available, as is page numbering.

Indicative of the friendliness of the package is the polished, five-lesson tutorial that appears on the flip side of the disk. It takes the user painlessly through entering text, cursor movement, erasure and "unerasure," text movement and "moveback," and find and replace functions. The lessons are interactive, and offer to send you back for extra help if you are having difficulty following the instructions.

Bank Street Writer, continued...

The tutorial is well-constructed and handsome to watch. Although it does not render the manual dispensable, it certainly does clearly cover the basic aspects of the program by walking the user through certain operations. I wish we could see more on-line helps of this caliber.

Token Picky Criticism

Unfortunately, the quiz bits of the tutorial are slightly unforgiving, demanding *exact* compliance with questions in

I cannot think of any features I would demand from a \$70 word processor that are missing from this package.

order to advance. I included a period in a certain text alteration and incurred its wrath. It took me a while to figure out the mistake, because I am a dummy. The manual, on the other hand, is utterly unflawed, even for the likes of me.

I cannot think of any features I would demand from a \$70 word processor that are missing from this package. Actually, a few features could have been omitted from *Bank Street Writer*, like the fine tutorial, and \$70 would still be a bargain. If we were to name a category "low-end, easy-to-learn word processors with 40-column or less display," and identified a real need to bring the power of word processing to the student, housewife, and John Q. Public, it wouldn't take long to reach the conclusion that *Bank Street Writer* is the leader of the pack. For the Atari machine, which has until now lacked an easy system, the product is surely a relief. In fact, according to Broderbund, Atari has chosen it for use in its own summer camp program.

Teach Your Children Well

Working with the product is a pleasure, and if that pleasure rubs off on *your* kids, they will undoubtedly do better in school. I remember two-finger typing the wrong letter sometimes in my first writings as a babe, then feverishly straining to alter my sentence to fit the typo. Childish indeed, but to my mind, too much of today's world runs in just that way—bending the intention to match the error. It is a priceless lesson to teach your children otherwise—and *Bank Street Writer* presents an invaluable tool with which to do so. □

Telex: 19-4561 LSA

The Chaplin character licensed by Bubbles, Inc., S.A.

Congratulations. We published your program.

The envelope, please.

There's an acceptance letter inside. And a check that could have your name on it. (If we select your program, that is.)

But remember.

We pick our winners carefully.

Because the software we publish for the IBM Personal Computer has to be good enough to complement IBM Personal Computer hardware. (See the box at right.)

Like our hardware, this software should be simple to use. Friendly. Fast. And written to help satisfy the needs of the individual.

Our Personal Editor is a perfect example. A versatile text file editor, it not only helps the user save time, but lets him easily self-tailor a task with definable function keys. And it sets a standard of excellence.

Of course, every person will use the IBM Personal Computer differently. That's why we plan on publishing many different programs.

Entertainment programs. And educational programs. And business programs. And personal productivity

programs. And graphics. And games.

And more.

We'll also consider software written *by* programmers *for* programmers. For example, the BASIC Program Development System, Professional Editor and Diskette Librarian

IBM PERSONAL COMPUTER SPECIFICATIONS

User Memory 64K-640K bytes	Display Screens Color or monochrome High-resolution 80 characters x 25 lines Upper and lower case	Permanent Memory (ROM) 40K bytes
Microprocessor 16-bit, 8088	Operating Systems DOS, UCSD p-System, CP/M-86+	Color/Graphics <i>Text mode:</i> 16 colors 256 characters and symbols in ROM
Auxiliary Memory 2 optional internal diskette drives, 5 1/4" 160KB/180KB or 320KB/360KB per diskette	Languages BASIC, Pascal, FORTRAN, MACRO Assembler, COBOL	<i>Graphics mode:</i> 4-color resolution: 320h x 200v Black & white resolution: 640h x 200v Simultaneous graphics & text capability
Keyboard 83 keys, 6 ft. cord attaches to system unit 10 function keys 10-key numeric pad	Printer All-points-addressable graphics capability Bidirectional 80 characters/second 18 character styles 9 x 9 character matrix	Communications RS-232-C interface SIDC, Asynchronous, Bisynchronous protocols Up to 9600 bits per second
Diagnostics Power-on self testing Parity checking		

are high-quality, full-function tools that were submitted by authors like you and subsequently published by us.

Now you might have the chance to win.

Who knows? You could open the mailbox and find one of the envelopes shown here.

For information on how to submit your program, if completed and running, write: IBM Personal Computer External Submissions, Dept. 765 PC, Armonk, New York 10504.

The IBM Personal Computer A tool for modern times

Word Juggler

Doug Ford

Word Juggler is an Apple III word processor that stays out of your way as much as possible. It stands out because of its completeness and ease of use.

My first word processor was like a suit that was about a size too small. I was always uncomfortable with it. It always made me feel a little uneasy, irritated me, made me want to get up from the Apple and go somewhere else.

It was designed to accommodate the way computers work, not the way humans work.

Even something as simple as setting margins was a complex process that required frequent use of a poorly done reference book. Commands were remarkably hard to memorize—the key-strokes and command names never seemed to relate to the functions they were supposed to control. The whole thing was overly mechanical, more of a puzzle than a tool.

That first program, and many of the ones that came after it, seemed to have been designed by someone who didn't have the faintest notion how real people would want to use it or how the program could make their work easier and more comfortable.

Useful, well thought out word processors exist, of course, but about the time I

found one for my Apple II that made me feel at home, I bought an Apple III, and the whole process started over again. Luckily, this time it didn't take as long to find *Word Juggler*.

Word Juggler is one of those rare programs that are so good I want to show them off to everyone I know. It bolsters my confidence in the software industry. It is complete and well written, but best of all, it is designed to accommodate human beings.

The program takes advantage of the Apple III redefinable keyboard. The keys on the keypad provide single-stroke editor commands (like find, delete character, delete line, and so forth). The top row of the keyboard provides a complete repertoire of margin, indent, and spacing commands, as well as a long list of other formatting features.

Flexible label strips come with the program to identify the keys. The labels

make it simple to use program functions, but I would hate to try to memorize the commands without them.

The instruction book is complete and well designed. There is a section on installation, a tutorial, a command reference chapter, and a section on data file merging. Five well-marked appendices provide advanced information on backup, file formats, errors (and how to recover from them), a glossary, and that all-too-rare item, an index. We might wish for typesetting in future editions, but why quibble?

Word Juggler works best with a two-drive Apple III (or with a hard disk), but it can be used with a single drive system.

All the program options are numbered and labeled on the Main Menu. You make selections by typing the corresponding number, typing the name of the command (Store), or just the first letter of the command. Pressing only RETURN puts you in the type and edit mode. The ENTER key on the keypad always bring you back to the menu.

Entering Text

To begin a new document, select the New menu option, which clears the screen and places the blinking cursor in the upper left. An inverse line at the bottom always shows the name of the file (if it has a name), the line and character the cursor is on, and the number of free lines still available. (You have over 800 80-character screen lines to work with on a 128K Apple, and nearly 1800 lines on a 256K machine.)

The keyboard is always live; all you need to do is start typing. When the time comes for corrections, the four direction arrows move the cursor to any point in the text. To insert, just type; to delete, use the relabeled minus key on the lower left of the keypad.

Word Juggler provides single key-stroke commands to delete words, lines, and paragraphs, as well as very smooth routines that manipulate large chunks of text, to store, move, copy, delete, or re-insert them.

creative computing

SOFTWARE PROFILE

Name: Word Juggler 2.3

Type: Word processor

System: 128K Apple III, monitor, printer, extra drive (floppy or hard disk)

Format: Disk

Language: Assembly

Summary: First rate, complete humanized

Price: \$295

Manufacturer:

Quark Engineering
1433 Williams, 1102.
Denver, CO 80218.

One of the advantages of word processing is the ability of the computer to find particular words or phrases for you, and to change them on command. With *Word Juggler*, both the find and the change commands are controlled by single keystrokes. You have more change options than usual with this program, including the choice of searching or replacing throughout the text, or just from the cursor position. You can also select whether changes will be done automatically, or one at a time under your supervision.

Printing

Print formatting commands are on the top row of the main keyboard. All print formatting commands begin with the ESCAPE key, then one of the number keys, sometimes with the addition of SHIFT or CONTROL keys. There are single command keys for each of the usual components of page layout: centering, justification, margins, spacing, page length, pause for single sheet loading, and new page.

So much for mundane items. The list of special features is long and ranges from the nice to the genuinely special (outstanding?)—and most are available as labeled, single key commands.

Single, double, and triple spacing are available in a keystroke, as is a software controlled switch from 10 to 12 to 15 characters per inch if you have a printer that can make use of it.

Word Juggler includes a Need command that lets you print groups of lines together, so your title doesn't appear at the bottom of one page and the associated text at the top of the next.

The list of special features is long and ranges from the nice to the genuinely special.

Another good feature not included on many word processors is a command for ragged left, which justifies the right margin and lets the left fall where it may—a technique often used for captions and labels.

If you have an NEC, Qume, or Diablo printer, or one of their electronic act-alikes, you can use superscripts, subscripts, and incremental spacing, a printing technique that gives you

straight left and right margins by slightly varying the distance between the letters on each line. *Word Juggler* also provides special handling for Epson printers, including easy font changes, underlining, double strike, and italics.

Many word processors allow only one line of header or footer information. *Word Juggler* lets you specify up to ten lines of headers and footers, and alter them from within your document. Unfortunately, there is no provision for automatic footnotes.

Other Features

One of the most useful features of the program is its Display Document command. Pressing the decimal point on the keypad instantly provides a fully formatted screen representation of your document, and sideways scrolling lets you see the whole thing, even if you have specified lines that are 254 characters across.

A Display Document command that allows such wide lines is especially useful when you want to preview the effects of merging other files, such as *VisiCalc* spreadsheets, into your documents, and you can sort them before printing. A set of If commands is available if you want to filter out particular records from your data file, or conditionally print portions

Don't let price get in the way of owning a quality printer.

Adding a printer to your computer makes sense. But deciding which printer to add can be tricky. Do you settle for a printer with limited functions and an inexpensive price tag or buy a more versatile printer that costs more than your computer? Neither choice makes sense.

Here's a refreshing option — the new, compact STX-80 printer from Star Micronics. It's the under \$200 printer that's whisper-quiet, prints 60 cps and is ready to run with most popular personal computers.

The STX-80 has deluxe features you would

expect in higher priced models. It prints a full 80 columns of crisp, attractive characters with true descenders, foreign language characters and special symbols. It offers both finely detailed dot-addressable graphics and block graphics.

And, of course, the STX-80 comes with Star Micronics' 180 day warranty (90 days on the print element).

The STX-80 thermal printer from Star Micronics. It combines high performance with a very low price. So now, there is nothing in the way of owning a quality printer.

*Manufacturer's suggested retail price.

CIRCLE 264 ON READER SERVICE CARD

of a document. For large lists, an optional (\$35) utility program that merges files from Apple's *Mail List Manager* is available.

Another item you can purchase separately is *Lexicheck*, a fast, smooth, modifiable spelling checker whose only drawback is that it retails for \$195. *Lexicheck* actually works from within the *Word Juggler* program, so you don't have to stop editing to verify your spelling. When *Lexicheck* is finished examining your text, it returns to the typing mode, ready to continue editing. An additional \$85 buys *Legal Dictionary*, an extension to the *Lexicheck* program that adds 8000 legal terms to the basic 30,000-word *Lexicheck* dictionary.

The Drawbacks

Word Juggler has a few drawbacks, too. For instance, those command templates are a wonderful idea, and avoid the problems associated with memorizing commands—until you lose one of them, as I did on the first day I had the program, or until you move to another Apple III. I ended up making a card with all the commands and carrying it right with the disk until I actually did learn the commands I use most. I recommend that you make paper copies

of it if you plan to use more than one machine.

(Losing that template had a good side to it, too. When I called Quark Engineering I got an immediate, knowledgeable, genial response, and a new set of templates in the mail about three days later.)

Should you want to switch your Epson to graphics mode to drop in a Greek letter, you're out of luck.

The templates don't show all the available commands. Where many keys have three meanings, the templates indicate two at most, and some keys are left completely unidentified. A template showing everything would have been pretty messy, I suspect, but some of the unidentified keys perform important functions such as block move and copy.

It is possible to send special commands to your printer, but they affect an entire line at a time. Should you want to

switch your Epson to graphics mode to drop in a Greek letter, you're out of luck.

I have found only one real irritation in the operation of the program. Suppose you want to break a paragraph into two smaller ones. To tab the text of the second part for a paragraph indentation, you need a three-key combination: the CONTROL key, the SHIFT key, and the TAB key. In an otherwise streamlined, efficient, professional program, an operation that cumbersome is glaringly out of place. It doesn't seem at all unreasonable to expect the tab key to work on its own.

But it has been a long time since I found a business program with only one functional flaw. This one was done right. The menu is there when you want it; your text is never more than a keystroke away; commands are spread out before you on the keyboard; and disk access delays are kept to a minimum. The program never hesitates; and it requires very little memorization. It works the way humans work.

Word Juggler is complete, fast, easy to learn, and comfortable to work with. I hope this kind of quality is the future of micro software. It is a pleasure to use. □

PowerText

Most word processors are made up of two central components—a text editor and a print formatter. The text editor is the part of the package that allows the writer to change, move, insert, delete, and otherwise play with the text of a document that appears on his screen. The print formatter is the part of the package that prepares the document for printing.

In some word processors, the print formatter and the text editor are closely integrated so that what you see on the screen resembles what the printer will print. In packages which do not integrate text editing and print formatting, you can type free form (you do not have to worry about indenting paragraphs, for example), confident that the print formatter will reprocess your text for the printer in the format you intend.

However, what you give up is the ability to see your text on the screen in the format the printer will be using unless you run a separate print-formatting program. When a programmer decides whether or not to integrate text editing and print formatting in his word processor, he determines the appropriateness of his word processor for certain applications. In general, word processors which do not integrate text editing and print formatting are better suited for an office environment. This is true because experienced typists can save time by using free format input, especially if they are accustomed to creating certain standard types of forms.

PowerText is a word processing package that is particularly well tailored for an office environment. In part, this is because it is a combination word processor and style manual. In addition, the care which has gone into enforcing formatting conventions and in designing the menu structure will aid the office employee in using *PowerText* effectively.

The basic premise of *PowerText* is that

Joseph Devlin

all the documents issued from a given office should have a standard appearance. One company memo should look like all other company memos. One report should look like all other reports. This saves secretaries and their bosses from wasting time worrying about where to place commas and choosing between “Very truly yours” and “Yours truly.”

PowerText allows you to store definitions of letters, memos, reports, shipping orders, and other standard forms. Once the format for a particular type of correspondence has been defined, you need not worry about it again. Margins, tabs, page length, headers, footers, closings, and cover pages are automatically formatted according to preset definitions.

Preparation of a Mask

Let's look at the way *PowerText* creates a letter. The first step is the preparation of a letter format mask. When you design the mask, you decide that the date will be positioned at the top right, the address will be three to four lines long on the left, and the closing will be at the bottom right. Once the mask is prepared describing where all the elements of the letter will appear, you can begin typing the letter.

PowerText identifies and locates the elements of the text you type in by responding to the commands you embed in the text. Type /par and the program knows to begin a new paragraph and indent at this point. Type /date and the following line will be placed on the top right of the page. The end result is that *PowerText* is very good for production of documents in strict, established formats.

The advantage of this is that you can rapidly enter text without having to worry about placement of standard paragraph indentations, salutations, and the like. (You may also set non-routine indents within the document itself.)

PowerText is not so good if the writing you do does not follow standard formats, since the creation of a format is a fairly time-consuming procedure, and that time is wasted if the format is to be used only once.

Menus

The *PowerText* editor makes use of nested menus to reach the various commands. Functions are usually invoked through single keystrokes once they have been located on the proper menu. On each level, only certain functions can be performed. This means, for example, that you must exit the Insert mode to perform most other functions such as saving text

creative computing

SOFTWARE PROFILE

Harrison, NY 10528
(914) 967-3504

Four smart ways to make your Atari 400/800, TRS-80 COLOR, VIC-20 and Commodore 64 much more intelligent.

1

The Color Accountant pays for itself. This *complete* personal financial package is designed to make your money easier to manage. Included are:

1. Checkbook Maintenance
2. Chart of Accounts
3. Check Search
4. Income/Expense Statement
5. Net Worth Statement
6. Color Graph Design Package
7. Home Budget Analysis
8. Color Payments Calendar
9. Mailing List
10. Decision Maker

This unique menu-driven package requires less than one hour data input per month. The Color Accountant has over 60 pages of documentation including examples and step-by-step instructions. TRS-80 COLOR requires Ext. Basic and 16K for cassette, 32K for diskette; Atari 400/800 requires 24K for cassette, 32K for diskette; VIC-20 requires 16K Expander. Now available for Commodore 64.

**\$74.95 cassette;
\$79.95 diskette**

2

The Tax Handler makes April 15th just another day. This is the perfect complement to our Color Accountant. The Tax Handler will help prepare your tax returns and probably save you money. Included are:

1. *Form 1040 (Long Form)*—filing status, exemptions, income, income adjustments, computation of tax, tax credits and payments or balance/refund due.
2. *Schedule A (Itemized Deductions)*—medical and dental deductions, taxes, interest expenses, contributions, casualty/theft losses, miscellaneous deductions and summary.
3. *Schedule G (Income Averaging)*—base period income and adjustments, computation of averageable income and computation of tax.

Additional schedules or alterations to the tax codes will be available separately in our monthly magnetic magazines. Atari 400/800 requires 24K for cassette, 32K for diskette. VIC-20 requires 16K Expander. Now available for Commodore 64.

**\$34.95 cassette;
\$39.95 diskette**

3

You'll love your computer with The Magnetic Magazine. Our magnetic magazines will entertain, inform, educate, challenge and delight you. Each issue contains 4 to 7 ready-to-use quality programs, all fully listable. Every issue includes a newsletter containing instructions, tips on programming techniques and a line-by-line examination of the feature program. And starting with issue number 8, the first in a series of tutorials on machine language programming, Database I with a new application every following issue and a new utility in our Utility-of-The-Month section. And word processing is coming soon!

A full year's subscription consists of 10 issues—over 50 programs a year at a mere fraction of their cost. Available for TRS-80 COLOR Ext. Basic, Atari 400/800; all require 16K. Back issues available.

**One year subscription:
\$50.00 cassette;
\$75.00 diskette
Half year subscription:
\$30.00 cassette;
\$45.00 diskette
Sample issue:
\$10.00 cassette;
\$15.00 diskette
VIK VIDEO issue 1 available
for VIC-20; \$12.95 cassette**

4

The Learning Center teaches and enlightens children. Our exceptional educational programs are classroom designed and tested. These unique packages have been invented to introduce 3 to 9 year olds to the ease of computer learning. Through the use of basic concepts such as colors, shapes, numbers and letters, children understand counting, math and language skills. Each program is designed to develop a specific skill, rewarding each correct answer with music and a happy face. Most are compatible with our new Edumate Light Pen \$34.95.

Available for Atari 400/800, VIC-20 and Commodore 64; all require 8K for cassette, 16K for diskette. Also available for Timex/Sinclair 1000 and TI-99.

Please ask about programs available and their prices for Pre-School, Kindergarten and Grades 1 & 2. Prices range from \$8.95 for a single cassette to \$79.95 for a complete set on diskette.

Order now! See your local dealer or order direct. New catalog \$2.00. Visa and MasterCard accepted—please add \$2.00 for postage and handling.

PowerText, continued...

or moving to the top of the file.

Thus, although nested menus are helpful for inexperienced users, they do entail a good deal of overhead. They make performing most of the major editing functions easy, but it can take a while to get to the proper menu for the function you wish to perform.

In each mode in the editor, a prompt line tells you what your most likely options are. You choose each of your actions by depressing a single key. For example, you press I for insert or D for delete. Unfortunately, certain of the more obscure commands are invisible; they are available from certain menus, but are not displayed. Obviously, these commands must be memorized if you plan to employ them regularly.

Another problem is that the same mnemonics have different meanings depending upon which menu you are in. Usually this is a mild annoyance. For example, Q for Quit usually means "go to the primary menu," but in the Edit mode, Quit puts you into a special Edit menu that provides you with other options.

One instance of these multiple-use mnemonics, the use of the escape key, is particularly annoying. Throughout most of the menu system, hitting escape will recall the previous menu. In the Insert mode however, the escape key deletes all

text currently being inserted, then exits to the previous menu.

Features

The *PowerText* editor provides the standard screen editing commands along with some rather nice amenities. All of the common word processor editing and printing features such as subscripting and superscripting, bold and wide printing, underlining, block moves, and search and replace are supported. Footnote numbers can be automatically incremented and subscripted.

Other useful features include buffers that allow you to undelete recently deleted text and allow for complex cut and paste operations. The fact that the program automatically creates a differently named backup file will save you much frustration when you accidentally delete major parts of your current opus. A phrase dictionary allows the definition of up to 26 words or phrases.

PowerText formats disks with ten sectors rather than eight, providing additional storage space on the disk. Thus, the standard single sided disk can store 200K rather than 160K per disk and double sided drives can store 400K rather than 320K.

The formatter adds flexibility as well. Form letters can be easily produced, and

PowerText provides a newspaper style column facility that automatically divides the page into two equal columns. The outline feature will number and indent outline material up to nine levels deep.

It may take a while to create a standard form, but the use of the format results in speedily and correctly printed documents. However, if the standard format is altered, results are less predictable.

You can imbed formatting commands, such as /ind 20I, which indents 20 columns more than the previous indent, free form while in the text editor. However, there is no menu to indicate what format commands are available, and the effect of an imbedded format command can be seen only by quitting the editor, saving the document, then entering the print formatter and calling up the display program. It may take five minutes just to be able to see that an indentation is five spaces too long. If this kind of mistake occurs, the document must be re-edited, then reformatted and examined again.

Documentation

PowerText comes with a thorough, well written manual that would have been much improved if it were better formatted and included an index. The lack of an index is a particular annoyance when trying to remember the commands that do not appear on the menus. Fortunately, Beaman Porter offers a telephone help line manned by friendly experts who can bail you out if you get into trouble.

PowerText has been on the market for the Apple II and III since September of 1981. The version reviewed here is new. It runs on an IBM PC with 64K bytes of memory and two single sided drives. A larger memory and dual sided drives are suggested, however, unless you relish constant disk swapping and like to read out-of-memory messages.

A version of *PowerText* is available for \$199 to users who already own the UCSD P-System. This version comes without the UCSD runtime module, editor and file utility that are included in the full package.

A 90-minute audio tape for training in the use of *PowerText* is available for \$29.95. Beaman Porter promises to make periodical software updates available for a nominal fee. Users who wish to add spelling checking to the word processor can purchase Beaman Porter's *PowerSpell* for \$125.

Summary

PowerText is a comprehensive, full featured word processor that is particularly useful and valuable in offices and other situations in which documents are produced in uniform formats. ☐

IF PERSONAL COMPUTERS ARE FOR EVERYBODY, HOW COME THEY'RE PRICED FOR NOBODY?

A personal computer is supposed to be a computer for persons. Not just wealthy persons. Or whiz-kid persons. Or privileged persons.

But person persons.

In other words, all the persons whom Apple, IBM, and Radio Shack seem to have forgotten about (including, most likely, you).

But that's okay. Because now you can get a high-powered home computer without taking out a second mortgage on your home.

It's the Commodore 64. We're not talking about a low-priced computer that can barely retain a phone number. We're talking about a memory of 64K. Which means it can perform tasks most

\$1395*
APPLE® IIe 64K

\$999*
TRS-80® III 16K

\$1355*
IBM® PC 64K

other home computers can't. Including some of those that cost a lot more. (Take another look at the three computers above.)

By itself, the Commodore 64 is all the computer you'll ever need. Yet, if you do want to expand its capabilities some day, you can do so by adding a full complement of Commodore peripherals. Such as disk drives. Modems. And printers.

You can also play terrific games on the Commodore 64. Many of which

will be far more challenging than those you could ever play on a game machine alone. And as great as all this sounds, what's even greater-sounding

is the price. It's hundreds of dollars less than that of our nearest competitor.

So while other companies are trying to take advantage of the computer revolution, it seems to us they're really taking advantage of something else:

Their customers.

*Manufacturers' suggested list prices as of March 20, 1983. Monitor included with TRS-80 III only. Commodore Business Machines, P.O. Box 500R, Conshohocken, PA 19428; Canada—3370 Pharmacy Avenue, Agincourt, Ont., Can. M1W 2K4.

CompuServe is the versatile, easy to use interactive videotex service designed especially for the personal computer user. It's dynamic, growing and changing daily to satisfy its subscribers' needs. It's an industry leader, created and managed by the same communications professionals who provide business information and network services to over one fourth of the FORTUNE 500 companies.

From current events to current assets, CompuServe offers a wealth of useful, profitable or just plain interesting information. Electronic magazines and national news wires plus worldwide weather, current movie reviews, electronic banking and shop at home services, and some of the most sophisticated financial information available are all offered to current subscribers.

From words to music. CompuServe offers a communications network that gives special

interest groups from hardware enthusiasts to computer composers a chance to get together. There's a bulletin board for selling, swapping, and personal notices and a CB simulator for real-time communications between subscribers. There's electronic mail, the fastest, surest, way to communicate with other users across the street or across the country, plus file retention and editing, and lots, lots more.

Fun and games are expected whenever computer users interact, and CompuServe has the best. Games you can play alone or with other CompuServe subscribers anywhere in the country. Classic puzzlers, sports and adventure games, and fantastic space games featuring MegaWars, the "ultimate computer conflict."

But, that's just the tip of the chip. CompuServe offers a menu of thousands of items that make subscribing educational, fun and sometimes downright profitable. CIRCLE 293 ON READER SERVICE CARD

Perfect Writer

A standard cliché for reviewers of word processing software is to claim that "Soft-Star Super Perfect Word-Master Letter-Writer" (substitute your favorite name) is so easy to learn that "I wrote this review in the first hour I used it." Somehow such claims never ring true. Any word processor sophisticated enough to handle the needs of today's users deserves careful study.

Because Computer Services Corp. of America states in its full-page display ads that its *Perfect Writer* is simple enough for unskilled users, I had hoped to learn it quickly. I wanted to exercise my imperative as a reviewer to use the software to write this evaluation. After all, I can turn a cliché with the best of them. It automatically footnotes; I wanted to provide you with some pithy postscripts. It can format verse; I wanted to paeon *Perfect-Writer* poetically.

Alas, it was not to be. Though *Perfect Writer* is easy enough to learn, mastery requires considerable time and practice. Installing the program on your computer can be difficult. For my machine it was impossible. While ultimately I found *Perfect Writer* to be a superb work, the finest total microcomputer software package I have yet encountered, I cannot recommend it without several strong reservations.

Advanced Features

At the outset let me say that I am impressed. This is a significant product—a major achievement in microcomputer software. The advanced features of *Perfect Writer* belie its modest price. For \$289 you get a well integrated series of programs that incorporates an editor, draft printer, fancy print formatter, and a set of configuration programs that fit the

Bud Stolker

programs to any large-scale CP/M-compatible computer. You get a series of lesson files, some for beginners and some for advanced users, that set a standard of excellence other software authors would be wise to study. A padded silk-screened binder with integral pocket encloses a 325-page typeset user's manual and a separate, illustrated command summary printed on sturdy card stock.

When the author says the user's guide is free of jargon and arcane "computerese," he's not kidding. His step-by-step explanations, supported by dozens of illustrations and diagrams, instruct the user in plain, concise English that makes studying this book a pleasure.

The package includes a document design program that can invoke over 30 predefined formats (business letter salutations, indented quotations, itemized lists, etc.), providing total control over text output, either according to your specifications or its own default instructions. *Perfect Writer* can automatically create a table of contents that lists and numbers chapters, sections and subsections, headings, paragraphs, and appendices. It even includes page numbers in the contents. Further, it can generate an alphabetized index of words and topics, complete with page numbers. It can insert footnotes anywhere in a document that you specify, renumbering them automatically as you add new ones. You can refer to items mentioned previously in the text, and *Perfect Writer* will automatically calculate the page on which they appear, and insert the page reference for you.

All these features are standard equipment. Optional extras for *Perfect Writer* include a spelling checker, a mailing list system, and a file manager that can sort,

merge, and extract data in a variety of formats. Each of these additional products is \$189.

The company is willing to support its customers and its software, judging by my brief conversations with a support specialist, and in any case offers a money-back guarantee if you are not completely satisfied. What more could you possibly want?

Two things that I want come to mind immediately. One is a computer with enough memory and disk storage to satisfy the need of *Perfect Writer* for lots of room. The other is a dealer or resident technician to install the program on my dream computer. The *Perfect Writer* advertisement does not specify what size machine is required to run this software. Nor was the technician I phoned sure, although he seemed otherwise knowledgeable. As it turned out, my 48K Vector Graphic computer is too small for *Perfect*

creative computing

Perfect Writer, continued...

Writer, though the technician claimed to have heard "scattered reports" of 48K machines running the software. A more realistic minimum is a genuine 56K machine (some CP/Ms reclaim several kilobytes for their own use; these won't do) and dual disk drives with at least 150K storage disk—250K per disk is preferable. That is more muscle than my own machine, with a mere 180K of storage on two disk drives, can muster.

Unaware that *Perfect Writer* was too big for my machine, I encountered considerable frustration trying to get the program to run. I wound up using a friend's much larger computer to evaluate *Perfect Writer*. Yet even with Gerry's expertise as a savvy senior software engineer and his intimate knowledge of his own system, we had trouble configuring the software. More on that later.

Comfortable to Use

Within an hour of sitting down at the terminal, I was comfortable with most of the cursor controls. Within five hours I had methodically plowed through the lesson files and tried every command at least once. By the end of a long day I was able to sling text from file to file like a pro. Interestingly, I found two days later that I had forgotten most of the commands—a classic case of too much too soon.

Although the documentation referred to an on-screen help file, none ever appeared. Nor could I find such a file in the disk directory. This was a minor oversight, and presumably by now a "help" command is part of the package. That would be a big help to beginners like me, though using *Perfect Writer* should become second nature with practice. The command structure is logical and consistent. The editor offers satisfactory prompting for the more complex operations, as long as you know how to enter the higher level command modes in the first place.

Popular word processors like *WordStar* and *Electric Pencil* frequently favor a compass arrangement for cursor control: the "east" key moves the cursor right; the "north" key moves the cursor up, and so forth. *Perfect Writer*, on the other hand, assigns the most commonly used instructions mnemonically: control-F for forward one character, control-B for backward. The next higher level of commands employs the same mnemonics, but uses the escape key for so-called "Meta" commands: Escape-F moves the cursor forward one word; escape-B goes back a word. Commands used even less frequently require both an escape and a control character.

In this regard *Perfect Writer* bears a strong resemblance to EMACS, a venerable screen editor developed at MIT in the early 1970's. The EMACS design phi-

losophy has merit even today, despite the extra keystrokes sometimes required. Multiple key commands that broaden the repertoire of available functions adapt well to computers with definable keys. With *Perfect Writer* it is easy to configure any key to deliver any command.

Flexibility and Safety

The function- and level-oriented mnemonics, while requiring the user more or less to memorize commands, also provide for greater flexibility and safety. Because less frequently used (and more potentially damaging) commands require a multiple command sequence, you are less likely to blow an entire editing session with an injudicious keystroke. Many is the file I have lost while using *Electric Pencil I* by typing a control-O ("exit to operating system and destroy buffer") at the wrong time. Quitting *Perfect Writer* requires a control-X, control-C; then a final verification that you do, indeed, intend to end the session.

Other control-X sequences signal other major operations, such as opening and closing files, entering and leaving split-screen windows, and moving text between files. You can even lock out the edit commands so that you can review the text without fear of inadvertently changing it.

At every critical point, *Perfect Writer* prompts you for verification. The editor reserves two lines at the bottom of the screen for command prompts and status information. With such a sophisticated editor, this feature is not only desirable but necessary. The ability of *Perfect Writer* to manipulate text files is awesome, and it is possible to blunder on a grand scale. The author of the program wisely provides several ways to make a graceful recovery from gross errors, allowing you to recall text that you have deleted, to cancel the last command entered, or if all else fails, to abandon your temporary text buffers and try again with the original files.

When it comes to managing files, *Perfect Writer* takes an unconventional yet elegant approach. A "virtual memory" scheme enables you to work on files larger than the memory capacity of your machine. It simply swaps data between disk and memory when it thinks you are not looking. If you haven't typed anything for several seconds, the editor briefly flashes a "swapping" message and activates the disk drive. While this sounds like a perfect way to lose characters by typing while the disk drive is running, I found that the swap process works very well indeed. Unless you start to type in the split second that the drive first acti-

Console screen provides a separate window on two different documents.

Is 42 seconds worth \$10000?

The new Transtar 130 daisy wheel printer generates a full-page letter in 78 seconds. The least expensive 40 cps printer does it in 36. Only 42 seconds difference...for twice the price.

At only \$895, the Transtar 130 letter-quality printer makes speed its only compromise. Shannon-text rated at 16 cps, the Transtar 130 gives you better printing quality than any 40 cps printer. It allows you the full range of word-processing functions such as proportional spacing, superscript, subscript, under-scoring and a true boldface. The 130 is "plug and go" compatible with the best-

selling word processing packages. It's quiet: only 65dB. It's durable. It boasts a unique new autoloader feature that automatically loads paper to one of four pre-selected positions with the touch of a button. And, as if that weren't enough, its end-user warranty runs a full six months—twice that of most of its competitors.

Affordable and loaded with all the features of printers costing twice as much, the Transtar 130 letter-quality printer retails for less than \$900. But it's up to you: Is 42 seconds really worth \$10000?

Transtar

Box C-96975, Bellevue, Washington 98009

CIRCLE 301 ON READER SERVICE CARD

Perfect Writer, continued...

vates, *Perfect Writer* can handle your keystrokes and interleave its own disk file maintenance. Try as I might, I was unable to drop more than a character or two, and even that required fast reflexes. I was working with a fast 8" disk system, however. Swapping could be an annoyance on slower 5-1/4" drives. The delay time between last keystroke and start of disk file maintenance is easily adjustable to suit your preference.

You can access up to seven lengthy text files at a time, and display portions of any two of them in split screen windows whose sizes you can adjust as you move text around. The split screen enables you to move a sentence, or several chapters for that matter, from one file to another. Simply mark the beginning and end of the text, "delete" it into a buffer file, point to the spot in the other file at which you want to insert it, and "yank" it back from the buffer. With paragraphs it is even easier, since *Perfect Writer* recognizes paragraphs as basic units of text. Place the cursor anywhere in the paragraph, and *Perfect Writer* automatically figures out how much text should be moved.

A typical command sequence for moving a paragraph to a different file (escape-H, control-W, control-X, O, control-Y) is straightforward, though it sounds complicated. True, you'd better pay full attention to opening both files, setting up the split screen text window, and marking the appropriate text in both files. But consider the alternatives. You could merge the two files (assuming you had enough working space), delete the excess data, edit and then save an updated file. Or you could extract the information, kill the excess, merge it with the new file, edit and save the new file, and delete what

was left from memory. Then you might want to load in the old file, erase the text that you have lifted, and resave that file.

You get the picture. *Perfect Writer* can save a great deal of work. It operates with ease in situations that show up the shortcomings of less powerful software. With a high-capacity disk system, say half a megabyte or more, each of the seven open text files can be larger than 64K, the practical limit of random access memory in 8-bit machines. And you don't need to know or care how the computer manages all that information. Advanced file-handling routines do the work without a crash, without a complaint, without even a dropped character.

Installation A Problem

So why am I so hesitant to recommend *Perfect Writer*? For one thing, it can be difficult or impossible to install without considerable effort and research. For another, its rich command vocabulary makes it more complicated for the casual user than a less flexible word processor. And it works efficiently only on the largest CP/M systems.

Installing the screen editor and file handler can be quite simple if you are using a standard terminal. The chatty and helpful configuration program explains the process, offers a comprehensive list of terminals that it "knows," tests the cursor control features you select, and then sets up a file that takes into account your preference in screen formatting and disk file management.

Gerry and I found a bug in the Heathkit terminal installation. The Heath option that we selected tested out correctly, but when we tried to run the program, the main menu appeared on the screen and immediately erased itself. Because the

installation program allows you to edit any command for any terminal, we had no trouble changing "clear screen" to "clear to end of screen." That solved the problem. A user who is not technically oriented might have had trouble, though, since the installation program does not test for this particular feature. It tests for everything else, and therefore can lull you into a false sense of security.

And that's one trouble with *Perfect Writer*. It is advertised as easy to use. The ads say "you're off and running in no time." Not so. You had better know your system—and CP/M—thoroughly before trying to install these programs. Printer configuration is the really hard part. We tried to set up *Perfect Writer* to use Gerry's Spinwriter, one of the standard machines supported by the Perfect Printer module. The first time we tried to bring up the printer, Gerry's Votrax speech synthesizer spoke up instead. Several hours later, after poring through the manual and trying repeatedly to make the Spinwriter print, we gave up for the night.

The following evening we set up the Spinwriter as a "vanilla" printer: one with no underlining, boldfacing, proportional spacing or other fancy features. That made it easy to patch in. The printer worked impressively, even though we were using slow, inefficient, and unsophisticated CP/M printer output routine (the "list device"). The *Perfect Writer* print module gave us several unexpected features in this mode. It was smart enough to back over text and retype characters when necessary for boldface, underlining, and italics. It reserved whole extra lines into which to drop superscripts and subscripts. The ability of this clever software to maximize the capabilities of a dumb machine is a real bonus for people with inexpensive printers.

Not For The Faint of Heart

Heartened, we again tried to select the special Spinwriter driver routine for high speed output with all the extra Spinwriter features. Again we failed. Gerry found the problem. The *Perfect Writer* people neglected to take into account one of the most sophisticated features of the printer: a special printer status line can be hardwired to the computer to make the Spinwriter perform at maximum efficiency. *Perfect Writer* doesn't support this.

We could have fixed the problem by tearing apart the printer and flipping switches on a hidden circuit board. Then the printer would have been able to use a software status routine. We couldn't make this change because we didn't have the extra-cost Spinwriter service manual with all the necessary information. In any case, such a job is not for the faint of heart.

This difficult installation process is the

How to chart your company's fortune without spending one

It's a fact. A single chart or graph can tell you instantly what it takes hours to interpret from printouts or other raw data.

Now, with Strobe Graphics Plotters and Software, you can create superb hardcopy graphics directly from your computer. And you can do it for a fraction of the cost of most other systems.

The Strobe System transforms complex data into dynamic, colorful visuals with a few simple commands from your computer. Charts and transparencies that once took hours to produce are plotted within minutes. Information can be presented as bar charts, pie charts, curves or isometrics using a variety of colors, character styles and symbols. And with a resolution of 500 points per inch, the Strobe plotters match or surpass the quality of plotters costing thousands of dollars more.

You can also save and modify your graphics through Strobe's menu-driven programs. A broad selection of software—including programs that plot directly from VisiCalc* and Supercalc** files—is now available.

When the Strobe Graphics System is interfaced to your computer, an 8½x11 inch sheet of paper can speak anyone's language—visually. Visit your local dealer and learn how to start charting your fortunes today. Because a perspective on the present can also be your window on the future.

The game that puts space games in perspective. Zaxxon™, one of the most popular arcade games of 1982, is now available for use with your home computer system.

Zaxxon™ technology and creativity present a 3-dimensional-like playfield which sets Zaxxon™ apart from other computer games.

Zaxxon™ looks and sounds like aircraft flight, and players can soar to new levels of

home computer entertainment. From the daring attack on the enemy's floating fortress and the blazing battle against the enemy's fighter fleet to the final showdown with the deadly armored robot, Zaxxon™ challenges the skill and imagination of every player at every level of skill.

Imagine yourself the pilot, attacking the enemy fortress—climbing, diving, strafing to score points and extra fuel. The enemy fights back with a barrage of missiles and gunfire. Then you face a fleet of enemy fighters in a gripping dogfight of altitude strategy and flying skill. Survive this battle and the enemy's fortress, defended with laser barriers, then you've earned the ultimate challenge; a blazing confrontation with the pow-

erful robot, armed with a lethal homing missile.

Zaxxon™ is the one game that you must see to believe. You have to play it to feel its impact. If you're ready to face the challenge, check with your local software dealer or send check or money order with \$2.00 postage/handling. California residents add 6½% sales tax. Available on cassette or diskette. Suggested retail price \$39.95.

Available in January on Atari®, February on Apple® and Radio Shack® Color, and April on TI 99/4A™ and NEC 6000™.

Perfect Writer, continued...

weakest link of *Perfect Writer*. While the publishers have assembled a superb total package, they have made a critical marketing error in ignoring or understanding the complexity of the installation process.

Computer Services Corporation has targeted its ads to the new cadre of non-computer people who can effectively use *Perfect Writer*: small business owners, managers, authors, grantsmen, pool typists. The manual is written for naive users who need know nothing about CP/M or their computer. The price is attractive, but for \$289 retail price, what dealer in his right mind is going to spend several hours installing a custom version of *Perfect Writer*? And what alternative does that leave the unskilled end user except to go find a capable software engineer like Gerry, or return the package for a refund?

I strongly recommend that *Perfect Writer* be installed by a dealer. Only the most dedicated computer users or those with common system configurations should attempt to patch in *Perfect Writer* without professional support.

I further believe that *Perfect Writer* is for use only by folks with the most brawny CP/M systems. At least 56K, high-density disk storage, and an 80-character video display are all musts. I got far enough into the installation process on my own machine to see how *Perfect Writer* performs on an older 16-line by 64-column screen: not well. The last few items in the main menu appear only temporarily before being erased by the initial command prompt.

A 40-character Apple screen would not support this menu at all. Anything less than a full 24-line display would suffer, too, because of the need to display two (and sometimes three) status lines on screen in addition to your main text and perhaps a second text window as well.

To be sure, the blame for our installation woes cannot fall squarely on the shoulders of the *Perfect Writer* people. They have carried the configuration programs to a level of extreme simplicity. Still, it is not enough. Certainly the software author can not be held accountable for the fact that every CP/M system is a little different. And it is certainly not his problem that my Vector with its memory-limiting ROMs doesn't have the guts for such powerful programs, though he certainly could have told me what hardware his program requires.

Complicated But Bug-Free

Despite these problems, I think the program itself is terrific. It is the best of its type, bar none. And lo and behold, the editor itself seems completely bug-free. It is not for everyone. The command structure requires some study and requires

more keystrokes than other text editors. Whether or not you need such a complex system is a personal decision. It is a little too complicated for writing grocery lists.

I can wholeheartedly recommend *Perfect Writer* for people who want its power and flexibility, and who have adequate machines on which to run it. Today that means CP/M-compatible systems. But the real strength of the program lies in its transportability to larger 16-bit computers, such as the IBM PC, that can tap its full potential. A Unix-type version is

inevitable, I suppose, and that should be a piece of software to be spoken of in reverential tones.

When today's hardware catches up with the kind of software foreshadowed by *Perfect Writer*, perhaps microcomputers will have truly arrived as powerful silent partners that quietly do our bidding, enhancing our efforts and amplifying our achievements. Certainly *Perfect Writer* points the way. □

SOFTWARE PROFILE

Name: The Gutenberg Word Processor

Type: Word processor

System: 48K Apple II, Apple IIe with shift key modification, and Apple III in emulation mode

Supported Printers: Centronics 737/739, Epson MX-80FT/MX-100, NEC 8023A, Apple Dot Matrix Printer, and Qume Sprint 5 and 9

Format: Disk

Language: Machine language

Price: \$315 U.S.; \$375 Canadian

Summary: An excellent word processor

Manufacturer:

Micromation Limited
1 Yorkdale Rd., Suite 486
Toronto, Ontario
Canada M6A 3A1

I had seen *The Gutenberg Word Processor* demonstrated at one of the local computer stores, and decided that I had to have it. After all, who wouldn't want a program that allowed her to design her own fonts, print graphics in with the text, write in multiple columns, do headers, footers, super- and subscripts, and a host of other things? I don't know who wouldn't, but I certainly did! So, I ordered the Apple version of *Gutenberg* from Canada.

Within the week, *Gutenberg* was on my doorstep. Handsomely packaged in a slipcase and padded binder were three disks and the documentation. The docu-

Patricia D. Glenn

mentation! It had been printed on a dot matrix printer and was beautiful. Right on the title page it said: "This manual was printed on a Centronics 739 printer. Input was generated using an Apple II personal computer. This manual was produced entirely using the *Gutenberg Word Processor*. Page make-up and positioning of text and headings was achieved with the *Gutenberg* composition print program. No "cut and paste" to position text was performed. All large headings were created with the *Gutenberg* paint program."

Learning to use Gutenberg from the documentation almost drove me wild.

I leafed through the manual. Oh, wow! Graphics! Boldface double size headings! Page numbers! Custom type fonts! Columns! Tables! I was thrilled.

Gutenberg comes with a tutorial disk, and after a closer look at the documentation I knew I would need it. Unfortunately, the documentation is *not* one of the strong points of this program. In fact, the documentation is probably the main factor that keeps *Gutenberg* from being the most useful word processor ever written.

The Documentation

Since the user's manual is the weakest

link in what is probably destined to be a classic word processor, let's discuss it now and be done with it. The manual was written by the program author, John Wagner. Mr. Wagner makes certain assumptions about the qualifications of the reader and proceeds from there. These assumptions are not always valid.

While he gives detailed instructions for beginning to use the system, he does *not* tell you why you are doing things. This leaves you in the position of proceeding by rote with no understanding of the reasoning behind the process. To say that this is frustrating is an understatement. I must admit that learning to use *Gutenberg* from the documentation almost drove me wild.

The problem is not in the portion that explains editing. That is easily understood and easily implemented. In fact, editing with *Gutenberg* is a joy. The program is responsive and easy to use. I found the editing portion very easy to learn. My problems began when I went into the print portion of the program. With study and concentration and by working through the examples, *Gutenberg* can be learned, but the documentation offers very little help. After several days of practicing with the program, I suddenly understood what I was supposed to be doing. Others may not have this problem, but I do think it takes dedication to learn to use *Gutenberg*.

A redeeming feature of the documentation is that it is easy to find the information you need. The table of contents will lead you to the portion of the text that tells you what you need to know. I called Micromation in Canada to discuss the documentation, and they assured me the manual is being re-written by professional educators and will be more complete. It will also be indexed.

Smith-Corona makes a good deal better. With a \$50-rebate.

The Smith-Corona® TP-I™ daisy wheel printer with optional tractor feed.

Ever since the Smith-Corona TP-I was introduced, it's been a great success with critics and users. And it's been a good deal at its low price.

Now, it's a better deal than ever. Because now you can get this high-quality, low-cost printer for even less.

Buy a Smith-Corona TP-I letter-quality printer any time between June 1 and July 31, and Smith-Corona will send you a \$50 refund.

Of course, what you'll be getting is more than a good deal. Because the Smith-Corona TP-I is a printer with the same excellent print quality as found on the finest office typewriters.

The TP-I handles letter and legal sized paper. And with the new tractor feed option, the TP-I can handle both fanfold and single sheet paper—without ever having to remove the tractor feed!

The TP-I is very simple to operate. It's compatible with most personal and home computers and available with either standard serial or parallel data interface. And, unlike many printers, the

TP-I is made in America.

There's a choice of state-of-the-art daisy wheels to give you a wide variety of fonts. (At \$7.95 each, you can easily afford several.)

So if you're in the market for a high-quality, low-cost daisy wheel printer, get the Smith-Corona TP-I. Get it now and make a good deal a good deal better—with a \$50 rebate.

Please send me more information on the Smith-Corona TP-I daisy wheel printer.

The Tutorial Disk

Micromation seems to be aware that *Gutenberg* can be difficult to learn simply by reading about it, so they have included a tutorial on disk. This tutorial disk makes it extremely easy to learn the basic editing commands. The disk also includes a selection of ready to use formats for those who are eager to get on with using the program and reluctant to spend time learning how to use the formatting mode. These formats can be copied onto your file disk and used as is. If you examine the pre-programmed formats and their results carefully, in time you will begin to understand how formatting works. Take heart—*Gutenberg* can be learned.

Features

One of the reasons it is so difficult for the documentation to teach *Gutenberg* is that *Gutenberg* has so many features. This program does things that you probably never expected a word processor for a microcomputer to do. Features of the program include:

- Word wrap
- File insertion
- Block moves
- Copy blocks
- Global search
- Search and replace
- Centering
- Automatic pagination in either Roman or Arabic numerals
- Justification
- Proportional and micro-spacing if supported by your printer
- Underlining—both single and double if supported by your printer
- Boldface printing
- Sub- and superscript

- Multiple column formatting if supported by your printer
- Kerning
- Floating accents
- Alternate character sets
- Mixed text and graphics if supported by your printer
- File length of about 117K
- Phantom hyphen
- File merging
- Form letter capability
- Macros for often used commands, words, or phrases
- Headers
- Footers
- Paragraph, block, and hanging indents
- Just about any kind of format you can dream up. If you can express it using

Gutenberg virtually eliminates the necessity for "cut and paste" in any text processing operation.

the Print program commands, *Gutenberg* can do it.

Inserted casually in the list above are some features you are unlikely to find in any word or text processor currently available. An example of one of the unique features of *Gutenberg* is the Paint Program. This is an Etch-a-Sketch type graphics program. It allows you to draw illustrations to accompany your text. So what? So it also allows you to save these illustrations and insert them in their proper place within the text. Of course, the Paint Program works only with dot matrix printers, but this is hardly a dis-

advantage. Since the illustrations are drawn dot-by-dot, you can have drawings of a truly satisfying complexity. *Gutenberg* will also accept graphics drawn under Apple DOS.

Another useful feature of *Gutenberg* is its ability to redefine character sets. If, for instance, you were writing in Russian, with the Graphics Program you could redefine 115 of the ASCII values to allow you to print directly in Cyrillic. Any alternate character sets available to your dot matrix printer can be used directly, as can any foreign language daisy wheels you may need, simply by redefining the normal ASCII character set. Since *Gutenberg* is a Canadian program, the normal character set provides the accented French letters.

Since mathematics, too, is a language, it should be pointed out that the user-definable character sets also extend to mathematical symbols. Thus, a mathematician can use *Gutenberg* and a dot matrix printer to output text without the need to laboriously insert mathematical formulae by hand. Due to its unique characteristics, *Gutenberg* virtually eliminates the necessity for "cut and paste" in any text processing operation.

To call *Gutenberg* a word processor is not strictly accurate. It is, rather, a text processor. If your only need is to write a few letters, then *Gutenberg* would not be the program for you to buy. If, however, you have text that includes tables, or that could benefit from having graphics embedded in the text, or that needs a special foreign language font then *Gutenberg* is definitely your program.

User Support

User support is readily provided by Micromation. They are knowledgeable about their product and eager to answer any questions you may have. The program is copy-protected, but a backup copy is provided, and provision is made to copy the master disk. If the master disk becomes defective within 90 days of purchase, Micromation will replace it free of charge. After the warranty period, a replacement costs less than \$20. In all, I feel this is a more than reasonable answer to the problem of copy protection.

Summary

Gutenberg is a fairly expensive program that proves the adage "You get what you pay for." It has useful features that cannot be found in any other program. It is somewhat difficult to learn, but well worth the effort. *Gutenberg* defies description in a short review, so I can only suggest that you go to your dealer and ask for a demonstration. It is a program I recommend highly. □

The Home Accountant.TM

The #1 best-seller.

Any home finance package will balance your checkbook. But to become the #1 best-seller you've got to be something special.

The Home AccountantTM is.

It's the only one that prints a net worth statement and a personal finance statement. So you know exactly where you stand financially every day of the year. It will even print your checks, automatically.

Not only that, The Home AccountantTM lets you label every transaction. Just imagine sitting down to do your taxes and having every penny you've spent and earned neatly listed by category—and available at the touch of a button. It's an incredible time-saver.

You can also create bar, line and trend analysis graphs for every category—in color. It's great for realistic budgeting.

Sound amazing? Wait, there's more.

Let's say you write a check to pay your Visa. The Home AccountantTM automatically debits your checking account and credits your Visa account.

And it does this with every one of the two hundred* budget categories: credit cards, checking accounts, money markets, cash, rent checks, insurance payments—you customize your own financial package.

Check out The Home AccountantTM soon. You'll find it does a lot more than simply manage your money.

It manages your money simply.

*The Home AccountantTM is available for the Apple II/IBM Personal Computer/Atari 400/800 Computers/Osborne/TRS 80 Model III/Commodore VIC 64. The actual budget capacities will vary with each computer.

Quark introduces

A deceptively simple solution to your word processing dilemma.

If you're serious about word processing on your Apple*IIe, you may be bewildered by the sheer number of programs available. And a tad perplexed by their claims and promises. After all, a glamorous package that says "easy to use," may not even be easy to open.

The dilemma is real. And Quark is happy to provide the solution.

A proven program for serious word processing.

Quark's new Word Juggler IIe turns your computer into a dedicated word processor. You get the extraordinary ease of use, sophisticated capabilities and straightforward documentation that make our original Word Juggler a best seller on the Apple III.

For example, there's virtually nothing to memorize. Because principal editing functions are identified on a unique keyboard template

— and nineteen, easy-to-install, replacement keycaps.

Changing keys is quick and simple, too. Just slide our special keycap remover over the key — twist — and pull. Your new keycaps can be in place in less than two minutes.

A flexible tool to increase your productivity.

But don't be deceived by Word Juggler IIe's disarming simplicity. The program packs the powerful features you need to quickly perform the most complex editing tasks.

Characters, words, even entire paragraphs can be deleted with a single keystroke. There are search and replace keys. Block move and copy keys. And you always have instant control over page length, margins and any other formatting parameters.

Document display and print out are easy, also. One keystroke displays your document on the screen. Another prints it. And whether

Word Juggler™ IIe.

you need to print only specific pages, multiple copies, or even documents too large to fit in memory, Word Juggler IIe can easily accommodate you.

A clever way to foil Mr. Murphy.

Even the best of us occasionally forgets when “i” does not come before “e” — and even the most agile fingers can press the wrong key. So you should also give serious consideration to Quark's new Lexicheck™ IIe — a spelling checker with a highly compressed, 50,000 word dictionary.

Accessed from within the word processor, this program lets you virtually eliminate typographical errors and common misspellings. Lexicheck IIe will scan your document at up to 8,000 wpm — then highlight, in context, the first occurrence of any word it does not recognize.

If the word is correct, as in the case of industry jargon or abbreviations, you can simply add it to your personal dictionary. If the word is actually misspelled, you can swiftly correct it.

A lot more.

These are only some of the ways Word Juggler IIe and Lexicheck IIe can help solve your word processing dilemma. Your Quark dealer has even more details, as well as complete information on our line of office automation tools for the Apple III.

Ask for a demonstration today.

GEAP Tricks

creative computing SOFTWARE PROFILE

Name: Newsript 7.0
Type: Word processor
System: 48K TRS-80 Model I, III
Format: Disk
Language: Hybrid
Summary: Among the best for the TRS-80
Price: \$124.95
Manufacturer:
Prosoft Software
Box 839
North Hollywood, CA 91603
(213) 764-3131

If you have any interest in a word processor and even if you already have one, you should read this review. *Newsript 7.0* is, without a doubt, the most powerful and most convenient word processor available for the TRS-80. It has features that rival dedicated word processing systems and is underpriced at \$124.95. *Newsript* gives mainframe power on your micro, and I challenge anyone to find an equal to *Newsript*, even at a higher price.

Chuck Tesler and the people at Prosoft Software were among the first to see that no really powerful word processor was available for the TRS-80. Chuck wanted something along the lines of the mainframe processor he was so familiar with. When no such program appeared

Richard C. McGarvey

on the market, Chuck called on almost 20 years of experience to produce one. The result of his work is *Newsript*, and the newest version is the culmination of a great deal of programming effort on the part of Chuck and his son, Glen.

They have responded to user input and created version 7.0 which is designed to customize itself to almost any DOS and is able to use the special features of almost every major printer on

***It is the first time,
to my knowledge,
that software producers
have interfaced their
products with others
to build a solid
software system.***

the market. Read on and you will see why I think *Newsript* is the TRS-80 word processing package.

Speed

Some reviews have left the impression that *Newsript* is a Basic language word processor and is, therefore, slow in operation. That just isn't so. *Newsript* is primarily machine language and uses

Basic only in areas where speed is not necessary.

While it is true that *Newsript* takes a few extra seconds to transfer files between edit and script modes, I feel that it is worth the wait. It is because the edit and script functions are not co-resident that *Newsript* can put so much power into available memory. Version 7.0 is unbelievably fast and has eliminated the slower routines used in earlier versions.

Owners of older versions of *Newsript* can purchase updates which include the faster routines. Speed has been increased in several areas. Now ENTER takes the cursor to the next line. SHIFT/ENTER updates the text, and it is fast. The control key has been changed so that it need not be held down. Striking the CLEAR key locks the control for one key stroke. This saves finger stretching. See the Help command printout (Figure 2) for more command changes and short cuts.

I will not dwell on this point any longer. If someone tells you that *Newsript* is slow or clumsy you can bet that he hasn't really used it. Anyone who has spent 30 minutes with *Newsript*, especially version 7.0, will tell you that it is a fine program. A few hours will have him praising *Newsript* as the best program ever.

Using The Program

Part of the ability of *Newsript* to do more than the other TRS-80 word processors is a result of its two part system. Part one is the Edit program with which text files are created. Edit also allows the use of special control codes that

Richard C. McGarvey, 221 Hirschfield Dr.,
Williamsville, NY 14221.

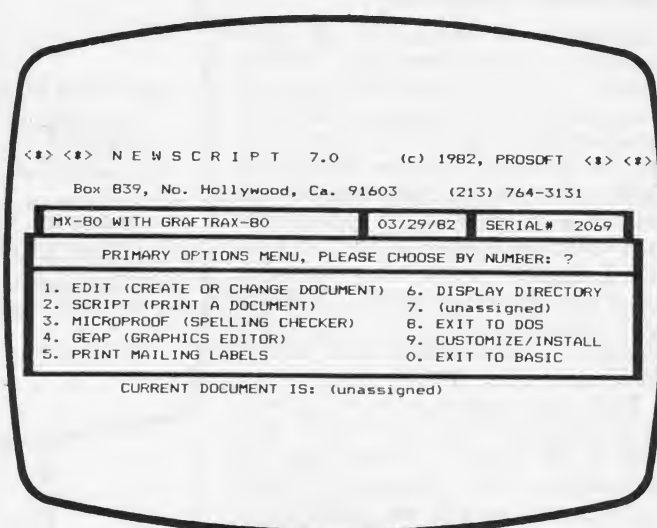

Figure 2. Newscrip command summary as displayed by HELP command from the edit mode.

Figure 3. Newscrip Primary Options Menu.

tell the second part, Script, which features to include in the printout. Script then takes the text and prints it out with all the special features included.

The Primary Options Menu

One of the best features of *Newscrip* is the ease with which its power can be implemented. This is reflected by the Primary Options Menu (see Figure 3). As soon as *Newscrip* is loaded, the main menu appears. You can then select the option needed with the press of a button.

The first thing to note is the top line of the menu. It contains the type of printer you have selected during setup, the date of the version you have and your serial number. All of this is important to have handy.

Now let's take a quick look at the menu options. First is the Edit option. Selecting number one takes you directly into Edit so that you can edit an old document or create a new one. Selection number two brings up Script so that a previously created document can be printed immediately.

Options three, four and five show how *Newscrip* has been integrated with top quality software from other software producers. Option three selects *Microproof*, a spelling checker program. If you have *Microproof* or *Electric Webster* from Cornucopia Software, you will really appreciate this option. *Newscrip* and *Electric Webster* are fully integrated.

Selection four deserves a special look also. GEAP is the Graphics Editor and Programmer produced by J.F. Consulting. Its purpose is to allow you to create graphics and text combinations for video display or printout to the Epson and similar printers. The program was interfaced with *Newscrip* to take advantage of the ability of *Newscrip* to stop printing, pull in and print an outside file, and

then continue with the text. The result is that logos, charts, graphs and the like can be created by GEAP, saved in the *Newscrip* format, and then mixed into the text. Figure 5 is a GEAP-created logo that can be printed by *Newscrip* at any time and at any location on the page. The GEAP option also allows you to load Dotprint, the high resolution expansion module which is also part of GEAP. With Dotprint, you can edit a file in *Newscrip* and then print it in special character fonts with Dotprint.

This approach to programming is unique. It is the first time, to my knowledge, that software producers have interfaced their products with others to build a solid software system. Prosoft, J.F. Consulting, and Cornucopia Software, should be congratulated on their successful effort. I hope other software producers get the idea and apply the same approach.

Option number five is the mailing label option. It is a separate package from Prosoft available at additional cost. It is straightforward, versatile, and easy to use.

Option number six is a handy item. When in the menu you can look at the directory of any disk. The directory is displayed with a number beside each entry. When a number is selected, that file becomes the default and the user is then returned to the menu with the selected file name in the CURRENT DOCUMENT IS: line at the bottom of the menu. After the selected file has been accepted by *Newscrip* as the default file, it can be Edited or Scripted without retyping the name.

Menu selections seven, eight, and zero are straightforward. Seven is unused at this time. Eight exits to DOS READY and zero exits to Basic. Item nine is an essential part of *Newscrip*. The

customize/install option is the way you tell *Newscrip* which DOS and printer you are using. You can also select track access rate, repeat key rate and others. Figure 4 shows the printer, DOS and printer interface select menus as they appear on the screen during customize/install.

There have been some recent changes in the customize/install option that will be of interest. First, the option has been moved out of the main program and into a separate file. This means that it no longer takes up disk space when not being used. Keep it on the original disk but remove it from the working disk. Then, if you need it later, load it from the original disk. I won't list each of the new options available during the Customize/Install routine. It is enough to say that they give almost total control to the user.

Once the user has made the proper selections, the *Newscrip* disk is updated so that it contains the necessary information for proper operation on your system. On the initial power-up of the *Newscrip* disk, you are prompted for system information. On subsequent power-ups, *Newscrip* assumes that the same system is being used unless menu option nine is selected and new information is supplied.

Printer Support

As of this writing, *Newscrip* fully supports the special features on more than 25 printers. Figure 4 shows the list of printers whose special features are supported. If your printer is not in this list, please call Prosoft because new printers are constantly being added to the list. Also, if your printer is not here, it doesn't mean that you can't use *Newscrip*. I have a Radio Shack LPVI, among others, and I didn't expect

Newscript, continued...

Newscript to be able to use the fonts available to that printer, but I tried it anyway. To my surprise, *Newscript* used the expanded and compressed fonts as if it were made for the LPVI. Another feature of *Newscript*, one that permits the definition of graphic characters, allowed me to use the graphic and special symbols which are available to the LPVI but not displayable on the video. Note that all of the figures and graphics included with this review, with the exception of Figure 1, were created with GEAP, *Newscript* and the MX-80 printer.

Full, right justified proportional print is an example of *Newscript* support. Several of the popular printers have the proportional print capability but when the printer is placed into proportional mode it is impossible to get right justification. *Newscript* allows the use of proportional print, and, unlike other word processors, it places the necessary spacing *within* the words so that conspicuous between-word spaces are no longer obvious. Figure 1 is an example of the LPIV (Centronics 737) proportional print as used with *Newscript*. In the same figure, I have used varied print fonts so that you can see how fonts can be mixed in the same line without destroying the justification.

To use these features, simply precede the object text with the special start control codes and *Newscript* does the rest. Placing stop control codes at the end of the object text returns the printout to the previous mode. The special feature codes can be used in combination so that you can select, for example, italics that are boldface, expanded, and underlined. There are limitations, but they exist in your printer, not in *Newscript*.

Other special features include underlining, double width, italics, superscript, subscript, boldface, backspace (overstrike), multiple fonts (10, 12 and 16 characters per inch and proportional print). If you place a control code in your text that your printer does not support (i.e., superscript on the Epson MX-80), *Newscript* simply ignores the code, so it does not affect your text.

Figure 5. This logo, created with GEAP, can be printed by *Newscript* at any time and in any location within a text file.

Graphics and Special Characters

Now a quick look at the graphics of *Newscript*. The control key plus 7, 8, 4, 5, 1, or 2 causes a graphic element to be lit. If you look at your keypad you will notice that these numbers are arranged in the same position as the graphic ele-

ments. When you use this graphic keypad, the cursor does not advance. In this way you can set the elements you want and then move on. The keys work in a toggle fashion, with the first strike turning on the element and the next turning it off. You can also print characters that are not on the keyboard. The bell on the Epson (CHR\$(7)) is an example.

I know that graphics are not everyone's cup of tea. You may not even care if you can use the special features of your printer. But isn't it good to know that there is a software package that is so well thought out and so well written, that it allows you to use all of the features if you want?

Special Features

A detailed account of the special features available in *Newscript* would be much too long for this publication. In

Electronic Communications Made simple for The Apple®:

Transpaks™ From SSM.

SSM Transpaks give you all the modem hardware and Transend™ software you need to connect your Apple II/IIe® to the world of electronic communications.

Public information services. Transend Software lets your Apple do the walking.

Transpak 1 connects your Apple to other Apples, to mainframe systems, or to public information networks. In fact, all Transpaks include valuable subscription offers to three time-saving information services: THE SOURCESM, Dow Jones News/Retrieval®, and DIALOG's Knowledge IndexSM.

THE SOURCE provides instant access to SourceMail business and UPI world news, stock reports, government activity, and private newsletters—even shopping at discount prices.

Dow Jones News/Retrieval keeps you current with the latest corporate news, stock prices, sports statistics, economic surveys, and exclusive news and information from *The Wall Street Journal*, *Barron's*, and *The Dow Jones News Service*.

The Knowledge Index instantly locates articles, reports or books from an electronic library of over 10,000 journals. You can request information on practically any topic, and in seconds the Knowledge Index will direct you to pertinent articles.

SSM Transpaks will help you do more:

Electronic mail. Transend software gets it there in seconds.

Transpak 2 insures that information you exchange with other Apples will arrive intact. You can send and receive important documents or files of any size over any distance with complete confidence.

With Transpak 3 and a clock card, your unattended Apple can send electronic mail *automatically* to up to 100 other unattended Apples anywhere in the world, at any hour. You'll save time and phone costs by exchanging information at night when rates are lowest.

Each Transpak includes the SSM 300-baud Apple-Modem Card™ with convenient auto-dial/auto-answer capabilities. For the fastest communication available on the Apple, SSM's Transpak 2+ or Transpak 3+ features the SSM TransModem 1200—a 300/1200-baud stand-alone modem.

Choose your Transpak and get started today.

Each Transpak includes all the communications software and hardware you need in one simple package. Your SSM dealer can help you select the Transpak that's right for you. SSM guarantees your satisfaction or your money back.

	Software	Hardware
Transpak 1	Transend 1 Terminal Emulator	300-baud Modem Card
Transpak 2	Transend 2 Electronic File Transfer	300-baud Modem Card
Transpak 3	Transend 3 Unattended Electronic Mail	300-baud Modem Card
Transpak 2+	Transend 2	TransModem 1200 with serial interface and cable
Transpak 3+	Transend 3	TransModem 1200 with serial interface and cable

Newscrip, continued...

this section, I will briefly mention some of the special features available.

The first thing to consider is text manipulation. *Newscrip* allows several versions of delete and insert. They include the deletion and insertion of blocks, lines (any number), words, and characters. Text can also be located, changed, or altered. Block moves are also possible and are much easier than with *Script*. In addition, it is possible to copy a block so that it can be repeated elsewhere in text without retyping. Screen dumps of text are also accomplished easily.

Next I will briefly say that justification is fully supported. You can justify right or left or turn off the justification. You can also control concatenation.

Now consider command control. Most commands are entered on the command (top) line of the display. Only enough of the command to make it unique is needed. Many of these same commands can be entered directly from the text areas using the control key and the appropriate command key. Many of the control commands, such as insert character, are toggled. They use the same key to turn them on and off, and they stay in effect until cancelled.

Multiple Commands

Multiple command selection is next. Many of the commands that can be applied to text in the edit mode are also options in the script printout mode. For example, consider .DS, which stands for double space. If the whole document is to be double spaced, you can select the DS print option when in Script. If only portions of the document are to be double spaced, the .DS can be placed on a

This paragraph shows the right justified
Proportional print along with subscript
and superscript, I have also intermixed
expanded fonts so that you can see
how they look. You should also note that the line
length was set to 40 characters so that it would
reprint in the magazine without taking up too much
room! Have you noticed that the between word gaps
are missing? That's the intra-word justification!

Figure 1.

line during the edit phase and the print-out will default to single space until the DS is hit. Then double space will start and continue until cancelled.

Titles, headers and footers are common needs. Top titles, bottom titles, headers, footers, and page numbering can all be easily controlled to allow printing on odd numbered, even numbered, or every page.

Line spacing and page formatting include the following features among others. In Script, double and triple space options are presented at print time. In Edit, you can set double space, single space, space half lines, skip n lines if not at top of page, space n lines, force page, conditional force page, start new print

line, and start new paragraph (spacing selectable).

File handling is one of the most powerful features in *Newscrip*. With .AP filespec as the last line in one file, the stated filespec is pulled in, on completion of the original file, and the new file is printed to the pre-set options. These files can be appended endlessly and the .ST code will stop the printing and await the change of a disk. You can also imbed a filespec (.IM) which causes *Newscrip* to stop, pull in the specified file, print it, and then return to where it left off in the original file. You can use this feature to call often used text, such as your own address.

Additional features include .RD which

DISASTER INSURANCE.

PROTECT YOUR HARDWARE FROM THE UNEXPECTED.

Not to mention the unavoidable pollutants in the air. Performance robbing dust, grime, spills and static electricity.

Cover Craft Dust Covers help extend the useful life of your computer equipment at a fraction of the cost. Perhaps that's why more people throughout the world rely on Cover Craft Dust Covers than any other brand.

CIRCLE 134 ON READER SERVICE CARD

The new COMPAQ Portable Computer. IBM compatibility to go.

Simple, isn't it? The COMPAQ™ Portable Computer can do what the IBM® Personal Computer does. To go.

It runs all the popular programs written for the IBM. It works with the same printers and other peripherals. It even accepts the same optional expansion electronics that give it additional capabilities and functionality.

There's really only one big difference. The COMPAQ Computer is designed to travel.

Carry the COMPAQ Computer from office to office. Carry it home on the weekend. Or take it on business trips.

If you're a consultant, take it to your client's office.

If you use a portable typewriter, you can use the COMPAQ Computer as a portable word processor instead.

If your company already uses the IBM Personal Computer, add the COMPAQ

you'd probably need to buy an additional display screen because the built-in screen is too small for certain tasks, like word processing. The COMPAQ Computer's display screen is nine inches diagonally, big enough for any job, and it shows a full 80 characters across. And the built-in display offers high-resolution graphics and text characters on the same screen.

The bottom line is this. The COMPAQ Computer is the first uncompromising portable computer. It delivers all the advantages of portability

In the standard configuration, the COMPAQ Computer has three open slots for functional expansion electronics as your needs and applications grow. It accepts standard network and communications interfaces including ETHERNET™ and OMNINET™.

If you're considering a personal computer, there's a new question you need to ask yourself. Why buy a com-

puter that isn't portable?

For more information on the COMPAQ Portable Computer and the location of the Authorized Dealer nearest you, write us. COMPAQ Computer Corporation, 20333 FM149, Houston, Texas 77070. Or call 1-800-231-9966.

without trading off any computing power capability.

And what do those advantages cost?

Nothing.

The COMPAQ Portable sells for hundreds less than a comparably equipped IBM or APPLE® III. Standard features include 128K bytes of internal memory and a 320K-byte disk drive, both of which are extra-cost options on the IBM. Memory and additional disk drive upgrades are available options to double those capacities.

Portable as a mobile unit that can use the same programs, the same data disks, and even the same user manuals.

There are more programs available for the COMPAQ Computer than for any other portable. More, in fact, than for most non-portables. You can buy them in hundreds of computer stores nationwide, and they run as is, right off the shelf.

With most other portables

CIRCLE 139 ON READER SERVICE CARD

There is a word that describes your choices in flexible disks today. That word is "ordinary." The woods seem to be full of offerings of middling quality, neither good nor bad, not necessarily cheap but not overly expensive for the most part, products that are just so-so, just average, just...well, just ordinary.

But now there's a new word in flexible disks. Ultra Magnetics. A word that redefines the state-of-the-art in flexible disk price performance rather than reinforcing the current state-of-the-marketplace. By itself, *Ultra* means "extra ordinary." And by itself is where you'll place the Ultra Magnetics product when you have a chance to compare it to others.

The superb engineering and meticulous manufacturing of each Ultra Magnetics disk clearly shows. A proprietary jacket provides more consistent jacket dimensions and lower torque that result in better auto-loading and longer life. A special lubricant built into each disk surface enhances both disk and head durability. And

100% surface testing of each and every Ultra Magnetics disk ensures the highest data reliability. Our Ultra Magnetics product line currently includes single- and double-sided 5.25-inch disks. Soon, it will feature 8-inch disks as well. For a fact, they are more expensive than some of the garden variety alternatives. But considering the performance and the reliability, Ultra Magnetics is a surprisingly attractive value.

Here's the bottom line. You no longer have to put up with what you may have sadly come to expect from flexible disks. And we encourage you to take the next logical step from the usual to the remarkable—from the ordinary to the extraordinary. Call your local supplies distributor and ask for Ultra Magnetics.

EXTRA ORDINARY

ULTRA Diskettes

Now...Diskettes you can swear by, not swear at.

Lucky for you, the diskette buyer, there are many diskette brands to choose from. Some brands are good, some not as good, and some you wouldn't think of trusting with even one byte of your valuable data. Sadly, some manufacturers have put their profit motive ahead of creating quality products. This has resulted in an abundance of low quality but rather expensive diskettes in the marketplace.

A NEW COMPANY WAS NEEDED AND STARTED

Fortunately, other people in the diskette industry recognized that making ultra-high quality diskettes required the best and newest manufacturing equipment as well as the best people to operate this equipment. Since most manufacturers seemed satisfied to give you only the everyday quality now available, an assemblage of quality conscious individuals decided to start a new company to give you a new and better diskette. They called this product the *Ultra* diskette, and you're going to love them. Now you have a product you can swear by, not swear at.

HOW THEY MADE THE BEST DISKETTES EVEN BETTER

The management of *Ultra* Magnetics then hired all the top brains in the diskette industry to make the *Ultra* product. Then these top bananas (sometimes called floppy freaks) created a new standard of diskette quality and reliability. To learn the "manufacturing secrets" of the top diskette makers, they've also hired the remaining "magnetic media moguls" from competitors such as Verbatim, Memorex, Dysan and many more. Then all these top-dollar engineers, physicists, research scientists and production experts (if they've missed you, send in your resume to *Ultra*) were given one directive...to pool all their manufacturing know-how and create a new, better diskette.

HOW ULTRA DISKETTES ARE MANUFACTURED

The *Ultra* Magnetics crew then assembled the newest, totally quality monitored, automated production line in the industry. We know that some of *Ultra*'s competitors are still making magnetic media on equipment that is old enough to vote. Since all manufacturing equipment at *Ultra* is new, it's easy for *Ultra* to consistently make better diskettes. You can always be assured of ultra-tight tolerances and superb dependability when you use *Ultra*. If all this manufacturing mumbo-jumbo doesn't impress you, we're sure that at least one of these other benefits from using *Ultra* diskettes will:

1. TOTAL SURFACE TESTING - For maximum reliability, and to lessen the likelihood of disk errors, all diskettes must be totally surface tested. At *Ultra*, each diskette is 100% surface tested. *Ultra* is so picky in their testing, they even test the tracks that are in between the regular tracks.

2. COMPLETE LINE OF PRODUCTS - For a diskette to be useful to you and your computer, it must be compatible physically. *Ultra* Magnetics has an entire line of 5 1/4-inch and 8-inch diskettes.

3. SPECIALLY LUBRICATED DISK - *Ultra* uses a special oxide lubricant which is added to the base media in the production of their diskettes. This gives you a better disk drive head to media contact and longer head and disk life.

4. HIGH TEMPERATURE/LOW-MARRING JACKET - A unique high temperature and low-marring vinyl jacket allows use of their product where other diskettes won't work. This special jacket is more rigid than other diskettes and helps eliminate dust on the jacket.

5. REINFORCED HUB RINGS - Standard on all *Ultra* mini-disks, to strengthen the center hub hole. This increases the life of the disk to save you money and increase overall diskette reliability.

6. DISK DURABILITY - *Ultra* disks will beat all industry standards for reliability at well over millions and millions of revolutions. They are compatible with all industry specifications as established by ANSI, ECMA, ISO and JIS.

7. CUSTOMER ORIENTED PACKAGING - All *Ultra* disks are packaged 10 disks to a carton and 10 cartons to a case. The economy bulk pack is packaged 100 disks to a case without envelopes or labels.

8. LIFETIME WARRANTY - If all else fails, remember, all disks made by *Ultra* Magnetics, (except bulk pack) have a lifetime warranty. If your *Ultra* disks fail to meet factory specifications, *Ultra* Magnetics will replace them under the terms of their warranty.

9. SUPERB VALUE - With *Ultra*'s automated production line, high-quality, error-free disks are yours without high cost.

CIRCLE 315 ON READER SERVICE CARD

THE PERSONAL PRINTER BUILT LIKE A SHERMAN TANK PERFORMS LIKE A STRADIVARIUS.

A Tough Act To Follow. Frankly, an Okidata printer is the best printer on the market today. Why? We pack more performance features per dollar into our dot matrix printers than anybody. Bar none. Data processing at speeds from 80 to an incredible 350 characters per second. Exceptional letter quality printing at three times the speed of most daisywheels. Draft and color printing. High resolution all points addressable graphics for charts, graphs, illustrations and photos. Even alternate character sets for self-designed typefaces and symbols. (Print a G-clef, if you like.)

Long-Term Engagement. Our high performers are the most reliable printers available, with rugged steel

frames, laser-welded parts, and a print head (the most vital part of all) so strong we guarantee it for up to one full year. No wonder our warranty claim rate leads the industry at less than 1%.

Perfect Harmony With Your Computer. Every Okidata printer works in concert with the major names in personal computers. Better and faster, in fact, than the major computer name printers. (Which, by the way, aren't even made by the major computer companies.)

Best Selection. Right Price. Nobody offers you a better choice. There are eight Okidata printers in all, ranging in price from \$449 to \$2995, suggested retail. Suggest you call CIRCLE 232 ON READER SERVICE CARD

1-800-OKIDATA (in NJ, 609-235-2600) to find the dealer nearest you. You'll get more for your money from your personal printer. Not to mention your personal computer.

OKIDATA

A subsidiary of Oki Electric Industry Company Ltd.

Newscrip, continued...

reads in a form letter address, .TC, which indicates text to be saved for the table of contents and .IX which labels key words for the index.

The .KE code is especially useful. When Script hits this code (which can be inserted anywhere) it stops and awaits text input directly from the keyboard. Up to a full line can be entered and that line, escape codes and all, is then processed as any other text. This allows the update of items that change from printing such as names, prices, dates and the like.

Form letters seem to be of interest to many people, so I'll spend a paragraph explaining a bit about them. There are several *Newscrip* commands that aid in the creation of form letters. The first is .RD which stands for read. If you create a mailing list using the editor, you can then use .RD to get those addresses one at a time. The file can also contain salutations so that you can personalize the letter. When the .RD command is hit, the next address in the file is pulled in and printed, thus putting a new address on each letter.

Special Characters and Codes

It is possible to create not only graphic characters, but also special characters and codes to be printed. You can enter the hexadecimal value for the graphic or special character and that code will be sent to the printer. With this option you can print symbols on the printer that you can't print on the screen.

To see how the document will look, you must print it.

Miscellaneous commands include comment lines, which are similar to REM lines in Basic and allow you to make notes to yourself in your text. They are ignored by all processing. Darkness or boldface can be set to the degree of darkness desired if the printer is capable of using the feature. Escape characters can be redefined to allow the use of an escape sequence as normal text. The .US command underscores the specified text, and finally, the .TR command allows the translation of a specified range of values to a third range. This is handy for adding 32 graphic characters so that the MX-80 will print them. It is also possible to use ASCII characters to draw a graphic display and then translate them into regular graphic characters.

Indent can be set to a specific value,

or it can be incremented or decremented by a specified value. The amount of the indent is up to you. Hanging indents or bullets can be done automatically with .HI or manually with .OF. The code .CE ON starts the centering of text and .CE OFF turns it off. The .TB @a,b,c... allows the setting of tabs.

Finally, for this section, a brief look at the script operation commands. It is possible, before printout begins, to select one or more of the following features: double or triple space, video output only, stop at the end of the page, print only pages within the specified number range, produce multiple copies, print each filespec in the margin, print all text in boldface, print number lines in the left margin, and print only table of contents.

File handling is one of the most powerful features in Newscrip.

Maybe you are not interested in using all of these fancy formatting commands; *Newscrip* is still for you. It has a full set of defaults so that you can just sit down and type.

While I have briefly covered most of the special commands either specifically or by category, it is important to remember that I could not possibly mention them all in a review. If you have a special requirement that you do not see here, or if you would like clarification on a special feature I have mentioned, call or write Chuck Tesler at Prosoft. He will be glad to answer any questions.

Documentation

The impressive and slightly intimidating documentation of *Newscrip* serves two purposes. The first and most obvious is to instruct the user in *Newscrip*

operation and to serve as a reference guide during processing sessions.

The second and less obvious purpose is to serve as an example of the capabilities of the program. The entire manual (with the exception of an occasional drawing) was written using *Newscrip* and printed on the Radio Shack Line Printer IV.

The manual is 178 pages long including the index (also compiled and printed by *Newscrip*). It is well laid out, and if you start at the beginning, you can be using *Newscrip* in 30 minutes.

Conclusion

There are a few features that *Newscrip* doesn't have that some people might want. For example, it does not have on-screen formatting. To see how the document will look, you must print it. This will not be changed, because it is impossible to show super/subscripts, expanded characters, proportional print, etc., on the monitor.

Newscrip will not do automatic footnotes either, and at this time there are no plans to add that feature. Finally, *Newscrip* does not support multiple columns as *SuperScript* does. That feature will be added soon.

There is an additional hangup that may pose a minor problem for some users. Some Z80 processors are a bit too slow to support *Newscrip*, and if you have an older Model I, you might have to install a Z80A. If this is the case, you are probably having trouble with other software as well. The fault is not with *Newscrip* but with your hardware.

All things considered, I recommend *Newscrip* highly. I have used most of the currently available word processors and I have never seen one with the power of *Newscrip*. If you're looking for a word processor, consider *Newscrip*. If you have an older version of *Newscrip*, upgrade. □

CIRCLE 404 ON READER SERVICE CARD

Daisy

creative computing

SOFTWARE PROFILE

Name: Daisy
Type: Word processing
System: TRS-80 Model I or III
Format: Disk
Language: Machine language
Summary: Advanced, detailed word processing package
Price: \$74.95
Manufacturer:
Med Systems Software
P.O. Box 3558
Chapel Hill, NC 27514

As the owner of a small but growing word processing business built around a TRS-80 Model III and Daisy Wheel II printer, I quickly developed a love-hate relationship with Radio Shack's *Scripts*. I will never understand why so many practical and necessary functions were left out of such a basically good word processing program. *Scripts* will not do the following: underlining, boldface print, superscripts, subscripts, right-justified proportional spacing, and special characters other than those on the key-

Grace M. Bowers

board. Nor does it offer any provision for looking at disk directories or killing files from within the program, checking where pages will end prior to printout, pausing printout to change printwheels or insert text, placing footnotes, or reserving print formats.

Daisy picks up where *Scripts* leaves off.

In attempting to find a satisfactory patch to fill in where *Scripts* leaves off, I have been further frustrated. Nothing was happening to relieve my growing depression, until I discovered *Daisy* by Med Systems Software. This package works with the Radio Shack Daisy Wheel II printer to do most of the above, and much more.

When I saw the ad for the *Daisy* word processing package, my first thought was that this product seemed like more than just another patch to *Scripts*. The list of capabilities for "professional/scientific" word processing was impressive, and the ad read "It is the best. Period. We guarantee you will agree." There was even a 14-day money-back

guarantee. I couldn't resist.

Daisy for the TRS-80 Model I or III uses Model I *Scripts*, because of the difficulties encountered when Radio Shack decided to market Model III *Scripts* with only two backup copies. The program is compatible with TRSDOS 1.1 or 1.3 (not 1.2) and NEWDOS 80, although the documentation states that other disk operating systems should be compatible if suitable zaps are applied.

Documentation

The documentation was the first thing about this package that warmed my soul; it consists of about 120 loose leaf pages in an attractive binder, and is very well written. The manual is divided into logical sections, with a table of contents in front and a complete index in back. There is also a handy laminated reference card which lists useful information about control codes. I should point out, however, that *Daisy* is not the place to begin if you have never used *Scripts*. *Daisy* picks up where *Scripts* leaves off, and the documentation assumes that you already have a thorough knowledge of *Scripts*.

I found the program very easy to get up and running. If you are using TRSDOS 1.3, an XFERSYS is necessary. With the Med Systems advertisement torn from the magazine and sitting before me, I deliberately went through the list of *Daisy* functions and tested ev-

Grace M. Bowers, 1582 Glenbrook Dr., Santa Rosa, CA 95401.

The Inmac PlusTM floppy is totally reliable, guaranteed for life, and you can get one free.

ALL YOU HAVE TO DO is ask, and we'll send you three Inmac Plus premium diskettes.

One—up to a \$9.90 value—is free.

The other two are for you to use for 45 days at no obligation. Test them out. Compare them to the diskettes you're now using.

We're convinced that once you try Inmac Plus, you'll buy Inmac Plus. And nothing else.

But if you're not completely satisfied, simply return the two diskettes and keep the third one with our compliments.

Inmac Plus quality for error-free performance.

Do your floppy disks work the first time, every time you put them in your drive?

Ours will, and we're not just saying that. We back every Inmac Plus diskette with the strongest guarantee in the industry—a *lifetime guarantee*.

For as long as you own an Inmac Plus diskette it will read and write flawlessly. It will protect your data. It will perform to perfection—or we'll replace it free.*

With Inmac Plus diskettes, you're guaranteed 100% read/write accuracy and lifetime data protection.

The problem with ordinary floppy disks is that they gradually wear down under the everyday stress of drive heads and pressure pads. This can result in everything from annoying read/write errors to complete data loss.

Inmac Plus diskettes don't have this problem. They're made with a durable oxide coating that "gives" not flakes as hard-coated disks do. So you don't wind up gambling with your data or wasting hours of valuable programming time.

Inmac Plus diskettes excel on all types of

Inmac Plus diskettes surpass every applicable performance standard in the industry. Trust them with your most critical programs and data.

drives, even finicky ones. One reason for this is a special reinforced hub ring that protects against a major cause of data loss—warps, dents, and tears resulting from the drive's clamping hub.

In all, Inmac Plus diskettes go through 32 separate quality tests. And each is given an individual registration number to help us maintain the highest quality standards possible.

Due to this stringent quality assurance program, they surpass every applicable performance standard in the industry. You can trust them with your most critical programs and data.

Nothing compares— at any price.

Add it all up.

Inmac Plus diskettes give you total reliability. 100% read/write accuracy. Lifetime protection for your data.

That's why they're your best buy—at any price.

This exclusive Trial Offer ends August 31, 1983.

Here's how it works.

Simply mail the attached card or phone our toll-free number by August 31, and we'll send you three Inmac Plus diskettes—one of which is yours to keep, no matter what.

The other two are yours to use for 45 days at no obligation. Return them if not completely satisfied.

But we're expecting just the opposite. We think you'll be so utterly impressed, you'll want to keep the two diskettes.

That's why we're enclosing an invoice with

your order, so that by the end of the trial period, you can mail it back to us, along with your check or money order. Or if you prefer, use your credit card—whichever is most convenient for you.

Remember, send no money now. We want you to try Inmac Plus before you buy Inmac Plus, and we'll ship your diskettes within 24 hours so that you can get started as soon as possible.

Offer limited to one free diskette per customer. Offer void in Alaska and Hawaii.

Get three diskettes for the price of two.

To be sure of getting the Inmac Plus diskette that's right for your system, specify its make and model. Below are some of the most popular systems and the corresponding Inmac Plus diskette. If yours is not listed, call us for assistance and pricing information.

System	Inmac Plus description	Price for 3 diskettes
Apple II, II Plus, III; IBM PC (single side); Osborne PC; Radio Shack TRS80-1 or 3	5¼" SSDD Soft Sector	\$11.80 (save \$5.90)
AB Dick Magna Writer; Cromemco Z2H; HP85/Series 9826A, 9836; IBM PC (Dual Side)	5¼" DSDD Soft Sector	\$16.80 (save \$8.40)
DEC RX01; IBM System 32, 3737, 3740, 3730, 3741, 3600, 3601, 3790, 3791	8" SSDD Soft Sector	\$15.80 (save \$7.90)
	IBM format 2305830

THERE'S A CONCERTO IN YOUR COMPUTER

COMPU-MUSIC

... And a waltz, a blues song, a rhapsody, and a whole lotta rock n roll. In fact, your computer can now play any kind of music, thanks to the new Roland Compu-Music.

Roland, the world's leading producer of synthesizers and electronic musical instruments, has put its years of music programming experience into a high performance computer/music synthesizer system that can easily be used by anyone—from the computer-user with a musical background to the programmer with a song in his heart.

The Roland Compu-Music does for music what the word processor has done for words. The Compu-Music

software allows your computer to write, program, change and store musical compositions of up to eight voices, plus a seven voice electronic drummer. The Compu-Music hardware (CMU-800) is a music synthesizer that plays these musical parts.

The CMU-800 connects to your computer through any auxiliary slot and then connecting to any amplifier or stereo system for performance. Because the Compu-Music system is software based, it allows for virtually infinite hardware expansion. It can never become obsolete.

Playing and programming the Compu-Music is so easy that you don't have to be a musician, but if you are, you'll appreciate the well-thought-out programming, a system that Roland has used for many years with proven success. Also, the CMU-800 hardware easily interfaces with many other synthesizers for expanded performance—all controlled by your computer.

The Roland CMU-800 Synthesizer retails for \$495.00. The Compu-Music Software retails for \$70.00 and is available for the Apple II and NEC computers. For more information, see your computer dealer or contact: RolandCorp US, 2401 Saybrook Avenue, Los Angeles, CA 90040 (213) 685-5141.

Underlining, double underlining, ^{super}scripts, subscripts, and boldface print all work beautifully in Daisy.

$$f(x) = \frac{X + Y + Z}{\log_e(1+W)}$$

Examples of the special functions available.

ery one. I was not disappointed, except in a few respects, which I will discuss later.

Daisy is a carefully written program that enhances *Scriptsit* in many practical ways. As the manual states, "...*Daisy* is mainly aimed at the production of technical reports," and this it does superbly. It comes complete with suitable formats built in for the three print pitches, which are referred to as Mono (10 pitch), Tiny (12 pitch), and Prop (proportional); or the user can enter his choice of format with regular *Scriptsit* commands. When copy markers are used, your chosen format remains as the default, so laborious entering of format lines is no longer necessary.

There is also a nifty function which allows you to begin printing in the middle of a text that has headers and footers. By invoking this simple command, the program will use the correct page format and the proper header or footer, and will even remember to print the right page number. Anyone who has struggled with the tedious business of using copy markers in *Scriptsit* will consider this a gift from heaven.

Features

Daisy retains all of the text editing features of *Scriptsit*; none of the original commands are changed. You can actually load *Daisy* and use only *Scriptsit* commands without any problem. But while *Scriptsit* alone will not, for example, allow you to pause printing in the middle of a page, *Daisy* does; and you can change print wheels, or even insert text to create personalized form letters. *Daisy* can also cease printing in the middle of a page—useful if you want to print only a portion of something or when experimenting.

Underlining, double underlining, superscripts, subscripts, and boldface all work beautifully in *Daisy*. Another useful feature allows for positioning of the printhead anywhere on a line—a vital capability if you want to arrange proportional print in neat columns.

Daisy offers an impressive array of over 100 special symbols, both "intrinsic" (actually located on the daisy wheel), and "extrinsic" (contrived), for mathematical, scientific, and foreign language applications. The extrinsic characters are very good representations, but are available only in Mono (10 pitch)

print. *Daisy* has six basic control characters; two of them are devoted primarily to producing special symbols when combined with keyboard characters. In addition, the symbols can be positioned very precisely within the text so that such things as mathematical equations, scientific formulae, and foreign language text really look professional.

The control characters combine with one another and with keyboard characters, and although these many combinations seem confusing at first, you quickly begin to remember what the control characters look like on the screen. Control characters are produced by pressing the SHIFT key and another key (such as ENTER) simultaneously, in much the

Underlining, double underlining, superscripts, subscripts, and boldface all work beautifully.

same way the control keys for *Scriptsit* operate. The author was striving for simplicity amidst complexity, and I think he succeeded.

The documentation includes this example:

$$f(x) = \frac{X + Y + Z}{\log_e(1+W)}$$

which gives you an idea of the kind of technical text that *Daisy* does especially well. Remember, *Scriptsit* alone is entirely incapable of producing such an equation.

Another very fine feature of *Daisy* is that it changes the order in which *Scriptsit* goes about checking a document in preparation for printout. Ordinarily, when you ask for a printout in *Scriptsit* the first thing the program does is check to see if the printer is turned on; it will not go on to format the text unless the printer is running. *Daisy* makes no such demand. It will allow you to format your text completely without a printer even being connected. After formatting, *Scriptsit* offers no method for finding out where pages will end, which often leads

to monumental frustrations and piles of wasted printout. *Daisy*, on the other hand, includes a page-end function; you can check to see that each page terminates at an appropriate point before beginning to print.

It is important to note that most of the control characters used in *Daisy* are completely ignored while *Scriptsit* formats text and decides where to insert carriage returns. Therefore, you can have a large number of "invisible" control characters in a line without running into trouble. Experience with other *Scriptsit* patches has familiarized me with the problems that can develop when the program does count these "invisibles." In such a situation, you can have a line of text with 16 invisible control characters that appears to stretch clear across the video screen; but when it is printed, that line is 16 spaces short because *Scriptsit* has counted all the invisible codes in deciding where to return the carriage. With *Daisy*, the line with 16 control codes will still appear on the video screen, but the carriage return will probably occur in the middle of the following line because *Daisy* skips over the invisible codes as it counts spaces. Obviously, this presents problems if you wish to hyphenate the text; you must be careful when attempting to hyphenate if there are more than just a few invisible codes present.

Daisy also allows you to manipulate spaces in *Scriptsit* for a variety of effects. You can insert a "hard" space between two words, for example, to prevent them from being separated or to preserve the integrity of certain expressions when right justification is used. By inserting hard spaces, *Daisy* makes it possible to underline blanks, both between words and to create long underscores.

Footnotes

The placing of footnotes on a page, a troublesome task under the best of circumstances, is made much easier in *Daisy*. *Daisy* allows for the creation of one "footnote block" per page, which can contain up to ten lines of 10 pitch print, or correspondingly fewer lines of either 12 pitch or proportional. The limited space available in the footnote block may cause problems if you have to prepare pages of text that are rampant with footnotes, but should be adequate for most users.

Daisy, continued...

The Folio feature allows you to print text in two or three columns per page—ideal for newsletters. Folio is easy to set up, and the results are pleasing. Standard headers, footers and footnotes may be used, and you can choose from either Tiny or Prop pitches. Tiny can be right-justified in Folio; Prop cannot.

Disappointment

At this point I will voice my major disappointment with *Daisy*; it involves the use of proportional print. Upon reading the documentation, I found that "no claim is made to give right justification in the proportional pitch... if you were expecting right-justified texts in proportional pitch then ask for your money back, you have made a dreadful mistake." (*Daisy Manual*, p. 5.)

The author does state that the program is designed for the production of technical reports, and the Folio feature has little to do with technical text, but it was in experimenting with Folio that I felt very acutely the lack of true proportional spacing with right justification in the *Daisy* package. For example, the Folio format for proportional print produces two nicely arranged columns of text. But the right margins appear very uneven. In addition, no mention is made in the documentation of any provision

for hyphenating words in Folio mode. There is a demand for documents with true proportional spacing and right justification, and it is frustrating to have hardware capable of supplying that demand but software that is incapable of doing so. Thus, my feeling is that if *Daisy* were expanded to include this one

**The Folio feature
allows you to print text
in two or three
columns per
page—ideal for
newsletters.**

feature, it would be a truly superlative product.

Another problem which I still cannot explain involves obtaining a disk directory from within *Daisy*. Using TRSDOS 1.1, I couldn't get a directory at all. With TRSDOS 1.3, the directory appeared along with an irritating little graphics block that wouldn't go away. A telephone call to the company revealed that they had never heard of such a

problem, and they suggested that I send them my disk.

Summary

Overall, I was very impressed with the careful attention to detail that is obvious in *Daisy*. The author knew what he wanted to accomplish, and did it in a thorough way. In my experience, software and documentation are too often written without an intimate knowledge of what needs to be included to make a program really professional and useable. Details are too often overlooked and lead to big irritations.

Happily, *Daisy* seems to be amazingly free of such oversights. The many features of *Daisy*, combined with its ease of use and carefully presented documentation, make it well worth \$74.95. If you have a need to prepare highly technical documents, or just long, nontechnical ones, *Daisy* supplies just about everything you could need. Its special features will also come in handy for many other sorts of work.

If you are looking for a program that will expand *Scriptit* into a professional word processor capable of producing highly technical texts with ease, and you don't care about right-justified proportional print, then buy *Daisy*. □

STONEWARE'S AMAZING NEW GRAPHICS PROCESSING SYSTEM

Professional quality graphics for the Apple II Plus.

After two years of development, Graphics Processing System is the ultimate in fast, low cost, easy-to-use graphics programs. Graphics Processing System creates and edits images in the same manner word processors work with text.

Graphics Processing System features: **Grid Maker** for working with scale and proportion ■ **Colors** can be mixed and used to color lines, objects and backgrounds ■ **Two Zoom** powers for greater detail resolution ■ **2-D Rotation** to full 360° ■ **Duplication** on screen, to disk, and from disk ■ **Text Capabilities** in upper case A-Z, 0-9, and all characters on the Apple keyboard ■ **Modify or Erase** a portion of an image without having to

start from the beginning

- **Enlarge or Reduce** images
- **Change Proportions** vertically and/or horizontally
- **Print Overlays** separately and in different colors
- **Accesses 16K RAM card**
- **Compatible** with other Apple HiRes graphics
- **Uses** Apple compatible game paddles and joystick
- **Speaks** directly to The Apple Silentype printer and accommodates graphic dump programs for other printers
- **Professional Version** is also compatible with Apple Graphics Tablet, Symtec Light Pen, Houston Instruments

HiPlot DMP 3, 4, 6 and 7, HP7470A Plotter, Strobe 100 Plotter, IDS 460 and 560 Graphics Printers, Epson MX80 Printer with Graphtrix.

Only **\$179.** for Professional Version and **\$69.** for Standard Version.

NOAH WEBSTER, MEET YOUR MATCH.

A few months ago, Jennifer would rather have gone to the dentist than do her spelling homework.

Then Mom bought Crypto Cube™ by DesignWare™. Now Jennifer has become a word fiend. In fact, she spends hours paging through the dictionary to find words that will stump her parents. And, as she does, she builds her word skills.

Crypto Cube, like all DesignWare software products, combine computer game fun with sound educational principles.

THE THREE DIMENSIONAL COMPUTER WORD PUZZLE.

Five minutes after Jennifer sat down at the computer with Crypto Cube, she was hooked. First she worked her way

through the many word puzzles that come with the game. Then her parents typed her spelling homework into new puzzles.

Then Jennifer started making puzzles for her parents!

So now, Crypto Cube is the favorite family game in Jennifer's home.

As Jennifer would say, "indubitably."

DESIGNWARE MAKES LEARNING COME ALIVE.

If you own an Apple II plus, Apple IIe IBM-PC, Atari 400, 800, or 1200XL with a disk drive, you should take a close look at all the DesignWare software.

Another word game, Spellicopter™, is an action-packed spelling game. You'll fly perilous missions through

crowded skies and mountainous terrain to rescue words. And you'll want to keep an eye out for our new math and science games. See your local dealer or call DesignWare at (800) 572-7767, in California (415) 546-1866 for our free software catalog. You'll be delighted with the way your kids will learn with DesignWare.

And they'll be playing for the fun of it.

MagicPrint

There are now dozens of word processing programs available for various microcomputers. Costing from only a few dollars to over a thousand, the features and capabilities of these programs cover just as wide a range.

One of the first word processing programs to gain wide recognition was MicroPro's *WordStar*. Designed to operate on the 8080/Z80 family of microprocessors, *WordStar* has been upgraded over the years and is now a stable, proven product. In fact, some people even refer to *WordStar* as the Cadillac of word processors.

While *WordStar* has an impressive array of editing and printing features, there are many things which *WordStar* does not include, some of which have been incorporated into competitive products. *WordStar* is, nonetheless, so popular that a family of "add-on" products has grown up to add various special features to the *WordStar* kernel. Among the abilities lacking in *WordStar* that independent software packages can add are generation of a table of contents and/or index, creation of footnotes, spelling verification, and grammar and syntax scanning.

Another feature missing from *WordStar* is true proportional printing. Modern daisywheel and thimble printers like the Diablo, Qume and NEC Spinwriter are capable of moving the printhead in very small increments, usually 1/120th of an inch horizontally. *WordStar* and other word processors use this ability to spread characters out for right justification (even right margins). This usually looks much better than merely inserting spaces between words to line up the right margin, as is necessary with printers that can print only in even columns like a typewriter.

Glenn A. Hart

The process of calculating the many small incremental movements and determining how words are placed to form a complete line involves complicated procedures. There are many ways to do this, and the method chosen has a major impact on how the printed output looks.

WordStar performs such "micro-space justification" reasonably well. However, it assigns each character about the same width, as a typewriter would (subject to some minor adjustments). With most type elements this is fine, although even with such standard daisywheels the algorithms used by *WordStar* do not result in printed output as attractive as that obtained from some other word processors.

Special wheels which use a different type style are available. Wide characters such as M, m, W, w, @, and others can be significantly wider than they could be on a standard type face. Other characters can also be adjusted for attractive appearance and consistency. Such "proportional spacing" wheels don't look right when used with *WordStar* because the wide letters run into their neighbors.

Programs with true proportional spacing vary the horizontal movement of the printhead based on the actual width of the character to be printed on the specific wheel in use. This is similar to the old IBM Executive typewriters, and results in much more attractive output that can approach typeset quality. From the program designer's point of view, however, true proportional printing adds greatly to the complexity of the output routines. Each character must be looked up in a

table of width values specific to the print wheel in use and various adjustments must be made.

WordStar does not officially support true proportional printing of this sort. There is an unsupported method of coming close to it, which involves inserting a Control-P at the beginning of the file to be printed and making sure that every line of the file has been reformed with the Control-B command. This procedure is awkward at best, and while printing quality does improve, *WordStar* still uses its normal line forming algorithms so even after all this the output is not truly proportional.

MagicPrint

A new program called *MagicPrint* adds true proportional spacing and many other features to *WordStar*. Written by Computer EdiType Systems of New York and distributed by Lifeboat Associates, *MagicPrint* works with Diablo and Qume printers. An NEC version should be out by the time this article appears, and a version is also available for *Electric Pencil* users.

MagicPrint is a free standing print program. Text files are prepared with *WordStar* as always, except that a new set of commands is imbedded in the file in lieu of the normal *WordStar* dot commands (which are now ignored). The standard *WordStar* control characters for boldface, underlining, and other enhanced printing work normally for the most part, although there are some operating differences and enhancements. *MagicPrint* also adds other features including automatic footnoting, multiple-line headings and footings and some others we'll discuss shortly. Once the file is entered and edited, *MagicPrint* is used to print the file; the normal *WordStar* routines are not used at all.

ORDERING INFORMATION AND TERMS: All Mail: P.O. Box 23068, Portland, OR 97223

All items usually in stock. We immediately honor Cashiers Checks, Money Orders, Fortune 1000 Checks and Government Checks. Personal or Company Checks allow 20 days to clear. No C.O.D. Add 3% for VISA or MC. Include telephone number. Add 3% for shipping, insurance and handling (S.I.H) with \$5 minimum. UPS ground is standard so add 3% more for UPS Blue with \$10 minimum. Add 12% total for S.I.H for US Postal; APO or FPO with \$15 minimum. For Hawaii, Alaska and Canada, UPS is in some areas only, all others are Postal so call, write, or specify PO. Foreign orders except Canada for S.I.H add 18% or \$25 minimum except for monitors add 30% or \$50 minimum. Prices subject to change and type errors, so call to verify. All goods are new, include factory warranty and are guaranteed to work. Due to our low prices, all sales are final. Call before returning goods for repair or replacement. Orders received with insufficient S.I.H charges will be refunded. ORDER DESK HOURS 8 to 6 PST. M-F and 10 to 4 Sat. 1 PM here is 4 PM in NY.

OUR REFERENCES: We have been a computer dealer since 1978 and in mail order since 1980. Banks: 1st Interstate Bank, (503)643-4678. We belong to the Chamber of Commerce (503)644-0123, or call Dunn and Bradstreet if you are a subscriber. Computer Exchange is a division of O Tech Group, Inc.

MagicPrint, continued...

The *MagicPrint* control character commands are listed in Table 1. These control characters are imbedded in the text, and most of them work just as they normally would, except that they are cleared at the end of a paragraph. This eliminates the need to put a closing character after short lines and avoids unintentionally printing an entire document in an enhanced mode.

Table 1. *MagicPrint Embedded Commands.*

Control-An (n=0-9)	Variable pitch
Control-B	Boldfacing
Control-C	Halt for wheel change
Control-D	Double strike
Control-E	Footnote start/end
Control-F	Print cent-sign
Control-G	Print "non-sign"
Control-H	Accenting
Control-L	New page
Control-N	Reset command
Control-O	Non-break space
Control-R	Justify partial line
Control-S	Underlining
Control-T	Superscript
Control-V	Subscript
Control-X	Overstrike
Control-Y	Ribbon color change
Control-carat or Control-underscore	Soft hyphen

Two modes of underlining are available—the normal *WordStar* style of underlining only characters (not spaces) and solid underlining. *WordStar* allows only

two predefined printing pitches without using a dot command; *MagicPrint* provides ten increments. This is used for the *local* adjustments called "kerning" by typographers. The only totally new commands are Control-R, which is used to justify partial lines, and Control-L, used as a replacement for the .pa command in *WordStar* to indicate an unconditional end-of-page and Control-E for footnoting, which will be examined later.

MagicPrint uses "comma" commands in place of the *WordStar* "dot" commands (see Table 2). As in *WordStar*, the command character, now the comma, must be placed in the first column on the left, followed by the specific command desired. *MagicPrint* defines two classes of comma commands—"stable" commands, not affected or reset by carriage returns or the Default command, and "transient" ones which are.

The Commands

Reviewing the commands in alphabetical order, Backline is a negative line-feed, used for certain hanging paragraph and outline formats as well as for two-column printing. The *MagicPrint* Center command can specify a number of lines to center, but it does not actually center them on the screen. The algorithm used is noticeably superior to that used by *WordStar*, and works perfectly in the proportional spacing mode (*WordStar* doesn't handle centering correctly in its quasi-proportional mode).

Default restores transient command values to the default status in effect when the program is invoked (these default values can be changed by an experienced

user with DDT). The Even command places short lines flush with the right margin on either even or odd numbered pages and is useful for headings or footings when double sided pages will be bound.

The F command controls whether the program pauses after printing a page for single sheets or prints continuously for fan fold paper. This command overrides the user's choice when *MagicPrint* begins printing. G sets the page length in terms of the number of lines which will be printed, while GG sets the overall length of the paper in lines. The cHAracter command changes pitch, similar to the *WordStar* .CW instruction. Indent moves the beginning of a line to the right a specified number of columns.

MagicPrint can output text in four spacing styles—true proportional or "old" (*WordStar*) proportional, either right justified or not. Figure 1 shows an example of each. Line sets the line length—normally 77. Note that true proportional printing puts many more characters on a line than normal printing (the exact number depends on which characters the line contains), hence the seemingly long line length.

Margin sets the left margin. There isn't any right margin command per se; the W command serves as a sort of "right indent" instead. NO ejects the page, useful if for some reason the Control-L can not be imbedded in the text. The other N commands are conditional paging statements, useful in ensuring that text segments are not split over page boundaries. *MagicPrint*, incidentally, automatically avoids annoying orphan sentences (the final sentence of a paragraph on the first line of a page) by extending its page length to include the orphan with its paragraph. Outdent is used in outline-type formatting.

The various Page numbering commands are more flexible than those of *WordStar* and are quite useful. Rightflush moves the end of a partial line to the right margin. This is surprisingly convenient in placing page numbers and the like. Spacing adjusts the spacing between lines and allows half spacing (one and a half blank lines between text, for example). Underline determines whether the underlining will be continuous or broken. Vertical controls the width between lines in 48ths of an inch. Width indents the right margin.

Two special commands, # and *, are used for setting up the heading and/or footing used on a page. The pound sign is used when the page number is to be included and the asterisk when it is not. Unlike *WordStar*, *MagicPrint* allows multiple lines to be defined for headings and footings, and the center and rightflush

Figure 1. *MagicPrint Output Examples.*

True Proportional Justified

This is a sample of the print quality obtained with the *MagicPrint* program. It is printed on a Diablo 1650 printer with a Diablo Bold Proportional Spacing metal print wheel. All the program commands are set to *MagicPrint*'s defaults (other than the justification mode).

True Proportional Unjustified

This is a sample of the print quality obtained with the *MagicPrint* program. It is printed on a Diablo 1650 printer with a Diablo Bold Proportional Spacing metal print wheel. All the program commands are set to *MagicPrint*'s defaults (other than the justification mode).

Old Proportional Justified

This is a sample of the print quality obtained with the *MagicPrint* program. It is printed on a Diablo 1650 printer with a Diablo Bold Proportional Spacing metal print wheel. All the program commands are set to *MagicPrint*'s defaults (other than the justification mode).

Old Proportional Unjustified

This is a sample of the print quality obtained with the *MagicPrint* program. It is printed on a Diablo 1650 printer with a Diablo Bold Proportional Spacing metal print wheel. All the program commands are set to *MagicPrint*'s defaults (other than the justification mode).

If You Liked Donkey Kong, You'll Love JUMPMAN!

JUMPMAN. THE COMPUTER ACTION GAME.

If you liked jumping over barrels and climbing ladders to save damsels in distress, you'll love the blazing excitement of JUMPMAN. Your incredible speed and jet boosters let you leap from girder to girder, scale ladders and ropes to disarm the bombs planted in Jupiter Headquarters. But it's not easy and there are thirty levels of difficulty. You'll have to dodge missiles, killer robots, flying saucers, crumbling girders and vanishing escape Routes. In the heat of battle, JUMPMAN must keep a cool head.

Artesians. Win with brain power. Not fire power.

Dive into a different sort of battle, Artesians. It's a battle of wits—not weapons.

And, it's the new video game that could be the most intense challenge you've ever undertaken. Playing will teach you to think like a mastermind. Your goal is to fill the jugs with precious Artesian water. But first, you must maneuver through four floors of increasingly complex maze-like paths. Dodge rolling barrels. Duck dangerous conveyor belts. And elude your pursuers—Hank, the watchman; Floyd, the dog, and an endless horde of Artesians. Then, you've got to cover all your tracks—and escape.

Artesians. The more you play, the more infinite the complications become.

So fire-up your brain power for an evening of action. And match wits with Artesians.

Artesians is a high resolution arcade style video game written for the Apple II, Apple II+, and the Atari 400/800 home computer. Available from computer stores or direct from Rena-Soft, 1070 Shary Circle, Concord, CA 94518, (415) 676-5757. Artesians. \$34.95. Requires 48k.

Table 2. MagicPrint Comma Commands.

B	Backline	O	Outdent first line of a paragraph
C	Center lines(s)	P	Set (change) page number
C	Center 1 line	Px	Start page number with x
C+	Turn on centering	P0	Postpone page numbering until next page
C-	Turn off centering		
C0	Same as C-	P0x	Start page number with x from next page
Cx	Center x lines		
D	Default values restored	P-	Turn off page numbering
E	Rightflush partial line	P+	Turn on page numbering
E-	on even page numbers	R	Rightflush the line
E+	on odd page numbers	S	Sets line spacing
F	Page pause control		Plus symbol (+) adds half time
F0	Continuous printing	U	Broken or solid underline
F1	Pause after each page	U0	make the underline broken
G	Set printable page length in lines	U1	make the underline solid
GG	Set gross page size in lines	V	Set width between lines
H	Change character density	W	Width if line reduced on right (right indent)
I	Indent the line on the left		
J	Justify right margin	RETURN	Halt printing
J0	true proportional unjustified		
J1	true proportional justified	#	Page number format symbol
J2	old proportional unjustified	#T	Page number on top of page
J3	old proportional justified	#B	Page number on bottom of page
L	Set line length	#T0 or #B0	Defer page number to next page
M	Set left margin)	End of page numbering format block
N0	Same as Control-L	*	Page title format symbol
N+x	Move to next page if more than x lines in current paragraph	*T	Page title on top of page
		*B	Page title on bottom of page
N-x	Move to new page if less than x lines in current page.	*T0 or *B0	Start title from next page
)	End of page title format block

commands, in conjunction with backline, allow some very nice page formatting.

Finally, *MagicPrint* handles automatic footnotes very well. The text of the footnote itself is surrounded with Control-E characters, and the program places the footnote at the bottom of the page, separated from the normal text by a line. Footnotes too long to fit on the bottom of the page are carried over to the bottom of the next page. There is no provision to accumulate footnotes for printing at the end of the document.

Once everything is set, *MagicPrint* is invoked by simply entering "magic," in which case the program asks what file you want to print, or by "magic filename" if you already know. Using the R option from the *WordStar* main menu to run *MagicPrint* makes it just about as easy to call up *MagicPrint* as it is to use the *WordStar* printing routines. The program asks if continuous printing or pausing after each page is wanted (the answer to which will be overridden if the appropriate command is in the text file itself) how many copies are needed and on what page to start printing. There is no provision for specifying what page to stop on, but this is easily handled by hitting a key while the program is printing.

Evaluation and Summary

MagicPrint works exactly as claimed. Every command does what it is supposed

to, and printing proceeds quickly and cleanly. Informative error messages appear if there is any problem in the file or in the commands which have been entered. The tremendous improvement in the quality of the printed output is obvious.

Also on the plus side are the special features *MagicPrint* adds to *WordStar*. The new centering provisions and multiple line headers/footers are excellent, as is the increased flexibility in page numbering and titling. Footnotes are handled perfectly within the limitations of the method.

There are some major drawbacks, however. One of the advantages of *WordStar* is the ability to see a reasonable representation of what the printed output will look like on the screen. While *MagicPrint* has several features which make one miss this a bit less than might be imagined, it is not uncommon to have to print a document, reedit and reprint to get things just right. With familiarity, the number of surprises goes down, but occasionally something unforeseen will occur. This is especially true with outlines and other text which needs columnarization or fancy indentions. To some degree, this is a function of the constraints that true proportional spacing imposes, and thus the extra work required for perfection is partially a price that must be paid for the improved appearance of the output.

MagicPrint has no provision for merging data files into form letters, including other text files, at print time or any of the other features of MicroPro's *MailMerge* module with which most copies of *WordStar* are sold. The author of *MagicPrint* is working on a *MailMerge* type program which is designed to do everything *MailMerge* does and more, but for the moment *MagicPrint* can not be used for such functions.

Finally, *MagicPrint* is rather costly at \$195 retail. As always, each potential buyer must judge whether the benefits of the program justify the cost. One obvious consideration is the ability to use a proportional printwheel. Not all letter quality printers can, especially since Diablo sells true proportional wheels only in metal.

A large part of the answer probably lies with how much of a perfectionist the user is. Some other word processors can print better looking documents than *WordStar*, and *MagicPrint* can match or exceed the best of them. Anyone who has been using the pseudo-proportional features of *WordStar*, with all its aggravations, in search of better quality will love *MagicPrint*. Lawyers, ad agencies, and others whose main product is printed material should examine the program carefully. It may seem that *MagicPrint* is an expensive addition to an already expensive word processor, but I, for one, wouldn't want to do without it. □

Apple Writer Extended

The first word processing program I ever used was *Apple Writer*, and I fell in love with it immediately. Okay, maybe it was puppy love, since I had never seen a word processing program before. For a writer who relies as heavily on multiple revisions as I do, any word processor would seem like a gift from heaven. Still, I loved the simplicity of *Apple Writer*, and the fact that I could begin with nothing more than a scant knowledge of the cursor control keys and produce a decent looking product. Then, when I began to learn how to use the search-and-replace feature, and the insert and block move features, I was enthralled.

I loved the simplicity of Apple Writer.

Later I was introduced to another, supposedly far more powerful and sophisticated, word processing program. I had to admit that it had all kinds of features I had never dreamed of, including 80-column display (although at the cost of buying an 80-column board), paragraph modes, automatic word-wrap, auto-indent, and editing of Applesoft and DOS text files.

But as hard as I tried, I just couldn't get the hang of the new program. There were so many commands to be learned that I spent half my time with my nose

Paul Bonner

in the user's guide, and the other half trying to recover from my mistakes. Which didn't leave much time for keeping a train of thought moving.

Nevertheless, when I bought my own Apple, I thought seriously about buying another word processing program. I was constantly frustrated by not being able to issue text-imbedded printer commands from *Apple Writer*. With Grafrax, my MX-80 has 20 type styles available, and I could use only one at a time. Since my primary source of income involves writing technical articles with a

good deal of boldface and italicized type, I was forced to print out my copy in normal print, and then spend half an hour underlining or circling phrases that were to be set in an alternate typeface.

So I considered other programs, but I really wasn't comfortable with any of them. I was in a quandary.

Then I saw a small advertisement for something called *Apple Writer Extended*. It promised to add all the features I wanted to *Apple Writer*, and it was cheap—discounted to less than \$30. Since it wasn't much of a risk, I ordered it. It arrived a few weeks later on a single disk containing 21 short routines.

The documentation instructs you to transfer the routines to a disk already containing the TEDITOR, PRINTER (which you rename Print 2), and PRINT CONSTANTS files. After doing that, and making a change in the printer address, you are ready to go.

Text Formatting

The most important routine as far as I am concerned is the printer text formatting program. Called PRINT EXIT on the *Apple Writer Extended* disk, this routine augments the original PRINTER routine to allow you to issue printer commands from within an *Apple Writer* file. This capability is accessed by entering the @ character, followed by a lowercase x. The next character you enter (in hex code) is interpreted as a printer command at print time. 9b following the @x sequence interprets the next letter as an escape character.

I find this very useful, since with

creative computing

Explore the Frontiers of Intelligence

THE MIND OF MAN

Chess, Checkers, and Odin (as played by U.S. Othello Association rules) are classic games of the intellect. They evolved over the centuries as a way to understand complex situations and achieve mastery in action.

Now, by interacting with the intelligence embodied in these programs, you can participate in the exciting challenge of the **Mind of Man**.

FOR ALL GENERATIONS— A NEW GENERATION OF INTERACTIVE INTELLIGENCE

Chess, Checkers, and Odin are unique—in playing strength and in what they let **you** do. You can try out any idea—and even get ideas from the programs themselves. Plus, it is easy and fun to play the games and use their many features:

- Different levels of play, from beginner to expert
 - Advice on best move
 - Take back and replay moves
 - Auto and manual modes
 - Instant replay of games
 - "Change" feature adds or subtracts pieces
 - Sophisticated opening libraries
 - Clear graphics
- Instructions include chapter on skillful play.

THE PEOPLE BEHIND THE PROGRAMS

LARRY ATKIN AND DAVID SLATE

Authors of the Northwestern University 4.7 Computer Chess program; Winners of the World Computer Chess Tournament, 1977-1980; Winners of 8 North American Computer Chess Championships between 1970 and 1979; Two of the world's authorities on machine intelligence.

PETER FREY

Professor at Northwestern University, teaching courses in Psychology and Computer Science. Editor of and contributor to the definitive text on computer chess: **Chess Skill in Man and Machine**. One of the U.S. Othello Association's top-ranked players.

CHALLENGES THE PROFICIENT; INSTRUCTS THE BEGINNER.

A new microcomputer standard for what many consider to be the ultimate game of the intellect. In addition to its superior playing strength, **Chess** from Odesia introduces a new generation of interactive intelligence—with 27 cursor-controlled features, including:

- Advice and prediction of best moves
- Save games to disk
- Graphic illustration of attacks and defenses
- Variations of blind-fold chess
- 17 levels of play, including postal and mate-finder modes
- Enactment of over 30 classic human and computer chess games
- Plus—an opening library of over 7000 moves.

For those who want the best.

YOU'VE NEVER KNOWN CHECKERS LIKE THIS!

Learn the complexities of this surprisingly sophisticated strategy game by interacting with **Checkers'** 24 user features:

- Play against 16 levels of difficulty
- Watch **Checkers** play against itself—one level against another
- Switch to "Give-away" mode, where the object is to make your opponent take **your** pieces
- Watch the **Checkers** movie—an instant replay of a whole game
- For those interested in the inner-workings of "programs that think", adjust 58 program parameters, so that **you** can experiment with the way **Checkers** itself thinks, and how it plays.

An ideal introduction to artificial intelligence.

WHY ARE 20 MILLION PEOPLE PLAYING THIS GAME?

A classic board game, where the object is to entrap your opponent's pieces—but only at the right time. The rules of play are simple and the game fast. At your disposal are the full range of features found in all of Odesia's **Mind of Man** series. You will need them, along with your keenest insight and deepest perception, to master the secret of **Odin** (playing by U.S. Othello Association rules). Join the growing number of strategists exploring the subtleties of a game that may change the way you think.

For Apple II, Apple II Plus 48K disk systems, and Atari 48K disk systems. Odin is also available for TRS-80 Model 1 & 3 32K disk systems.

After you ask what it can do for you now, ask what it can do for you later.

If you're about to buy a personal computer, you need to consider two basic

issues: What your needs are now, and what they're likely to be a few years from now.

That's why the HP-86 has to be your best choice. It's got the software and the hardware to go the distance.

The HP-86
Personal Computer.

Dow Jones/News Retrieval Service, or a number of other nationwide information sources.

When the time comes for more, consult our 600-page software catalog. Chances are, you'll find what you're looking for.

Software for today and tomorrow.

Save \$255* on the Personal Productivity Pac. Here's a good way to get started. With software that, if bought separately, would cost you \$750** We're offering it at the reduced price of \$495** You'll get VisiCalc® PLUS, the world-famous electronic spreadsheet for "what-if" planning. (The "PLUS" is a Hewlett-Packard bonus: extra programs

to quickly turn your spreadsheet into bar graphs, line graphs, or pie charts.) Plus WORD/80, for word processing. And FILE/80, for record keeping without paperwork.

CP/M®. Buy this plug-in module, and you'll extend your HP-86 system to accept many popular programs written under the CP/M operating system — programs such as WordStar™ and dBASE II.™

Graphics Presentations. When combined with the HP 7470A plotter, our graphics software lets you produce professional-quality pie and bar charts, line graphs, text pages, and overhead transparencies. And you can do it all in color.

Data Communications. If you decide you want it, an optional accessory lets you access The Source, the

Hardware that expands with your needs.

While your computer's ability to expand depends largely on software, naturally, the hardware must keep up. That's why the HP-86 system has a modular design. So you can add a printer or plotter as easily as you hook up a tape deck to your stereo. And operate up to 14 peripherals at once, if you wish.

When you find yourself facing lengthy problems or spreadsheet analyses, simply add more memory — up to 512K bytes.

As you demand more of your HP-86, you'll find that it keeps up. Whether you need a broad range of hardware, software, or peripherals, the HP-86 makes expansion easy, giving you a hard-working system tailored to help solve your specific problems.

If you need more good news, try this: The basic system is only \$2950** (64K computer/keyboard, monitor and disc drive).

Get a hands-on demonstration of the system that works for you now, and will still be working for you later.

CIRCLE 188 ON READER SERVICE CARD

Apple Writer Extended, continued...

Grafrax all printer commands are escape sequences. Once you have determined the proper commands for your printer, you can save them to disk and then insert them wherever you want with a CONTROL-I (insert) command.

The PRINT EXIT routine has other useful features, including the ability to override or add spaces in fill-justify mode, to underline text, or to print bold-face text by backspacing and restriking. In addition, you can send a formatted copy of a file to disk rather than to the printer.

The formatted file may contain variable-length spaces for insertion of data from other files, allowing you to produce form letters or update reports with relative ease. This feature also allows you to view formatted text on the screen as it is being sent to disk by issuing a MON C,I,O command before you run the printer.

Text File Utilities

In addition to print formatting, there are some excellent text file utilities included with *Apple Writer Extended*. With these you can edit text files, convert existing *Apple Writer* files to text files or vice versa, and convert Applesoft files to *Apple Writer* files and then back to Applesoft. This allows you to take advantage of the powerful features of TEDITOR while writing and editing Applesoft programs.

For example, suppose your favorite computer magazine contains a program or game listing in a version of Basic that makes heavy use of print-using routines, or other commands that Applesoft doesn't recognize. Normally you must change these as you enter them, and are subject to formatting errors for your trouble. With the text file editing feature you can enter the program as it appears and work out separate formatting sub-routines for each print-using routine. Then it's a simple matter to use the search feature to replace each print-using or PRINT @ statement with a GOSUB X. And of course, in writing programs, there are obvious advantages to having a search feature to keep track of or globally replace your variables, and a block relocating feature to move subroutines.

There are other goodies too. You can list *Apple Writer* files on the screen, and use your game paddles to control the scrolling speed. There is also a reset intercept subroutine that can be used with any program to print an error message when RESET is hit and then return to the program. Finally, SHIFT-N and ESCAPE SHIFT-N can be used to produce the underline character and the vertical bar, which are useful for designing forms, and are not normally available

from the Apple keyboard. Those characters will appear only when you print the file. On screen they will continue to appear as ^.

Documentation

The documentation is one great deficiency in this package. The instructions for using each routine are scattered through a 14-page booklet, making them utterly incomprehensible at first. However, by reading through the main documentation and the three appendices a few times, and playing with the routines for a while, you can eventually divine the use of most of them.

Figure 1.

```
@x8980N
```

```
@x9bE@x9bSPRINT EXIT FEATURES@x9bF
```

This example shows an Applewriter Extended file, with embedded printer commands. The example is printed in the default type-face on my Epson Mx-80.

Normally, when using Apple Writer, one has to issue a printer-command before running the PRINTER routine. Apple Writer allows you to change the margins, justification, and line spacing from within a file, but not the type-face.

Apple Writer Extended changes that, by allowing you to issue printer hex commands from within a file. Obviously, this gives you a great deal of versatility in printing a document.

```

Figure 2.

PRINT EXIT FEATURES

This example shows an Applewriter Extended file, with embedded printer commands. This paragraph is printed in the default type-face on my Epson Mx-80.

Normally, when using Apple Writer, one has to issue a printer-command before running the PRINTER routine. Apple Writer allows you to change the margins, justification, and line spacing from within a file, but not the type-face.

Apple Writer Extended changes that, by allowing you to issue printer hex commands from within a file. Obviously, this gives you a great deal of versatility in printing a document.

The print-time features of Apple Writer Extended allow you to take advantage of all the capabilities of your printer in a way that hasn't been possible before with Apple Writer.

That's about it. This program does wonderful things for *Apple Writer*. Of course, it doesn't make it a "professional" text processor for an office environment. You still have limited screen formatting, a 40-column display, and no automatic word-wrap. The form letter capabilities, although vastly improved, also remain limited. I use it to prepare articles for typesetting, to write letters, and for program editing. For those uses, it is just fine. Better documentation would definitely help, but as it is, *Apple Writer Extended* is a great value, and well worth the time it takes to figure out how to use it.

CIRCLE 406 ON READER SERVICE CARD

Listmaker, Listmaker, Make Me A List

List management programs help you create and store—are you ready for this?—lists. More than that, they allow you to search through your lists to find specific information about the people, places, or things of which you are keeping track. And if the list program is a good one, it will allow you to do something such as create personalized form letters, print mailing labels, or develop an alphabetized phone directory, with all the information you have compiled.

The software publishing arm of *Reader's Digest* recently introduced an inexpensive program called *Listmaker* for the TRS-80 Models I and III, Apple II, and IBM Personal Computer that lets you do all of these things.

What sets *ListMaker* apart from most other list managers is that it can create "merge-printed" documents by automatically inserting a string of information into the proper places in a form letter. Merge printing is typically found only on expensive word processing programs or special "document handling" software.

How would you use *ListMaker*?

For a business, *ListMaker* can keep mailing lists of clients, employees, or subscribers; send personalized form letters to customers, vendors, sales prospects; print mailing labels; and develop customers, information files which can be sorted by zip code, type of business, alphabetically, by state, etc.

Schools and clubs can use *ListMaker*

Gordon McComb

to maintain student lists and code them by bus route, grade reports, parent information, health information, etc.; send personalized letters; create inventory lists; and compile class, member, or group statistics for reports.

In the home, *ListMaker* can maintain a directory of frequently used services (repair, babysitting, etc.), develop a home property inventory, or compile a monthly bill register, complete with due dates and mailing labels.

In short, *ListMaker* can be used whenever a modest amount of data must be stored, sorted, and retrieved. Since you specify the way the information is to be presented, you can use it for just about any application, from simple list printing to completion of complicated forms.

Keep in mind, however, that businesses, schools, and clubs with over 500 names to track may find *ListMaker* a bit limited. *ListMaker* can handle large numbers of records, of course; its limitation is that it lacks the sophisticated multi-level sorting capabilities often required when working with long lists. A more highly structured database management program would be better suited for that job.

Overview

ListMaker comes on floppy disk only. For this discussion, we will examine the use of *ListMaker* with the TRS-80 computers.

The standard Radio Shack TRSDOS disk operating system is on the program disk when you receive it from *Reader's Digest*. You need only power up your system and slip the disk into the drive to start work. And since you buy the program for either the Model I or the Model III, there is no disk conversion required.

ListMaker is menu driven, and to a great extent, interactive. Upon loading the program, you are greeted by an option menu that allows you to perform *ListMaker* related functions, and some disk utility routines, including Format Data Disk and Disk Contents (otherwise known as a Directory).

After you have entered *ListMaker*, you can perform four basic functions:

- You can create and store a list of

creative computing

SOFTWARE PROFILE

Name: ListMaker

Type: List manager

System: TRS-80 Models I/III, Apple II, and IBM PC

Format: Disk

Summary: Very good list manager/mail-merge utility.

Price: \$97.50

ListMaker, continued...

people, places, things, or whatever you want. Each separate item in the list must contain the same type of information, however. You cannot throw data into the list files haphazardly and expect *ListMaker* to shuffle through it.

- You can sort through your lists and have *ListMaker* find specific items of interest. It can store the sorted list for later use if you wish. This sorting capability is one of the most powerful features of the program.

- You can have *ListMaker* print out your list—either all or part of it. If you want a sorted list, you can print out only selected entries or selected portions of each entry. For example, you can ask *ListMaker* to sort through your list and pick out only those customers who have a telephone number with the area code of 212.

- You can place all or part of each entry into specific banks in a form letter. As mentioned before, this is called merge printing, and is an extremely powerful tool when used properly. You can instruct *ListMaker* to insert the name, address, salutation, account number, balance due, or other information you specify into a document. It will go through your entire list and create individualized letters in this fashion. If you want a sorted list, *ListMaker* will print letters to only those

people who have satisfied the requirements of your sort. *ListMaker* will also sort your lists in alphabetical or numerical order.

Entering Data

The first order of business in using *ListMaker* is to create the list itself. You must first set up a *template* with which to work; *ListMaker* will not accept data without it. To create the template, you simply enter the various fields or categories you wish to include in the list. A field is one specific item, such as a last name, a phone number, an area code, a bus route, or a business title.

When the template is finished, you can start to enter data. You enter data in *records*. A single record contains all the various fields for one individual. That is, a record will have the name, phone number, area code, address, business title, and so forth for one person. That way, when it comes time to add, delete, or change your list, you can do so on a per person/per record basis.

ListMaker makes entering information a snap: Since you have already created the data template, *ListMaker* asks for the information one piece at a time. Some systems lack this feature and require you to enter a stockpile of data without prompting. It isn't hard to drop an impor-

tant bit of information this way.

After the data entry is complete, you can review your handiwork to make sure you have made no mistakes. *ListMaker* provides for a search and change feature to correct problems.

Printing

If your aim is to create a mailing list or a stack of mailing labels, you need only instruct *ListMaker* to print out your list. The program will print out only that information you tell it to: such as name, address, and zip code, omitting company affiliation and phone number.

If your aim is to create a merge printed document, you must write the form letter that you wish to send. *ListMaker* includes its own simple word processor, so you can create letters without additional software. Unfortunately, the program will not communicate with other software, such as *Scriptit*, so you must use the somewhat limited text editor to write your documents. There is no fancy underlining, boldfacing, justified printing, or line centering available.

Like most other merge-printing programs, when you create a form letter, you assign each *variable* within the letter a special number. That number corresponds to the fields found in your list. When the form letter and list files are

ListMaker, continued...

combined, the program automatically inserts the contents of the fields into the marked spots in the form letter.

Sorting

There are several ways you can create a sorted list, one that contains only records of a specific type (area code 212, for example). One way is to create a new list using the List Split Option. This is a roundabout way of doing it, but with practice, it works nicely. You get a permanently sorted list, which comes in handy if you need to print out the sorted version often.

The easier way is to answer no when the program asks "want to print the whole list" when you are setting up the printing options. On answering no, *ListMaker* displays its Search/Change menu and offers you the choice of a text string search, an exact match search, or a single character search.

You might use the exact match search to look for 212 in the area code field. You can search for such things as last names that start with M, clients that have a zip code with the 0 in the middle of the number (10017), or just about anything else. *ListMaker* searches on one key only; you can't (without creating sub-sorted files with the List Split Option) ask it to search for all sales people who have an area

code of 212 and with whose last names start with M.

When printing labels and lists, you can format the way the data will appear on paper. For example, if you are printing mailing labels, the program assumes you are using standard 3-1/2" by 7/8" mailing labels and formats the printout to fit within these boundaries.

If you are just printing out a list, you can tell *ListMaker* to skip one or more spaces between items. When printing out form letters, you can specify: the maximum number of characters per line, the position of the left margin, the length of paper, the maximum number of lines per page, whether you want a heading printed on each page, and whether you want to print continuously (presumably on fanfold paper) or pause between pages.

Summary

It is obvious that *ListMaker* is a powerful program, especially when you consider that it costs less than \$100. On the whole, the program operates without problem and is easy to learn. The documentation is much better than average, but it isn't quite as good as I had hoped. I felt that a product coming from Reader's Digest would be more complete.

The manual is written for the computer novice in a tutorial format, which is fine,

but it offers no advanced information other than a sketchy flow chart. For example, use of the List Split Option as a sorter was not discussed in the manual; rather the feature is explained as a way to cut an overly large list down to size. A complete, if not totally separate, reference manual would be welcome.

On the positive side, the manual comes with a nearly complete glossary and a quick reference section. The quick reference section is laid out by menu and explains what each menu item does. The manual contains both a complete table of contents and an index.

One item I look for in any list management program is the ability to create a fully merged document file (a file in which completed form letters reside), in addition to the standard merged document print-out capability. Alas, *ListMaker* does not offer this useful feature.

Finally, because the program is menu driven and interactive, it is extremely easy to use. Even when I tried to enter erroneous data, the computer did not crash, nor was I dumped out of the program. Error handling was excellent. When trouble occurs, the program displays an error message in plain English. A section in the back of the manual further explains the error messages. □

Announcing **PEN-PAL™** New efficiency in word processors— only \$59.95

PEN-PAL™ is the new word processor that maximizes your output. For home or business PEN-PAL gives you the flexibility you need to do all of your writing. From memos to manuscripts, from reports to recipes you produce professional results.

At \$59.95 PEN-PAL is your best buy. Functions found in more expensive word processors can be found in PEN-PAL — like:

- 5 help "menus" for display
- Horizontal scroll to 254 characters
- 40 and 80 column formatting
- Automatic page numbering and heading
- Centering and left and right justification
- Block copy moves, store and delete
- Global word search, replace and delete
- Accepts 16K RAM card to increase file storage
- 2 display modes (editing and formatting)

- Paddle controlled horizontal and vertical quick scrolling
- Takes advantage of Apple IIe® new features (upper/lower case, arrow keys, delete, etc.)

For efficiency, economy and performance buy PEN-PAL. Only \$59.95 at your local software retailer or call 800-428-3696 and reference Ad SW101. In Indiana call (317) 298-5400.

PEN-PAL, NO. 26115, \$59.95

Available for Apple II®, Apple IIe®, 48K, one disk drive.

Call us today (312) 382-5244 for best prices and best service.

PROFESSIONAL WORDPROCESSING PACKAGE

This wordprocessor is specially designed for the Commodore-64 utilizing the latest techniques. Allows powerful text editing capabilities without long hours of orientation or training. Complete cursor and insert/delete key controls are used. Block movement and/or duplication, line insertion and/or deletion, automatic centering, margin settings, tab settings, copy, disk or tape handling, and all printer types. Up to 99 continuous pages of text can be output to the printer. List \$89.00.

COMPLETE DATABASE PACKAGE

A user friendly data base system that makes information easy to find and store. You can add, change, delete, and search for data. Print the information on a printer in any format desired. When combined with the word processor pack you have a powerful merge program that allows custom documents and personalized mailing lists. List \$89.00.

COMPLETE ACCOUNTING PACKAGE (Home or Small Business)

This general ledger program is perfect for small business as well as home. It utilizes a double entry bookkeeping system. You only need enter one transaction and the computer will handle the other. All accounts are user defineable and will build for 1 year, resulting in a file of all transactions by account number, month and year to date. Each month a current month's transactions can be viewed at any time (99 accounts 187 entries per month). With this accounting program you will be able to monitor your financial growth as well as your expenses. List \$59.00.

COMMODORE-64 PROGRAMMERS REFERENCE GUIDE

This is the in-depth guide that goes into the heart of the 64. All aspects of the basic and machine language are covered. (A must for anyone wishing to program the Commodore-64). Sale \$16.95.

• LOWEST PRICES • 15 DAY FREE TRIAL • 90 DAY FREE REPLACEMENT WARRANTY

All items subject to availability and price change. NOTE: We stock manufacturer's and third party software for most all computers on the market. Call today for our new catalog.

The Missing Links for Pascal

Serious Pascal programmers, particularly those whose business programs involve data entry, will welcome three new products for the Apple from Link Systems.

LinkDisk, a disk manipulation utility; *LinkVideo*, a screen utility; and *LinkIndex*, a utility for rapid key retrieval are designed to facilitate program development in Pascal.

LinkDisk is a free-standing Pascal utility program which provides an assortment of disk maintenance functions absent from the Apple Pascal Filer: translation of DOS 3.3 binary and text files to Pascal files, comparison of files and volumes, examination and hexadecimal editing of disk files, and listing of text files on the printer. The operation procedures of *LinkDisk* are similar to those of the Apple Pascal Filer.

LinkVideo and *LinkIndex* are not complete programs, but packages of procedures (*units* in Apple Pascal terminology) which may be called from user-written application programs. They are intended for the serious programmer of data entry, storage, and retrieval applications for business—the programmer for whom time spent reinventing the wheel is money lost. The procedures of *LinkVideo* provide screen control functions and “operator-proof” input of common data items such as telephone numbers, social security numbers,

John J. Hirschfelder

and strings, and include some basic data validation. *LinkIndex* handles an index file associated with a user's data file, providing a capability comparable to the Indexed Sequential Access Method of Cobol.

Each of the three products is provided on a disk with a user's manual. All files on the disks may be readily copied for the use of the original purchaser using

the Transfer function of the Pascal Filer.

LinkDisk

LinkDisk, the utility program, provides four groups of functions: DOS 3.3 file translation, file and volume comparison, file enumeration and editing, and listing.

With a DOS 3.3 disk in one of the disk drives, *LinkDisk* displays a catalog of the disk in either of two formats. One format is similar in content to the DOS CATALOG display but is arranged differently. The other format provides more information including, for binary files, the start address and length. Upon command, *LinkDisk* translates a selected text or binary file on the DOS 3.3 disk to a Pascal file on the disk in the other drive.

The Compare function of *LinkDisk* will compare, byte for byte, two Pascal files or two whole volumes, to determine whether a verbatim copy has been correctly made. It will also compare two DOS 3.3 disks.

The Examine function permits byte-by-byte display and editing of a Pascal file (or volume). One disk block is displayed at a time, with a byte-sized (two-character) cursor. Data can be displayed in ASCII, hexadecimal, or mixed. In ASCII display mode, non-printable characters are displayed as “?”. In mixed mode, printable characters are displayed by their ASCII characters and non-printable characters are displayed in hexadecimal. Editing of a block display

CIRCLE 130 ON READER SERVICE CARD

Missing Links, continued...

is done by using the standard Pascal cursor controls (left-arrow, right-arrow, ctrl-O, ctrl-L) and by typing corrections in hex.

The List function is ideal for obtaining printed listings of large Pascal programs whose text extends over several text files.

The List function is ideal for obtaining printed listings of large Pascal programs whose text extends over several text files. The user is presented with the directory of a volume from which he selects those text files he wishes to list. He may also specify whether he wishes files ordered alphabetically by name, by date, or in the order found in the directory, as well as the number of lines per page, whether or not pages are to be titled, and whether or not lines are to be numbered. Then the entire list of selected files is printed.

The *LinkDisk* user's manual is concise and well written. The program itself is mostly self-explanatory in its operation, so there should be little need to refer to the operating procedures after one reading. The procedure descriptions in the manual occasionally omit a prompt present in the program. For instance, the Select Option of the List function prompts for a unit number, which is not mentioned in the procedure. The manual also fails to mention that the disk volume supplied is named DISKS:. The experienced Pascal user will not be bothered by these omissions, but they may be annoying to a novice.

LinkVideo

LinkVideo is a package of fifteen Pascal procedures useful to the writer of data entry programs. One procedure, VDT (for Video Display Terminal) is called with one parameter which selects one of the following high level screen operations: home cursor, clear screen, clear the line that the cursor is on, erase from cursor to end of line, erase from cursor to end of screen, and move cursor up, down, left, or right.

The remaining procedures are output and input procedures for seven data types: string, phone number, Boolean, social security number, date, integer, and long integer. In each case, the calling program provides screen position (row and column). For string, integer and long integer, a field width is also provided by the caller. On input, the

calling program provides a default value which is displayed. Then the operator is afforded an opportunity to change it.

Each character typed by the operator is checked for validity. Invalid characters are ignored, and the computer beeps. The cursor is constrained to the data field displayed and the first position to the right of it; no operator error short of hitting RESET will prevent a valid data item from being returned to the calling program when the operator types RETURN. Therein lies the principal benefit of this procedure package.

Punctuation in dates, phone numbers, and social security numbers is fixed and the operator can't change it; only significant digits are accepted. In the case of long integers, the calling program specifies the position of an assumed decimal point; the point is displayed, and the operator can't change it. The validity checking on dates is deficient. In the month field, the numbers 0 through 12 are accepted. In the day field, the numbers 0 through 31 are accepted and 40

creative computing

SOFTWARE PROFILE

Name: LinkVideo

Type: Keyboard data input utility

System: Apple II 64K

Format: Disk (16 sector Pascal)

Language: Pascal source code

Summary: Error-tolerant keyboard input utility

Price: \$54.95

Manufacturer:

Link Systems
1655 26th Street
Santa Monica, CA 90404
(213) 453-1851

and up are rejected, while days of 32 through 39 are garbled with no error indication.

The user's manual, like that of *LinkDisk*, is concise and well written. It includes detailed descriptions of the procedures and their parameters, a discourse on the unit concept in Apple Pascal and the relative merits of regular and intrinsic units, and a procedure for installing the package in the SYSTEM.LIBRARY file. The procedure, using the LIBRARY program supplied with the Apple Pascal System, is entirely standard but long, so its complete presentation here is welcome even to the expert.

The procedure contains one error: the response to the NEW LINK CODE prompt should be VIDEO:VIDEO, not BLANK:VIDEO as stated in the manual. Again, the manual has failed to mention

the name of the disk volume.

The disk supplied contains the complete source and object code for these procedures, the source and object code for an assembly language subroutine which it uses, and the source and object code for a demonstration program called TESTVIDEO. After installing the package in his library, the user should run the demonstration program to get an operator's feel for how these procedures work. He should then print and peruse the source code for both the demonstration program and the procedures. He will then be ready to write his own nearly foolproof data entry program with a minimum of effort.

LinkIndex

LinkIndex is the most sophisticated of the three products. It provides the serious business programmer with a capability in Pascal comparable to the Indexed Sequential Access Method (ISAM) in Cobol. *LinkIndex* is not an ISAM implementation; rather, it is an index file handler. The application programmer must do his own handling of his data file; *LinkIndex* won't touch it. Thus, while the index is invisible to the programmer in ISAM, it is highly visible in *LinkIndex*—but it is seen only through a set of procedures providing high level operations on the index.

To build a data storage and retrieval application using *LinkIndex*, the user sets up a random access data file, so that when he adds a record to his file, he knows its record number. Then he uses one of the procedures of this package, called EnterKeyInBTree, to place a key in the index. The key contains the record number of the newly created record and the value of a field in this record which the user wishes to use to retrieve the record. He may enter several keys for the same record. Then, when he wants to retrieve a record, he provides the key

creative computing

SOFTWARE PROFILE

Name: LinkIndex

Type: File-index handling utility for keyed record retrieval

System: Apple II 64K

Format: Disk (16 sector Pascal)

Language: Pascal P-code

Summary: Rapid key retrieval unit

Price: \$195

Manufacturer:

Link Systems
1655 26th Street
Santa Monica, CA 90404
(213) 453-1851

Missing Links, continued...

field value to another procedure, called KeyInBTree. This procedure provides the record number (or signals that the key can't be found). With the record number, the file operations SEEK and GET can be used on the data file to retrieve the record.

The complete set of procedures in this package is as follows: CreateBTree creates a new index file. OpenBTree opens an existing index file. EnterKeyInBTree inserts a new key in the index. RemoveKeyFromBTree removes a key from the index. GetNextKey finds the next larger key in the index (for sequential access in increasing order). GetPriorKey finds the next smaller key in the index (for sequential access in decreasing order). And CloseBTree closes an index file.

Actually, all but the last of these are Boolean functions, which return TRUE if the operation was successful and FALSE otherwise. If FALSE, a variable BTreeResult contains an explanatory code. CloseBTree always succeeds.

The user's manual, at 50 pages, is the most comprehensive of the manuals for the three products. It includes an introduction, a tutorial using a phone list program as an example, specifications of the procedures and their parameters, and a programming guide covering a

variety of technical issues such as memory requirements, file space planning, and error handling.

Appendix A is a source listing of the interface portion of the package—unlike *LinkVideo*, source code is not provided. Appendix B is a brief but scholarly discussion of file access methods, including ISAM and the binary tree algorithms used in *LinkIndex*. Appendix C contains directions for installing the unit in SYSTEM.LIBRARY. It is similar to the comparable portion of the *LinkVideo* manual and contains the same minor error—the volume supplied is named LINDEX:, not BLANK:.

The disk supplied contains the code file for the unit, called BTREE.CODE; a text file, DOC.TEXT, containing additional documentation; and seven files relating to the phone list example including source code, object code, and data.

DOC.TEXT contains a listing of differences among versions, describing which bugs were fixed in which, guidance on file size and heap space estimating, and a discussion of the Apple III version. It also contains the specifications for the GetPriorKey function, which was added to the package after the manual was printed. The information on bugs in prior versions is es-

pecially welcome, as it indicates a continuing interest on the part of this vendor in supporting and improving his products.

LinkIndex is one of the most technically advanced software products for the Apple that I have seen. For the serious programmer of business applications, the effort required to understand and use this package will be repaid with improved program performance with less programming effort. ☐

CIRCLE 408 ON READER SERVICE CARD

COMPUTER KITS – FROM \$69.95

LNW SEMI-KITS can save you hundreds of dollars. By obtaining your own parts at the lowest possible cost and assembling the **LNW SEMI-KITS**, you can have the most highly acclaimed microcomputer in the industry – the **LNW80**. The **LNW SEMI-KITS** are affordable modules. You can start with a modest cassette system and expand to a full 4Mhz TRS-80 compatible system with 5 or 8 inch double density disks and color at any time.

A. LNW80 CPU – Made of high quality FR4 glass epoxy double sided circuit material, with plated-through holes and gold edge connector. It is fully solder-masked and silk screened. Here are just some of the outstanding features you will have when your **LLNW80** CPU board is fully assembled: • 16K RAM • Color and black and white video • 480 x 192 high resolution graphics • 64 and 80 column video • 4 Mhz Z80A CPU • Upper and lower case display • 500 and 1000 baud cassette I/O – **\$89.95**

B. SYSTEM EXPANSION – Expand the **LNW80** computer board, **TRS-80** and **PMC-80** computer with the following features: • 32K memory • Serial RS232C and 20Ma port • Real time clock • Parallel printer port • 5 inch single density disk controller • Expansion bus (screen printer port) • Onboard power supply • Solder-masked and silk screened legend – **\$69.95** (tin plated contacts) – **\$84.95** (gold plated contacts)

C. KEYBOARD – 74 key expanded professional keyboard – includes 12 key numeric keypad. Fully assembled and tested. – **\$99.95**

D. COMPUTER CASE – This stylish instrument-quality solid steel case and hardware kit gives your **LNW80** that professional factory-built appearance. – **\$84.95** Add \$12.00 for shipping.

E. SYSTEM EXPANSION CASE – This stylish instrument-quality solid steel case and hardware kit gives your **SYSTEM EXPANSION** interface that professional factory-built appearance. – **\$59.95** Add \$10.00 for shipping.

F. LNW80 CPU – HARD TO FIND PARTS KIT – \$82.00

G. LNW80 VIDEO – HARD TO FIND PARTS KIT – \$31.00

GREAT DRIVES. GREAT PRICES.

Floppy Disk Services offers both.

We supply the industry with high quality disk drives and peripherals. And our prices are some of the best you'll see. Floppy Disk Services is a contracted dealer for Siemens, Tandon and Shugart. Starting with their drives, we design complete packages to give you the system capacity you're looking for and the dependability you need.

We offer add-on drives for IBM, Radio Shack, Heath, Apple and most other microcomputers, all at a significant savings to you. Check the examples below and you'll see what we mean.

Apple II Add on drives	\$300.00
Apple 8 inch controller	315.00
Apple dual 8 inch system w/ controller	1165.00
FDD-100-5b 'flippy' exact HEATH add on.....	215.00
FDD-200-5 double sided 40 track drive	250.00
FDD-111-5 5ms step IBM or MOD 3 Add on	210.00
FDD-221-5 5ms step 80 track DD/DS	330.00
TEC SFD-51b 5ms 5 1/4 48TPI	215.00
FDD-100-8d 8 inch single side DD drive	275.00
FDD-200-8p Double sided 8 inch drive	395.00
FDD-211-5 (same as TM-100-2)	265.00
Custom 8 inch and 5 1/4 inch enclosures.....	Call

System packages available for all drives

Dual 8 inch system with EVERYTHING	850.00*
Dual double sided 8 inch system	1060.00*
Single 5 1/4 Heath or MOD I Add on w/case	265.00*
Dual 5 1/4 Heath or MOD I	505.00*
10mb Hard Disk for any computer	2400.00*
Magnolia controller, allows any combo 8 and 5 1/4 inch drives to be added to your H88 or H89	525.00

* 8 inch systems are fully assembled and tested, however the drives are shipped separately from the case to comply with UPS weight restrictions.

All 5 1/4 inch systems come assembled and tested.

There's much more. If you don't see what you want, give us a call between 9 am and 5 pm (ET). Chances are we'll have what you need at your price.

Featuring the Shugart Thinline Series.

Floppy Disk Services carries the new Shugart Thinline Dual 8 Inch Drive (Model SA-860). It's a double-density drive, with dual head for a storage capacity of 1.25 megabytes per drive. The system includes our custom cabinets, comes fully assembled and tested, and uses the Power One CP-206 supply, the standard of the industry. Special features include external drive select using DIP switches, and cable connector on the rear of the cabinet for ease in connecting to your system. Floppy Disk Services designs and builds these systems from the ground up to maximize efficiency and minimize space requirements. Available with Tandon Drives also.

Custom Enclosures. At Floppy Disk Services, we also sell disk drive enclosures, designed by our own experts to be functional and attractive. And our quantity pricing is so competitive, we invite dealers and group purchasers to call.

Thinline/Half Height Specials. Floppy Disk Services has just contracted with Shugart and Tandon, and we're carrying their half-height 5 1/4 and 8 inch systems. If you would like some unbelievable prices on SA-455, SA-465, TM-848's and others, call today! We are legitimate contracted dealers—no middle-man.

Repairs, too. Have a disk drive in need of repair? We have the expert technicians to optimize your drives. Call us for info.

Due to production deadlines, prices in this ad are 2 months old, so we encourage you to call us for current prices and new product info.

PAYMENT POLICY — We accept MasterCard, VISA, personal checks & MO. We reserve the right to wait 10 working days for personal checks to clear your bank before we ship. All shipping standard UPS rates plus shipping & handling. NJ residents must add 6% tax.

Free Catalogue. If you'd like to receive our Catalogue of Disk Drives and Peripherals, just call or write — we'll mail your copy immediately. And if you want to talk with an expert about getting more out of your system, we'll be happy to help.

An Alternative To The Atari 810

Double density 5 1/4" disk drives for the Atari have finally arrived. Percom Data Company is now shipping Atari-compatible disk drives. I ordered one of these drives from my local Percom dealer as soon as I heard the announcement and within a week had one of the first drives in New York.

One of the biggest drawbacks to trying to use the Atari computer for business and serious programming has been the limited storage capacity of the single density 810 disk drives. The single density drive holds about 88,000 bytes (characters) of storage, which does not leave much room for data once programs have been stored on the disk. The

**The new double
density disk drive from
Percom allows
approximately 176,000
bytes of storage.**

double density disk drive from Percom allows approximately 176,000 bytes of storage.

The single unit disk is about 50% heavier than the Atari 810 drive and is encased in a solid metal enclosure. The drive stands about 6 1/2" high, by 4 1/2" wide and 11" deep. Two of these drives take the same amount of desk space as one 810 drive because the Percom drive is mounted vertically,

Winston Lawrence

while the Atari 810 is mounted horizontally.

The Percom drive comes with a manual which explains the installation and checkout of the drive system. My manual was marked Preliminary Copy and several sections were left blank with a

notation that the information would be included in a later version.

Nevertheless, the actual installation of the drive was easy, and the manual did explain how to attach the drive to Atari computers with no other drives and to Atari systems with one or more 810 drives. The drive came with the familiar Atari connector cable and plugged in just like any other peripheral device.

It is important to note, however, that when the Atari system does include 810 drives, the Percom controller drive *must* be drive number one.

Winston Lawrence, Wilaco Consultants Corp., P.O. Box 1272, Jamaica, NY 11432.

Percom, continued...

The back of the Percom controller drive has two Atari connectors and a white 34-pin connector. This connector is used when adding additional Percom drives and will be very important in the future. It can be used by the controller to control additional 40-track double density drives, 80-track drives, and even 8" drives.

Only the first Percom drive must have the controller card installed. The controller can then control three additional drives. If you were to add two additional controller drives (each of which controls three add-on drives), you could have an eight-drive system in place of the maximum of four 810 drives.

Additional Percom add-on drives do not require the controller cards, so the cost of an add-on drive is \$399--about half the cost of the \$799 double density drive with the controller card.

The only hardware problem I have noticed is that the cassette recorder cannot be used with the Percom unit attached. I do not use cassettes very often, so this is not a big problem for me. When I do need it, I boot the disk, then pull the connector out of the computer console I/O port, and plug the cassette recorder in. I unplug the recorder when finished, plug the drive connector back in, and continue.

The Percom drive controller determines whether a disk is single density or double density during the boot process and switches to the correct mode of operation, making it suitable for use in an Atari system even when it is the only drive in the system, as single density disks will cause the drive to operate in single density mode.

Percom supplies a Basic demo program that changes the mode of operation of the unit from double to single density, or from single to double density. Another utility supplied by Percom, BLD, is used to convert the Atari DOS 2.0S to work with double and single density drives. Percom does *not* supply a DOS with its drives, so the purchaser must get a copy of DOS 2.0S before using the system.

The DOS works the same as the unmodified Atari DOS 2.0S, however, the Percom installation manual notes that the duplicate functions (file or disk) will not work between double density and single density disks. The copy file on the DOS menus can be used to copy a file or an entire disk using the *.* wildcard as file names. The duplicate functions *will* work if the Percom disk is in single density mode *and* the disk was formatted in single density mode.

Percom has provided a utility called SDCOPY for users who have only one disk drive. SDCOPY is used to copy

(duplicate) disks or files of different densities.

The following steps must be taken to create a double density DOS.

1. Place the DOS 2.0S disk into the Percom drive and boot the system.

2. Replace the DOS disk with the utility disk supplied by Percom and run the BLD utility.

3. Remove the Percom utility disk, insert a blank disk and, using the DOS menu, format this disk.

4. Select the write DOS option from the menu and write the modified DOS back to disk.

You now have a double density disk which can be used only in the Percom drive, but which will allow normal operation with the 810 if you are also using 810 drives.

Percom does not review the DOS installation procedures provided in the Atari DOS 2.0S manual, and you should ensure that the DOS is set up for the correct number of disk drives. I had several 160 errors attempting to use the Percom disk after installation until I realized that I had originally set up my DOS for single drive operation. It is a good idea to reread the Atari DOS manual if problems occur after installing the unit.

The Percom disk drive works and has performed flawlessly over the past six weeks. As a side benefit, it is faster than the Atari 810 drive so that I/O operations to the drive take a noticeably shorter time. Percom has not released any information regarding the internal operation of the drive, but at least one command has been added to the original Atari disk commands.

Percom's drive controller demonstration program shows a 78 (decimal) command which apparently causes the drive to return 12 bytes of information containing the number of tracks in the drive, the number of sectors in a track, and the number of bytes in a sector. This command does not return any useful information when sent to an 810 drive. The other disk commands (PUT SECTOR, PUT SECTOR WITH VERIFY, GET SECTOR, FORMAT DISK, and STATUS) work the same as they do with the 810.

Atari computer owners contemplating the purchase of a first or second disk drive should give serious consideration to the Percom unit. Although the \$799 list price is nearly 50% higher than the list price of the 810, double density disks and the capability to control 8" drives make this a serious competitor.

The biggest problem at present is a lack of software to control these new drives and the Atari 810 drives at the same time.

Percom Data Company, 11220 Page-mill Rd., Dallas, TX 75243. □

WE DIDN'T MAKE IT CUTE,

The Grizzly™, EPD's uninterruptible power system is as tough as the animal it was named after. Like its namesake, don't let its looks deceive you. This compact system plugs directly into any standard outlet and is ready to go. All you need to do is plug what needs protection into it, flip The Grizzly on and proceed with your normal routine. In the event of a power-line problem such as a brownout

WE MADE IT TOUGH!

or blackout, The Grizzly will take over instantly delivering power at full load for up to twenty minutes. Simultaneously, its sonar alarm will sound signaling you to close out files and shutdown or giving you the option of allowing line power to return.

Functioning as a source of back-up or simply removing submicro-second overvoltage line transients "spikes" or "glitches" from electrical circuits, The Grizzly gives you confidence in your ability to operate at peak performance and eliminate data base loss.

It's maintenance-free, warranted for one year and backed by EPD's Lloyds of London-insured guarantee. It's tough. It's The Grizzly. Available through your local dealer.

Products for VIC 20® and CBM 64®

That are Out of This World.

SOFTWARE

HARDWARE

SOFTWARE

Word Wizard For The Vic 20®—(Requires at least 8K memory expansion) A user friendly WORD PROCESSOR with optional joystick control. Easy edit and string manipulation commands that follow the standard format. Full use of function keys for ease of use. 100% machine language with Delete Word, Search functions and Full Justification. Use VIC Graphic printer, or any centronics compatible printer connected to the user port. On Tape (supports disk). **\$34.95.**

ZAP!—Climbing the corporate ladder could be fun except for all that falling paperwork. This Hires arcade type game allows up to 4 players to advance through each floor and change levels to scale the corporate ranks. Be careful, it's easy to be ZAPPED! CARTRIDGE for VIC 20®. **\$29.95**

Bomber Word—A unique graphic word game on cartridge that provides the full thrill of arcade action. Complete with six modes of play options for added enjoyment. Play against the computer or another player. 6 to adult. For VIC 20®. **\$29.95.**

Tic Attack—A fast action arcade game on Cartridge that challenges all of your dexterity. Written in machine language for special audio & visual effects. Over 100 levels of play. High score indication. For VIC 20®. **\$29.95**

Dot-A-Lot—As you wander through the maze of life collecting Berries, you happen upon some magical fruit. Pick one and the treasures appear, but the Meanies are out today looking to spoil your fun. Defeat them and continue on to a higher level. An ever changing maze plus arcade type animation and sound will provide a real winning CARTRIDGE for the VIC 20®. **\$29.95**

Triple Play—Three word games that are both fun and educational. The games that are included are CROSSWORDS (requires at least 8K expansion). Five complete puzzles are included and each puzzle has up to 100 different words. CRYPTO-SOLVE will help you solve those cryptic messages found in newspapers, books, and magazines with a

systematic computer technique. Included are approximately 50 different puzzles. You can even enter your own cryptic messages. HIDDEN WORDS will display a matrix of seemingly random letters on the screen. Upon closer inspection, you will be able to find many words. Included are approximately 25 different puzzles. For VIC 20®. **ONLY \$29.95 for all 3**

Sketch Pad & Char-Gen—This hi-resolution drawing program will allow you to draw pictures in detail. Use either the keyboard or optional joystick. A fill command will allow you to fill a block and other commands allow you to easily clear the screen. You can also save and load pictures. Char-Gen is a simple to use custom character generator that will allow you to design different characters for each printable key on the computer. This program is an excellent device to design game creatures, foreign alphabets, secret symbols, or other special characters. One set is included and you can make and store others quite easily. Both for VIC 20®. **ONLY \$24.95**

HARDWARE

Expand-O-Ram—16K Expansion Board for the VIC 20® with reset, memory write protect, full memory allocation, plus TWO expansion slots. Like having 2 products in 1. Can even be used as a cartridge development system. **\$119.00**

Universal Tape Interface & Duplicator—(Use on the CBM 64® and VIC 20®). With this device, you can easily load, save or even duplicate tapes easily with your recorder. Full 3 LED indication of Data transfer makes this the most reliable way to Load, Save and Duplicate. A complete I/O device with extras. NOTE: Duplication requires 2 recorders. **Only \$49.95**

Universal Parallel Interfaces—Now you can use most any parallel Centronics® type printer with your VIC 20®/CBM 64®. The inexpensive model will allow you to access your printer through the user port. This cable and driver is only **\$19.95**. Our other model from TYMAC is more extensive with graphic capabilities. Call or write for more information and prices.

**Dealer and Distributor
Inquiries Invited**

NOTE: We solicit hardware and software items for the VIC 20® and CBM 64®. Royalties, license fees, or outright purchases can be negotiated. CBM 64® & VIC 20® are Registered Trademarks of Commodore Business Machines Inc.

More Print About Printers

As we have said on more than one occasion, the topic of microcomputer printers is quite a fast-changing one. It is extremely tough to cover the beat with continuing timeliness, and anything approaching consistency of expectations. Perhaps one answer would be to devote a monthly column to the subject. In any case, we last wrote about printers in the March issue of this year, and as that now somehow seems like about 10,000 years ago, we're due for at least a summary follow-up.

Stop the Cards and Letters, Folks

We have received a relative torrent of mail concerning that original piece, which included critical reviews of thirteen printers. Most of the mail was from owners of specific machines or from manufacturers criticizing us for being unfairly critical. We didn't mean to make anyone feel defensive about his choice in printers. None of the printers we evaluated received a rating of fewer than two stars, which indicates we felt none of them was substandard or unacceptable.

While the SCM TP-1 took a bit of a thrashing, we will admit, we did mention that the quality of the print for the price was impeccable. Okay, we were hard on printers with a great deal of plastic in their construction, reflecting perhaps a personal prejudice. If you are the owner or marketer of a machine that we criticized in one way or another, please realize that we respect your right to disagree with our conclusions. We stand by our factual statements, however, with very few exceptions.

John Anderson

Allow us to enumerate those few exceptions. One concerns the Anadex Silentscribe printer. We said in March that the printer was bottom-only loading, and therefore required a slotted printer stand. Anadex politely pointed out that this is not true, and we recently confirmed that continuous-form paper can be fed between the rubber feet on the bottom mounting of the unit and out the front or back side. The paper still must feed up through the narrow slot on the bottom of the printer, however, which is an awkward process to facilitate without a slotted stand. In all fairness, we should note that this very design feature helps the Anadex unit remain extremely quiet during use.

A couple of typographical errors also caused consternation. In the printer comparison table, the list price for the Qantex 7030 is incorrectly listed. The price should be \$1995. And, contrary to its headline and the conventions of Strunk and White, the spelling of the product is Qantex. Apparently someone in typesetting couldn't abide the sight of a *Q* without its sidekick *U*, and so provided one.

The phone has been busy too. C. Itoh called (not Mr. Itoh personally, which was disappointing, since we have always wanted to ask him what the C stands for) to express dismay with the quality of the print sample in the output comparison chart. Upon reinspection of the sample, we had to concur—the print quality of the Prowriter is better than its faded

sample attests. The reason? A dry ribbon on our test unit. As we mentioned in the glowing Prowriter review, the unit was a favorite of an ex-editor of ours, and saw quite a bit of trouble-free use. The sample we took came from the last gasps of an old ribbon.

Then there is the custom cable issue, upon which we have caught more than a bit of flak. Part of our overall printer ratings were based on ease of installation and interfacing. Obviously, if you are a user who has had the machine installed or a custom cable made by an outside source, this will not be an issue for you. Perhaps we did grow a bit cranky about custom interfacing. We just so wish that a uniform standard would emerge, so that the expense of outside installation would become in nearly all cases unnecessary.

Conversely, we were chastised for spendthriftiness by a reader who took offense at our criticism of spool ribbons, and rightly so. There we were extolling the convenience of cartridge ribbons, while failing to point out that they cost a good deal more than spool ribbons. We admit that we counted ease of ribbon replacement as a factor in printer ratings without an offset concerning their cost. Another reader brought up the possibility of reinking spools, and suffice to say we don't wish to "dirty our hands" in that issue right now. It is true that spools can be reinked more readily than cartridges.

Enough qualification. Onto the matter at hand, which happens to be a review of the finest black and white printer listing for under \$1000 that we have seen to date.

MT-160L, continued...

Tally-Ho

It has been quite a while since a printer has caused as much excitement around here as the Mannesmann Tally MT-160L. The unit is compact, fast, relatively quiet, capable of friction as well as tractor feed, has a truly letter quality correspondence character set, and is a snap to program and use. Like the MPI 150G keypad model that impressed us in March, the MT-160L programs directly from a control panel on the front of the printer. The MT-160L takes programmable convenience one step further, and instead of a numeric keypad, offers buttons labelled "yes" and "no" with which the user may answer questions asked by the configuration menu (see Figure 1).

Printing parameters may be set through the host computer, or from the control

panel. By pressing the yes and no keys simultaneously, the MT-160L will automatically print out the configuration menu, by which all parameters may be set. By pressing the no key alone, current parameters are printed out (shown in Figure 2). There are no recessed DIP switches to set incorrectly or in which to break pencil points, and all parameters report their status in a most civilized manner.

The self-reporting feature is one usually seen only in printers costing twice the price of the MT-160L. The singular lack of hard-to-reach DIP switches is unique, and a very refreshing approach, which we pray will be copied. It is now reasonable to expect an intelligent printer to configure itself to your desires—without calling on you to "hard switch" it at all.

Under the hood of the MT-160L.

The Keypad on the unit makes configuring the printer a very simple process.

The MT-160L has a totally unconventional, but pleasing external design.

Figure 2. Status report.

By pressing the "test" key, the self-test mode is initiated (See Figure 3). The mode can be cycled through pin graphics tests, and the resident character set will be used to display a sliding ASCII pattern.

Okay, so the MT-160L is one smart printer, and scores well on ease of use.

What about its performance?

In a word, remarkable. Figure 4 lists the specifications of the unit, which rival, and in many cases exceed, the specs of high-end units such as the Qantex 7030, which so impressed us in March. At less than half the price and less than half the size, that's quite an accomplishment.

Some specifics: The MT-160L offers four pitches, over a range of 10 to 20 cpi, and in the 20 cpi mode, can squeeze 160 columns onto its maximum paper width of 10 inches. Double width capability adds another four character spacing options. The default 10 cpi character set is dark, clear and fast, at a claimed speed of up to 160 cps. Because linefeeds are fast and sure and logic-seeking bidirectionality guides the printhead, the MT-160L is among the fastest small printers you'll find.

Figure 5 gives a sample of the default font at 12 cpi. The L in the MT-160L model number stands for "letter quality." Look back at Figures 1, 2, and 3 for samples of the 40 cps dual-pass character set—the word that comes to mind is *superb*. Though it is much slower than the default, the letter quality font is still a good deal faster than a daisy wheel, and in our opinion, of comparable quality. It is really hard to believe that its print was created by a dot-matrix machine. Tally-ho, indeed.

A Fusillade from Canon

Upon first glance, it seems quite ordinary; just another compact dot matrix printer for the under \$800 market. Then it comes time for a classic double take, and for some, a hard swallow. Linefeeding very quietly from the top of the unit, you see, is a page printed in vibrant

color—make that seven vibrant colors. So don't be misled by the quiet. That low hissing rhythm is very dramatic. At less than 50 dB, it is the roar of Canon entering the microcomputer printer race with a walloping bang.

The Canon A-1210 color printer is

The Canon A-1210 color printer: seven colors for under \$800, in ink-jet dot matrix. And it takes up no more space than an MX-80.

```

Figure 3. Cycling through a self-test. Reproduced at actual size.

Both serial and parallel interfacing is possible, using the most popular (and most nearly standard) connector cables. These are the 25-pin male DB-25 for serial connection, and 36-pin male Centronics style for parallel connection. The two female connectors sit side by side on the rear

panel of the printer, and make installation of the unit as painless as possible.

As the Mannesmann Tally MT-160L is of European origin, allowance has been made for seven foreign character sets and easy selection of them. And though it may be a stereotyped cultural generali-

zation, the term "German precision" came to mind more than once. The unit is superbly engineered and very reliable. In two months of heavy use, the only problem we had was a bit of printhead lock-up, which was caused by a dustball on a drive axle. The end of the dustball signi-

capable of printing said seven vibrant colors on plain paper, using what it calls "drop-on-demand" ink-jet technology. It can print standard and enlarged characters and hi-res graphics of up to 640 dots per line, at a claimed speed of up to 40 cps. The most impressive statistic we can quote, however, is the suggested price of the unit, now set at \$795 list. Could this be the next product to set the printer industry on its ear? The early returns are impressive—we've seen a unit and it does work—beautifully. And in such exquisite quietude.

Watch for an in-depth review of the Canon A-1210 in an upcoming issue. For more information contact Canon USA, One Canon Plaza, Lake Success, NY 11042. (516) 488-6700.

MODEMS

SMART BUY in MODEMS - Signalman

1200 and/or 300 baud, direct connect, automatic answer or originate selection, auto-answer/auto-dial on deluxe models. 9v battery allows total portability, full one year warranty.

IOM-5600A 300 baud direct connect \$89.95
IOM-5610A 300 baud Deluxe \$149.95
IOM-5620A 1200/300 baud Deluxe \$369.95
IOM-5650A 300 baud for Osborne \$119.95
IOM-5630A 300 baud card for IBM \$269.95

SMARTMODEM - Hayes

Sophisticated direct-connect auto-answer/auto-dial modem, touch-tone or pulse dialing, RS-232C interface, programmable.

IOM-5500A Smartmodem 1200 \$574.95
IOM-5400A Smartmodem 300 \$224.95
IOM-1500A Hayes Chronograph \$218.95
IOM-1100A Micromodem 100 \$368.95
IOM-2010A Micromodem II w/term prgm \$329.95
IOM-2012A Terminal program for MMII \$89.95

1200 BAUD SMART CAT - Novation

103/212 Smart Cat & 103 Smart Cat, 1200 & 300 baud, built-in dialer, auto re-dial if busy, auto answer/disconnect, direct connect, LED readout displays mode, analog/digital loop-back self tests, usable with multi-line phones.

IOM-5241A 300 baud 103 Smart Cat \$229.95
IOM-5251A 1200 baud 212/103 Smart Cat \$549.95

J-CAT™ MODEM - Novation

1/5 the size of ordinary modems, Bell 103, manual or auto-answer, automatic answer/originate, direct connect, built-in self-test, two LEDs and audio beeps provide status information.

IOM-5261A Novation \$149.95

S-100 DISK CONTROLLERS

VERSAFLOPPY II - SD Systems

Double density disk controller for any combination of 5 1/4" and 8" single or double sided, analog phase-locked loop data separator, vectored interrupts. CP/M 2.2 & Oasis compatible, control/diagnostic software PROM included.

IOD-1160A A & T with PROM \$359.95
SFC-55009047F CP/M 3.0 with VF-II \$139.95

DOUBLE D - Jade

High reliability double density disk controller with on-board Z-80A, auxiliary printer port, IEEE S-100 can function in multi-user interrupt driven bus.

IOD-1200B Bare board & hdw man \$59.95
IOD-1200K Kit w/hdwr & sftwr man \$299.95
IOD-1200A A & T w/hdwr & sftwr man \$325.95
SFC-59002001F CP/M 2.2 with Double D \$99.95

EPROM ERASERS

ULTRA-VIOLET EPROM ERASERS

inexpensive erasers for industry or home.

XME-3100A Spectronics w/o timer \$69.50
XME-3101A Spectronics with timer \$94.95
XME-3200A Logical Devices \$49.95

SINGLE BOARD COMPUTER

SUPERQUAD - Adv. Micro Digital

Single board, standard size S-100 computer system, 4MHz Z-80A single or double density disk controller for 5 1/4" or 8" drives, 64K RAM, extended addressing up to 4K of EPROM. 2 serial & 2 parallel I/O ports, real time interrupt clock, CP/M compatible.

CPC-30800A A & T \$724.95
IOX4232A Serial I/O adapter \$29.95

VIDEO MONITORS

Video Monitor - Jade

1000 lines, ultra-high resolution, 20 MHz ultra-high band width 9" or 12", Amber or Green phosphor, the finest monitors we sell.

VDM-750920 9" Green \$99.95
VDM-750910 9" Amber \$129.95
VDM-751220 12" Green \$129.95
VDM-751210 12" Amber \$139.95

APPLE II ACCESSORIES

DISK DRIVE For APPLE™

Totally Apple compatible, 143,360 bytes per drive on DOS 3.3 full one year factory warranty, half-track capability reads all Apple software, plugs right into Apple controller as second drive, DOS 3.3, 3.2.1, Pascal, & CP/M compatible.

MSM-12300 Add-on Apple Drive \$249.95
MSM-123100 Controller \$69.95

16K RAM CARD - For APPLE II

Expand your Apple II to 64K, use as language card, full 1 year warranty. Why spend \$175.00?

MEX-16700A Save over \$115.00 \$49.95

Z-CARD For APPLE II - A.L.S.

Two computers in one, Z-80 & 6502, more than doubles the power and potential of your Apple, includes Z-80 CPU card CP/M 2.2 and complete manual set. Pascal compatible, utilities are menu-driven. One year warranty.

CPX-62800A A & T with CP/M 2.2 \$159.95

SMARTERM II - A.L.S.

80 column x 24 line video card for Apple II, addressable 25th status line, normal/inverse or high/low video, 128 ASCII characters, upper and lower case, 7 x 9 dot matrix with true decoders, standard Data Media terminal control codes, CP/M Pascal & Fortran compatible, 50/60 Hz, 40/80 column selection from keyboard.

IOV-2500A ALS Smarterm II \$169.95

SERIAL I/O CARD - A.L.S.

Full feature serial card for modems & printers, baud rates from 110 to 19,200, CTC/RTS & X-on/X-off protocols, auto line feed. RS-232C cable interface included.

IOI-1000A A & T "Dispatcher Card" \$129.95

CP/M 3.0 CARD For APPLE - A.L.S.

The most powerful card available for your Apple! 6 MHz. Z-80B, additional 64K of RAM, CP/M 3.0 Plus 100% CP/M 2.2 compatibility, C Basic, CP/M graphics, 300% faster than any other CP/M for Apple. One year warranty.

CPX-62810A A.L.S. CP/M Card \$369.95

Introducing

GENIETM 5+5TM

5.25" Removable GENIE Winchester Cartridge Drive IBM • APPLE II PLUS • RADIO SHACK • S-100

The Genie Cartridge Drive is a revolutionary new 10 Megabyte Hard Disk Drive that includes a 5 Megabyte removable Winchester cartridge. The cartridge Drive system simply plugs into your computer, and includes all necessary software and hardware. Genie Drives are compatible with most popular software, and each cartridge replaces over 30 double-density floppy disks.

FEATURES

- 10 Megabytes of on-line storage.
- File sizes to 5 Megabytes.
- Power-on self-test.
- Easy back-ups in minutes.
- System expandable to eight drives.
- Built-in error detection and correction.
- No preventative maintenance required.
- Comes complete with all necessary software and hardware.
- MTBF 8000 Hours.
- Built-in fan.
- Operates 110/220 VAC 50-60 Hz.
- One year limited warranty.

Removable Cartridge. Imagine, 5 Megabytes in the palm of your hand. These small Winchester cartridges are only .75 inches thick and 5.50 inches square. The disk itself is completely sealed from the outside and all its hazards by a sliding door that opens only once the cartridge is firmly seated inside the drive. Long term availability of this cartridge is assured by its adoption by several well known manufacturers including **Dysan** and **Memorex**, the world leaders in computer mass storage media.

Talk about user friendly • • •

Comprehensive system utilities package. Allows eight-character names to be assigned to virtual volumes. User Can back-up to any Genie REMOVABLE Cartridge Drive, or to diskettes. Mix & Match different system file types on the same disk. System status screen messages. Up to 16 volumes on-line at a time.

Available at your local computer dealer

SCREENWRITER II THE NO. 1 WORD PROCESSOR

DON'T ASK US WHY ASK OUR USERS

"I am impressed! Support of your product is excellent and refreshing and, I might add, better than anything I have come in contact with."

LeRoy O. King, Jr., Texas

"I have used other word processing packages like Wordstar and Scripsit and you have them all beat."

Charles R. Jones, Minnesota

"The documentation is excellent... I am very much impressed with the service and attention shown to customers."

D. M. Vibbert, Iowa

"... a terrific word processing program with a great many capabilities and a lot of sophistication... a very capable word processor... so many features and functions that one may well want to use it for much more than word processing."

Interface Age March '83

"An impressive word processing program... the manual is a pleasure to use... first rate... even outclasses the much-vaunted Wordstar..."

Windfall December '82

"Any imaginable type of formatting can be accomplished... to sum it up... you might never need another word processor."

Incider January '83

We can tell you that Screenwriter II is the best-selling word processor for the Apple computer*, but only our customers can tell you it's the best. We pack it with all of the features you demand from a word-processor. Then we back it up with the finest product support in the industry. That's why people who use Screenwriter II everyday bandy about words like "unbelievable," "impressive," "excellent" and "the best." They said it; we believe it. So will you.

**Screenwriter II is available for the
Apple II/II+ and Apple IIe.**

Figure 5. Draft quality at 12 cpi. Reproduced at actual size.

Figure 6. Serviceable graphics capability.

fied the end of the problem. So much for maintenance.

The Buzz of the Fly in the Ointment

Our sole complaint about the unit is a nitpicky one, but it is well known that

really nitpicky things drive folks like us up the wall. The stepper motor on the MT-160L idles noisily, and it does so even when the unit is off-line. Hence, users will quickly learn that the MT-160L is not a machine to be left on when not printing.

That is a shame, since it practically abrogates the need for the on-line switch.

It is hard to describe the sound of the off-line Mannesmann Tally machine, which is not loud at all, merely very grating. The closest description we can give is something along the lines of a noisy refrigerator, heard through an empty beer can. It gets to you.

During actual printing, the unit is of about average noisiness; we measured it at 64 dB. The reading was made from one meter in front of the printer, while it rested on a foam printer mat, printing in correspondence mode. The noise was quite tolerable.

The operator's manual is clearly laid out, profusely illustrated, and refreshingly free of typographical errors. Although it is unindexed, its table of contents is quite thorough and should suffice in most cases. In it you'll find pin-outs for cabling and tables documenting all escape codes. If, as we suspect, the manual was translated from German, a splendid job was done.

As for the graphics capability of the machine, Figure 6 is worth a thousand words. The printer can output at 50 or 100 DPI (dots per inch), and a minimum line feed increment of 1/8 inch produces smooth, bold graphics in the same manner as it produces dual-pass letter quality print. The documentation points out that the printhead duty cycle limits the firing of any hammer to an average of 40 per cent of its maximum allowable positions over the area of a page (11 inches). We doubt that this structure will interfere with many graphics applications, save those of users who wish to produce runs of totally black paper.

The Mannesmann Tally MT-160L is a fine machine, and if you are in the market for a new printer now, you owe it to yourself to get a look at it. Although we enjoy reviewing products that we are enthusiastic about, we rarely write a review that can be paraphrased in the simple words "loved it." This review is an exception. The MT-160L printer is another stride in quality and features in the under \$1000 market. If only it printed in color, too! □

ONLY

**THE NEW ATARI 1200XL HOME COMPUTER
MAKES SOPHISTICATED GRAPHICS AND
SOUND SO EASY TO PROGRAM.**

ONLY the new ATARI 1200XL Home Computer combines custom microchip technology with 64K RAM computing power to deliver graphics and sound capabilities that are so easy to program. The ATARI 1200XL has 11 graphics modes and 5 text modes. (The Commodore 64 and Apple II-e have only 2 graphics modes and 1 text mode.) Additional text and graphics modes allow users to easily program sophisticated graphics effects with relatively few commands, taking full advantage of the 256 color variations available. The sound capabilities of the ATARI 1200XL are also easy to program. Four distinct "voices" spanning 3½ octaves are controlled by a separate microchip, leaving the principal microprocessor chips free to perform other tasks.

ONLY the ATARI 1200XL offers a keyboard featuring 8 programmable function keys controlling 16 functions in a 64K computer. (That's twice as many as the Commodore 64). Four new function keys enable you to lock and unlock the keyboard electronically, disable the screen DMA for faster processing time, generate European language or graphics characters, turn the keyboard sound on and off or access the one-touch cursor control. The unique user-definable "help"

THE NEW

key permits users to self-test ROM, RAM, audio-visual circuitry and keyboard functionality or call up assistance within complex programs. For even more help, Atari gives you a toll-free number to call for product and technical information (800) 538-8543; in California 1-(800) 672-1404.

ONLY the ATARI 1200XL offers you a home computer compatible with virtually all ATARI Computer peripherals and software (compatibility that other new computers like the Commodore 64 don't offer). There are over 2,000 programs and seven programming languages currently available for the ATARI 1200XL. New programs like AtariWriter™ and languages like ATARI Microsoft BASIC, Assembler Editor, PILOT, Pascal, ATARI BASIC, Forth, and Macro Assembler offer you even greater programming challenges and flexibility.

ONLY Atari puts so much more in the new 1200XL Home Computer so you get so much more out of it.

ATARI® 1200XL™

CIRCLE 117 ON READER SERVICE CARD

Over 125,000 Educators Have Attended Our BASIC Computer Programming Courses Free of Charge

How About You?

Computers are Here—Are You Ready to Use Them? All across the country, computers are becoming more and more important in our daily lives. Teachers and administrators who use computers are finding them a valuable instructional tool in all subjects and at all levels. And students are responding with enthusiasm, learning about computers by using them. Clearly, as an educator, you feel the need to learn about them, too. But how?

Where Can You Find Help? You can do what more than 125,000 educators have done and become "computer literate" at your nearby Radio Shack Computer Center. It's easy to arrange. Whether you're interested in programming or just learning how to use a computer, you'll find a class to suit your needs.

Introduction to BASIC—At the end of this 10-hour beginners' course, you'll be able to write simple programs in the BASIC language. Normal cost: \$49.95, but the class is *free* to educators.

BASIC Programming—This 10-hour intermediate course prepares those with some computer experience (as you get with our introductory course described above) to write moderately complex programs. Normal cost: \$99.95, but it's *free* to educators.

Educator's Workshop—This 3 to 4 hour workshop introduces you to microcomputer applications in the classroom, how computers are being used and what courseware is available. Normal cost: \$59.95, but it's *free* to educators.

How Do I Find Out More? Stop by your nearby Radio Shack Computer Center or call your Radio Shack Regional Educational Coordinator. They'll tell you about courses near you that will get you started in classroom computing or computer programming.

For the name of the full-time Educational Coordinator in your area, call Radio Shack's Education Division at 800-433-5682 toll-free. In Texas, call 800-772-8538.

Praxis Makes Perfect

Olivetti Praxis Typewriter Conversions: Are They Worth It?

Printers can be so dull. I dreaded the thought of having to buy a daisywheel machine, but the chore had become inevitable. Midway through my search, I entered a neighborhood computer store, and gazed down one of the carpeted isles.

Printers.

The models sat listlessly, perched atop an imitation wood counter—in an unending line—clones of clones of clones. I had looked at so many that after a time, their images began to blur into one congealed, sticky mess. They all seemed to work the same, look the same, cost the same. That is, all except one—one that I had never seen before. In reality, it wasn't hard to single this new one out from the crowd.

A lamp shone above the printer—the unique one—and cast a warm glow over its classic black exterior. I read the writing emblazoned on its sleek body—Olivetti Praxis 30. “But that’s a typewriter,” I said to the salesperson. “It’s also a printer,” she gaily replied. She smiled, reached behind the printer, and turned it on.

“So it is,” I mused, tracing a thick pale blue cable that emerged from the base of the printer. The cable was at-

Gordon McComb

tached to a small plastic box that rested innocently beside an Osborne portable. Another cable twisted and looped between the RS-232 port of the computer and the box.

I threaded a sheet of letterhead into the printer and rolled the platen until the tip of the paper peeked past the printhead. I told the computer to print and glanced over at the Olivetti.

The daisywheel printhead slid effortlessly to the left margin. The platen advanced a few lines with a strange “shick shick” sound, and the printing began.

It wasn't the speed with which the let-

The Olive-80 and Olivetti Praxis 35 typewriter cum printer: it can be used as both any time.

Gordon McComb, 1225 Palomar Pl., Suite 100, Vista, CA 92083.

Praxis, continued...

ters were printed that impressed me. In fact, the Olivetti typewriter/printer has a top speed of only 12 characters per second. Rather, it was the superb type quality that caught my eye, and the fact that for less than \$800, I could get not only an interchangeable daisywheel letter quality printer, but a full featured electronic typewriter as well. Double duty for half the price! It wasn't hard for me to decide which printer I was going to buy.

But as I was signing my check, I overheard another customer ask how different this Olivetti typewriter/printer was from the other Praxis-based model that was out. "What other model?" I shouted as I stashed the check back in my coat pocket. "You mean there's another one?"

"What other model?" I shouted as I stashed the check back in my coat pocket.

Yes. What I found out was this: Several companies offer converted Olivetti Praxis 30 printers, and at first glance, it would seem that since they all use the same basic typewriter, they too, would be the same. Look again. The two most popular Praxis conversions—the Bytewriter and the Olive-80—are far from being similar. Here's what I found out about both machines.

What's a Praxis?

A description of the Olive (which is available in both typewriter/printer and typewriter conversion kit models) and the Bytewriter wouldn't be complete without first telling you about the Olivetti Praxis 30, the machine upon which both printers are based.

The Praxis is a fully portable typewriter—it even comes with its own rigid plastic carrying case. The real key to the Praxis is that it is electronic; that is, there are no linkages or solenoids or bellcranks activated when you depress one of the keys as there are with an IBM Selectric or standard electric typewriter. The Praxis keyboard is engineered like a computer keyboard; it is just a series of switches.

When one of the keys is depressed, an encoder circuit inside the typewriter notes which key has been struck, and directs the motor driven printhead to type the proper character. A second motor is used on the typewriter to position the printhead along the length of the platen.

The Praxis uses daisywheel elements, so you can switch from one typestyle to another. The wheels aren't compatible with any other printer or typewriter, so you have to buy them specially for the machine. The resin-tipped plastic wheels retail for \$29.95, but there are more than a dozen different styles available (resin-tipped wheels are supposed to last longer than plain plastic ones). The Praxis uses cartridge loaded fabric and film ribbons.

The Praxis has its own 12-character keyboard buffer, and it is extremely difficult to out-run it. You cannot jam keys. It also remembers the last ten characters typed. So if you make a mistake, you can go back to the letter (as long as it is less than ten characters from where you left off), hit the "correct" key, and the character will be automatically lifted off by the correcting ribbon built into the machine.

Although the Praxis doesn't print all 96 characters normally found on a standard daisywheel printer, it is capable of

producing some special purpose characters such as ^, N, £, and ó. Separate keys don't exist for these characters; a switch on the typewriter labelled KB I/KB II allows you to toggle between two keyboards, and print the special characters.

Even though the Praxis typewriter doesn't allow you to alter the printing pitch (from 12 characters per inch to 10, for example), it is internally capable of multi-pitch operation. Both the Olive and Bytewriter take advantage of this fact and add control over pitch, allowing you to use 10, 12, and 15 characters per inch wheels. (Another Olivetti model, the Praxis 35, is also available—the only real difference between the 30 and 35 is that the latter has an external switch that offers the typist pitch control. Olivetti gets about \$100 more for the 35 for what amounts to a 90¢ switch; it hardly seems worth it.)

Other features of the Praxis include single, space and a half, and double spacing, electronic tab and margins (no

OPEN YOUR APPLE TO A WORLD OF COMMUNICATION

Videx' new PSIO Dual Function Interface Card gives you a whole new world of communication... with a whole new ease of operation.

The PSIO allows you to use a printer (parallel output) and a modem (serial I/O port) simultaneously, through use of just one card! But best of all, the PSIO makes communicating through either method worlds easier than it's ever been before.

The PSIO lets you choose from among an unmatched range of software-selectable options, including variable baud rate selection, form width, form length, auto linefeed, linefeed mask, Xon/Xoff protocol, lowercase masking, shift wire mod support, duplex mode, parity, data format, video echo mode and a slot echo mode.

PSIO can also open up new worlds for graphics, since it can reproduce your picture on any graphics printer. Rotate your picture, enlarge it, change it as you wish.

Once you've chosen your options, the PSIO's highly sophisticated NOVRAM (non-volatile RAM) will remember and permanently save them. That means you won't have to give the same configurations over and over again... your PSIO will do it for you. And if you want to *change* those configurations, you can do it through software instead of through the confusing array of switches that other cards use.

The PSIO will work with any printer/modem you now happen to own... and it will work with any printer/modem you happen to purchase in the future. Adaptable? Definitely!

The PSIO is completely compatible with BASIC, Pascal and CP/M® systems.

The PSIO from Videx... how in the world can you do without it?!

WORD PROCESSING HAS NEVER BEEN SIMPLER

Brøderbund's Bank Street Writer turns your Apple or Atari computer into a powerful word processor, with many of the advanced features you'd expect to find only in an expensive business system. Powerful, yet purposefully simple, Bank Street Writer has no complex codes to memorize. The screen guides you every step of the way. It's everything you're ever likely to need in a word proces-

sor at a price you can afford. Here are just a few of its many features:

- Add, move, insert and erase blocks of text,
- Universal search and replace,
- Automatic centering and indent,
- Automatic word wrap, so you don't have to hyphenate or "return" at the end of each line,
- Potent print format routines all in memory,
- Disk storage and retrieve

functions with password protection, • Document chaining allows you to print documents of unlimited length, • Page headers and automatic page numbering—top or bottom, • Highlighting of text, • Upper and lowercase without additional hardware.

Brøderbund's Bank Street Writer comes complete with Tutorial and Utility programs, a comprehensive reference man-

Bank Street WRITER™

ual and a free back-up disk.

Student approved, the entire system has been extensively tested by Bank Street

College of Education and Intentional Educations.

Bank Street Writer. The ground-breaking, sensible combination of word processing power, thoughtful design, and exceptional value.

The First Word Processor For The Entire Family.

Hardware requirements: Apple version requires Apple II or Apple II + with 48K and Applesoft in ROM of language card, DOS

3.3. Atari 400/800 version requires 48K and BASIC cartridge. Both versions require only one disk drive.

 **Brøderbund Software**

Praxis, continued...

mechanical stops here), warning buzzer, and a "relocate" key that automatically returns the head to the last print position—a time saver when you stop typing and go back to correct a letter or word at the other end of the line.

The Printers: A Close Look

So much for the typewriter itself. What about the printers? There are three primary differences:

Perhaps the biggest difference between the two printers is that the Bytewriter is a parallel machine and the Olive is a serial machine. The two are not available in different versions. This can limit your choices depending on what port your computer has.

My Osborne, for instance, has both a serial and a parallel port. Both are un-

The top print speed for both the Bytewriter and the Olive is 12 characters per second.

used, so my choice of printer isn't restricted. You, on the other hand, may have only one or the other port. If you have, say, an Apple, you might already have a serial card for a modem or a dot matrix printer. Unless you want to spend another \$100 for a parallel card, you will probably opt for the Olive. Even if you have both ports, your choice may be limited if one is used exclusively for a particular peripheral. In any case, this is up to you to decide.

Electronics

Another primary difference is that the electronics for the Olive are all outboard: everything is packed in a small plastic interface box. A ribbon cable joins the box to the keyboard output terminals inside the typewriter. You can disconnect the interface box from all its cables if you ever need to transport the printer, but you will have one more thing to carry, of course. By the way, the separate interface box is normally powered by a separate power supply like the one on your calculator that plugs into the wall. The supply costs \$9.95 extra.

The electronics for the Bytewriter are all internal. A small connector located on the righthand side of the Praxis allows you to snap on a specially made cable (about \$35 from Bytewriter) from the printer to your computer. You can make the cable yourself, too—the instructions that come with the Bytewriter tell you which pins do what.

Since everything is inside the machine, there is nothing else for you to carry if you are one to tote your computer system around with you. The Bytewriter electronics use juice from the Praxis power supply.

Printing Functions

The third major difference is that several of the Olive printing functions are software controlled, whereas the Bytewriter uses small DIP switches to control its functions.

Some cases in point: To alter the pitch selection on the Bytewriter, you depress one of three switches, all of which are located on the exposed side of the built-in electronics. A pencil makes the job easier because the fit where the electronics are mounted is tight.

The keyboard toggle (KB I/KB II) must be controlled manually with the Bytewriter. For example, to create a £, it is necessary to type a shifted 2 (@ on my Osborne) on the computer. When printed out, the keyboard switch must be momentarily placed on KB II. To prevent other, unwanted special characters from being printed, it is necessary to quickly switch back to KB I.

The Olive makes this a little easier. After you have patched the program, you simply leave the switch in KB II and use a software toggle. In *WordStar* it is control-PR. Hitting control-PR again cancels the command. The Olive also allows for manual pitch selection, but you must build a jumper switch to do it.

Margins

Lastly, when the Praxis is first turned on, the margins are set at 30 and 90 (for 10 pitch operation). You can change

these margins if you wish, although your changes will be erased when you turn the machine off. Whether you use the default settings or your own, the Bytewriter prints within these margins. If your right margin is set at 90, you cannot print beyond that. If you attempt to print past the right margin, the Praxis will beep at you, and you will lose the rest of the characters in that line. The lesson here: When you use the Bytewriter, it is important that you move the right margin all the way over when using computer input to avoid this loss of text.

This isn't a problem with the Olive, because it resets the margins to 0 and 110 (far left and far right) immediately before it prints (your word processing program handles the margins). At the end of the printing session, the Olive restores the Praxis to its default margins of 30 to 90.

Speed

The top print speed for both the Bytewriter and the Olive is 12 characters per second (cps), which is the same as Smith-Corona's TP-1 printer, and just slightly slower than Brother's HR-1 printer. Isn't 12 cps slow? It can be if you are in a hurry. I have found that it takes about 2 to 2½ minutes to print out a letter or a double-spaced manuscript page (that includes the time it takes for the printhead to return after each line—the Bytewriter and Olive are both uni-directional only). While the machine is doing its thing, I'm off raiding the refrigerator, checking the mail, making phone calls.

While it is possible to live with the 12 cps speed (once you get used to it), you

The Olive-80 allows for user-selectable options (explained in text). Plastic covered jumpers are used in the changes.

For everyone who's tried
to top the MX-80, bad news.
We just did.

Epson.

The Epson MX-80 is the best-selling dot matrix impact printer in the world. It has been since its introduction. And despite the host of imitators it spawned, no one has been able to top it. Until now.

FX-80: Son of a legend.

The new Epson FX-80 is far more than just doo-dads added on to last year's model. It's the most astonishing collection of features ever assembled in a personal printer.

For starters, it's fast: 160 CPS. And clean. All the print quality Epson is famous for in a tack-sharp 9x9 matrix.

But that hardly scratches the surface.

Create your own alphabet.

With the new FX-80, you aren't limited to ASCII characters. You can create your own. Any character or symbol that can be defined in a 9x11 matrix can be added to the FX-80's already impressive library of type styles and stored in its integral 2K RAM.

So you can create "Sally's Gothic" or "Tom's Roman" just by downloading and modifying standard characters. Or you can create a custom set from scratch. Either way, you can store up to 256 new characters. And if you don't need a new alphabet, the RAM functions as a 2K data input buffer.

Who knows graphics better than Epson?

Nobody, that's who. And if you don't believe it, witness the FX-80.

With a 12K ROM capacity, the FX-80 gives you a few things the others don't. For example, not one, not two, but *seven* different dot addressable graphic modes are program

selectable. And can be mixed in the same print line. Everything from 72 DPI (dots-per-inch) Plotter Graphics to the 640 dots per line resolution designed to match the remarkable monitor clarity of the Epson QX-10 personal computer.

And *that* is in addition to an astonishing array of 136 different user-selectable type styles including Proportional, Elite and Italic as well as the more conventional faces you get on other printers.

Hard-to-beat hardware.

The FX-80 has all the hardware features you've come to know and love on the MX Series: logic seeking, bidirectional printing, the by-now-famous disposable printhead, and more.

The FX-80 features an adjustable pin platen or optional friction/tractor feed, so you can use fanfold, roll or sheet paper ... backwards or forwards. The FX-80 even gives you reverse paper feed.

And if you're printing forms, the FX-80 has a feature you're gonna love: a function that allows you to tear off the paper within one inch of the last print position.

Be the first on your block.

We'd be willing to bet that the FX-80 — like the MX-80 — will have its share of imitators. Don't be fooled. To make sure you get the genuine article, rush down to your local computer store right now and let them show you everything the FX-80 can do.

And while you're there ... ask them to show you how it works with our computers.

THE WALL STREET PLOTTER

For use with Apple Computer Systems

This program can help you make money, and it's so easy. Two separate price move indicators may be displayed with the standard high-low-close financial plot, the popular moving average, or a trend analysis of the trading cycle. The trend analysis overlays the trading cycle onto buy and sell zones resulting in a practical, easy to use price move indicator. Plots may be generated for any financial security, commodity, or market average.

This package is compatible with text files containing historical quotes captured from several of the popular quote services by any of the popular telecommunications packages. The package also includes a powerful line oriented text editor for manual data entries, deletions, or additions. Data Files may be created in whole or in part with the editor.

The package is compatible with all of the popular graphics printer and plotter drivers as well as our other product, The Superplotter.

Requirements: 48K Apple II Plus with DOS 3.3
or Apple III in emulation mode

Price \$125.00

Praxis, continued...

will find that some printing jobs just aren't well suited for a converted Praxis. Even though the Praxis (typewriter) has a tab key, the Praxis (printer) single spaces to each tab stop. This goes for both the Olive and the Bytewriter. (Technically it is capable of a horizontal tab; but your software must initiate the HT command—after you have manually set the tabs—rather than simply a series of spaces, as with WordStar.)

So if you are doing a chart, a complicated outline, or some other document that has many indentations, you will find it takes time not only to print out the characters, but for the head to align itself at the next printing position. A simple chart with twenty items took me over five minutes to print, because the items were on the extreme right-hand side of the paper. After the printhead typed one word, it returned to the left margin, single spaced all the way out to the next word, typed it, and repeated the process.

Because the Praxis is a portable machine, it isn't meant for heavy duty use. If you think of it as a printer, it is easy to forget this and run the machine day and night. Don't do it! You'll end up with a smoking hunk of metal and plastic. Ideally, the Praxis should be used for fewer than 20 pages per day. Anything more could shorten its life considerably.

In Use

The operation of the Bytewriter is fairly straightforward. You simply plug it in to any Centronics-compatible port and you're off and running. The Bytewriter does allow you one custom adjustment. The unit always responds to a line feed (LF) command by returning the printhead (carriage) and advancing one line.

The Bytewriter can be made to respond to a carriage return (CR) command in two ways: it can return the printhead and advance one line, or it can simply return the printhead. Some computers issue both a CR and an LF command at the end of a line, resulting in double-spacing (even when the typewriter is in single-space mode). The Bytewriter allows you to override this by squelching the second linefeed. This one provision also makes it possible to return the printhead to the left margin to create underlined text.

The Olive provides the above feature, along with many more independent options. Most of these options are provided because the Olive uses the serial port, which by its nature, requires peripherals to be somewhat intelligent and fast on their feet.

For example, you can change between 110, 300, and 1200 baud (which, of course, is not necessary for a parallel

MAGICALCTM

+

EXPAND-A-RAMTM

Everything VisiCalc can do and much more. Plus 64K or 128K RAM. Plus 80-column display for Apple IIc at no extra cost.

MAGICALC is a completely new second generation spreadsheet program for Apple II. This state-of-the-art system includes 70-column upper and lower case video, full 80-column board display, hard disk compatibility, individual column widths, invisible columns for confidential data, and full compatibility with VisiCalc that lets you utilize existing VisiCalc models. Refer to the box below for a comparison of MAGICALC and VISICALC.

EXPAND-A-RAM 64K or 128K of additional RAM memory for expanded MAGICALC worksheets. Includes MEMORY MANAGEMENT SYSTEM — relocates DOS for more free memory in BASIC. You also get RAMDISK emulators for APPLE DOS, APPLE PASCALTM, and CP/MTM — a software package that emulates a standard Apple floppy disk drive but is 2 to 10 times faster. Plus more.

Registered trade marks: Apple... belongs to Apple Computer, Inc., Magicalc to Artsci, Inc., Expand-A-Ram to Prometheus Products, Inc., VisiCalc to Visicorp, CP/M to Digital Research, Inc.

EXPAND-A-RAM for Apple II plugs into any slot and works with the many software programs that use 16K of RAM in slot 0 — including CP/M, APPLE PASCALTM, LISA, MERLIN... and many others. **EXPAND-A-RAM/80** for Apple IIc, which includes the 80-column display, goes into the auxiliary slot. No modification of your Apple is required.

SPECIAL LOW INTRODUCTORY PRICES for the combination MAGICALC plus EXPAND-A-RAM are \$399 with 64K RAM and \$499 with 128K RAM. Apple IIc users (only), please specify your choice of the standard EXPAND-A-RAM or EXPAND-A-RAM/80 with 80-column Display at no additional charge.

printer). Handshaking, those signals that tell the Praxis and your computer what the other is doing, can be either software or hardware controlled. Software control uses the standard XON/XOFF protocol found in such printers as the Diablo

The Bytewriter and the Olive are both capable of underlining.

630 (so if you have software that can run with a Diablo serial printer it will probably work with the Olive without modification). When hardware handshaking is used, you can choose any of four RS-232 pins and various pin polarities. You can also power the Olive through the RS-232 cable, assuming of course that your RS-232 port has

compatible engineering. All of this and more are controlled by switching a gang of jumpers inside the Olive control box.

While the Olive provides more flexibility than the Bytewriter, and is perfect for the user with a non-standard system, it can be more difficult to use for those with little or no technical background. Yes, the manufacturer will give you hints and suggestions on how to hook things up, but it is nice to be able to plug something in and have it work. If you are one who likes sheer simplicity, you should look into the Bytewriter.

Self-Test

It is not unusual for printers to have self-test features built in, and the Bytewriter and Olive are no exceptions. The Olive runs through a self-test—prints out two lines of each character—every time it is turned on or reset. This, admittedly, can be tiresome, so the Olive allows you to defeat this self-test.

The Bytewriter is a little different. It

Its inevitable!

\$129⁵⁰

It's inevitable. Sooner or later you will realize that a desk or a standard table has not been designed for your micro-computer. From an ergonomic aspect, you are actually punishing yourself. At M.F.S. we specialize in **computer tables** and our Model II expresses our concept of dedicated design at an affordable price. In a neutral almond colour Melamine, the Model II will blend equally well into a home or office environment. It's flexible enough to accommodate most micro-computers or printers in your home or office. And should you change **your** hardware our hardware permits re-configuration to any of the above versions in a matter of minutes. At **129.50** it's not an expense, it's an investment.

Dimension (o.a.): 33 3/4" W x 27 1/4" D x 32" H.
Surfaces: Melamine, thermalfused to 1" substrate.
Shipping: 2 cartons, total 92 lbs. (Unassembled, requires screwdriver only).

Praxis, continued...

won't crank out a test each time it is turned on. You must hook up a jumper cable to evoke the self-test feature. The bad part? You must make the cable yourself.

The Bytewriter and the Olive are both capable of underlining. Both machines accomplish this by either backspacing, or returning the printhead and going back to the word to be underlined. With the Praxis, both ways seem to take about the same amount of time. The Olive is also capable of printing in bold face. Again, it performs this by either backspacing on each letter or doing a complete carriage return.

Ease of Use

Both the Bytewriter and Olive are easy to use, although there are some small complaints that should be covered.

* Conversion kit model \$249, works with Praxis 30 or 35.

** Also capable of powering through properly configured RS-232 cable.

The Olive has a small reset key that is recessed into the front panel of the interface box. The hole is too small and the switch is set too far inside. Your pinky will probably be small enough to press it, but it doesn't provide a very positive feel.

The interface for the Olive comes out the front of the Praxis, then tucks underneath the machine and exits at the rear, where it continues on until it attaches to the interface box. And then of course, you have the cable between the computer and the box as well. What I found is that it is not hard to end up with a mess of cable on your desk. Although the Bytewriter doesn't have the extra length of cabling or an external box, the interface connector is located on the side of the machine, rather than the rear. Again, you can easily get lost in a thicket of cable.

If you buy a Bytewriter, you should know that Olivetti will still honor the original warranty, just as long as the fault lies within the typewriter. You can ship the machine back to Olivetti or take it to any one of dozens of regional authorized dealer repair depots. Bytewriter covers their portion of the contraption with a 90-day guarantee.

At this writing, the same doesn't go for the Olive, however. If you buy a factory-converted Praxis, your only recourse for an in-warranty repair is to send it back to The Olive Branch (located in Hayward, CA). If you convert a Praxis yourself while it is still under warranty, you void that warranty, of course. This all can change, so contact Olive for the latest details before you make your decision.

A final word about instruction manuals. The Bytewriter, being fairly simple in set-up and operation, doesn't have much in the way of a manual—about seven or eight pages worth of text. There is no technical information provided other than the pin-out assignments for the connector.

The Olive, on the other hand, is replete with information—setup, use, and technical. It comes with charts and graphs showing character sets, specifications, a sample self-test program (in Basic), and more. If you already have a Praxis 30 or 35, you can buy just the interface board from Olive and do the conversion yourself (which requires that you solder a pair of ribbon cables inside the machine). The instructions are easy to follow.

For more information on the Bytewriter, contact Bytewriter, 125 Northview Rd., Ithaca, NY 14850, (607) 272-1132; for the Olive-80, write The Olive Branch Association, Ltd., 26291 Production Ave., Suite 205, Hayward, CA, 94545 (415) 887-5633. □

Olivetti Praxis Conversion

The Praxis is not without its mechanical shortcomings, which can hinder proper operation in both typewriter and printer modes. One of the biggest problems is that small flakes of ink from film ribbons can clog up the sensor strip. The sensor tells the daisywheel motor where to stop to print a character. When the sensor strip is clogged, the Praxis prints out documents in some strange and totally unrecognizable tongue. The solution: spray contact cleaner on the sensor strip every few months to ensure proper operation.

Another problem involves the linefeed mechanism of the typewriter. It can get out of whack, causing uneven line spacing. You can correct the fault yourself; the instructions that come with the Bytewriter even tell you how to do it.

And third, the printing quality can sometimes be degraded when you reach the tail end of a film ribbon, or when the daisywheel mechanism is slightly misadjusted (both have happened to me). The net effect is broken characters, particularly at the bottom. If either happens much, you should contact an Olivetti dealer for repair.

HOW TO BEAT ANY VIDEO GAME SINGLE-HANDED.

WITH THE QUICK-SHOT™ JOYSTICK CONTROLLER

MODEL 318-101

Beating any video game is easy, but beating it single handed takes a lot more. It takes a good joystick that is responsive and comfortable. Now with Spectravision's new Quick-Shot™ Joystick Controller, you can do it all single-handed; control and fire at the same time.

One look at the handle and you know you'll have a better grip on your game. It's contour design fits comfortably around your palm. You can play for hours without developing a case of sore thumb. The firepower button on top of the handle gives you that extra margin of

THE WINNING EDGE.

speed. (We didn't call it Quick-Shot for nothing.) You also have the option to use the left hand fire button simultaneously. The four removable suction cups hold the

entire joystick firmly on any surface. It also comes with a long cord.

With all those superior features in one joystick, you know you got yourself a winning combination. And when it comes to beating video games, one hand is all you need!

Get the Quick-Shot™ now, you'll be that much ahead. After all, winning is what every game is all about.

A Printing Slave Ready to Serve

Have you ever considered how much time you waste waiting on your printer to catch up with your computer? Ever wonder what it would be like to print one thing while working on another? Ever face the problem of switching between a serial printer and a parallel one? Ever been disturbed by program listings printed right over the fold in your paper, running past the right margin, or formatted so that they are difficult to read? Ever wished you could get printouts with header lines and page numbers without preprocessing a text file through a word processor?

The buffering and print formatting features alone are invaluable.

All these things, and more, are possible. Commonly called "printing spoolers" or "buffered interfaces," devices do exist to aid you with varying combinations of those problems. The available equipment ranges from plug-in interface cards with their own dedicated memories, through "dumb" spoolers that do nothing more than capture data from a computer and retransmit to the printer, to truly "intelligent" printer interfaces.

Compulink Corporation's SooperSpooler, Model SS-1000, fits into that last category—an intelligent, multi-function interface. A self-contained desktop unit, SooperSpooler is a functional 2

Ernest E. Mau

MHz Z80 based "slave" computer installed in the communication line between the "master" computer and the printer. There it acts as a postprocessor for the data being printed. Notice that I have called it a postprocessor and not merely a buffer. A buffer would serve to capture data from the computer at its given transmission rate, store the data panded to 62K (\$159), and two RS-232C serial ports (\$95) can be added either at the factory or as user-installed modifications. The unit I tested is the

full 62K configuration with two parallel and two serial ports.

The unit can be controlled by switches, software, or both. Using just the switches, it provides a full or "hard" system reset to clear any stored data and temporarily, and then retransmit to the printer at a rate acceptable to that device. SooperSpooler does that, but as just one of its functions.

The standard SooperSpooler configuration is equipped with 16K of RAM and two Centronics-compatible 36-pin interface ports, one for input from a computer and the other for output to a printer. It retails for \$349. As separate options, the memory can be ex-

Ernest E. Mau, 3108 South Granby Way, Aurora, CO 80014.

SooperSpooler, continued...

control parameters, a "soft" reset to clear just the data buffer without affecting control parameters, a complete self test of RAM and the control ROM, and several general print formatting functions.

Using just two front panel switches singly or in combination, the unit can be set for automatic space compression, automatic pagination, single sheet paper feeding, or combinations thereof.

Under software control from the master computer, all these functions plus several others accessible without using the switches are available. By transmitting the proper instructions from the master computer, it is possible to have SooperSpooler print specific headers at the top of each page, number the pages sequentially, format the page, format individual lines, and override hardware switch settings controlling interface or printer characteristics.

Under software, the page format controls affect the overall page length, the number of printed lines per page (top and bottom margins), and the position of the right printing margin with respect to the page edge. The line format controls affect both left and right printing margins and allow a selectable indent to be set for data lines that overflow from one printed line to the next. Using these controls, Basic program listings, unformatted text files, and other printouts can be printed for maximum readability.

Interfacing

The buffering and print formatting features alone are invaluable for serious computer use involving large amounts of printing. But SooperSpooler offers even more advantages in the hardware interfaces themselves. The ideal configuration is, of course, the 62K version equipped with both the dual parallel and dual serial ports. The presence of both parallel and serial communication is important when there are multiple computers or multiple printers that can be mixed and matched.

To illustrate, serial input and output can be performed at different transmission speeds because the rates are independently switch selectable. Therefore, SooperSpooler can function as a baud rate changer. Consider the case of a typical daisywheel printer having a maximum input rate of 1200 baud, which is somewhat slow when the computer might be capable of transmitting at 9600 or even 19,200 baud. With proper switch selection, SooperSpooler can accept incoming data from the computer at up to 19,200 baud and retransmit at 1200 baud while not "overrunning" the capabilities of the printer.

Furthermore, SooperSpooler can receive and retransmit data through vari-

ous port combinations. Data from the computer can be received through either the serial or parallel input port and can be transmitted through either the serial or parallel output port. This means a computer with a parallel interface can output to a serial printer, or a printer with a serial interface can output to a parallel printer. It also means that one computer can drive either of two printers, either of two computers can drive one printer, or either of two computers can drive either of two printers. The only limitation is that serial and parallel printers cannot be operated simultaneously—the output port is switch selected on the SooperSpooler, but either input port is recognized without switch settings.

***SooperSpooler
normally cannot be
used as a universal
interface between two
otherwise incompatible
devices.***

Flaws

So far, so good. I have shown that SooperSpooler has some interesting, useful, and even delightful capabilities. You are probably getting the feeling that I have developed a particular fondness for this device, and you are right. But, like any device, it has its flaws—flaws that may be more serious for some users than for others but ones that are worthy of mention.

The most annoying of all, is the location of the selection switch to change between parallel and serial printer output. It is on a dip or "pencil" switch array accessible through an opening in the rear panel of the device. This means that the unit usually must be moved and a small hooked tool such as a bent paper clip inserted into the access opening to reselect the output port (while power is off). For single computer/single printer installations this isn't a problem because there is no need for port selection after the initial installation. However, it is inconvenient when using two printers with the SooperSpooler as the switching device. There is also a risk of dislodging a cable connector in the process of moving the unit. It would have been better had Compulink designed the unit with a front switch for the port selection and "protected" that switch so the change-over could be made without turning the unit off.

There is no provision for switching the spooler off-line to make it transparent to the communication line. Certain applications such as word processing often are performed best without spooling, especially if there is any expectation of interruption. With the spooler in place, all data are buffered so the "interrupt/resume printing" functions incorporated into many programs become inoperative. By the time an interrupt is generated from the keyboard, the spooler has stored data far beyond that point, so the material continues to print.

Of course, any or all "intelligent" postprocessing features including space compression, page formatting, and line formatting, can be turned off. But this cannot be done while a printing run is in progress.

Compulink has taken steps to prevent the misconnection of devices at the ports. On the parallel side, the computer and printer connectors are rotated 180° from each other. On the serial side, however, the printer port is a male connector (plug) while the computer port is a female connector (socket). Often, printers with built-in interface cables have a male connector on the computer end, which won't mate with the male connector on the SooperSpooler without installing a separate adapter or "gender changer." Similarly, most computers are equipped with female interface connectors, requiring either a female-to-female cable from the SooperSpooler to the computer instead of the more usual male-to-female cable or another gender changer. Compulink has advised me that they will swap connectors if a unit is ordered for a particular setup such as two male serial connectors, two female connectors, or the male and female connectors reversed from the "normal" configuration.

As has been pointed out, the baud rates on the serial input and output ports are independently selectable so data may be received at one rate and transmitted at another. However, the other interface characteristics are not independent; what is selected for one port also is selected for the other. These parameters include choosing RS-232C handshaking signals vs. software protocol, seven- or eight-bit character lengths, one or two stop bits, parity type, and parity enabling.

Therefore, SooperSpooler normally cannot be used as a universal interface between two otherwise incompatible devices. If a printer won't work with a computer because of a difference in character length or protocol, SooperSpooler won't solve the problem. On the other hand, Compulink has advised me that they can equip units with special control ROMs for features such as differing protocols at the two ports offer-

Hayes

Your computer's telephone.

Phil: Just got the word from Gary. Increased our share by 6%. If trend holds, we'll pass competition by third quarter!

To all reps: Price changes on following items effective immediately:
No. 10-111A, 10-114A, 10-AL.

Welcome to TELEMAIL! Your last access was Tuesday, May 3, 1983 11:07 a.m. CHECK these bulletin boards: TELEMAIL...TELESOFT...

A personal computer without communications, is like a car without gasoline. It can't go anywhere.

It needs a special telephone (called a modem), to get you communicating with other computers. Across the city. Or the entire country.

Whether you're swapping programs with friends or club members. Working at home and sending reports to the office. Or taking advantage of a wealth of information from any of the networks or information utilities. Telecomputing greatly expands the world of your personal computer.

And Hayes provides the communications link. Smartmodem 300, and the faster Smartmodem 1200, work with any computer with an RS-232C I/O port. Plugging your computer directly into the phone

system, they allow you to communicate over ordinary phone lines with computers and terminals anywhere in America.

But any modem will send and receive data.

A Hayes Smartmodem also dials, answers and disconnects calls. Automatically. And it does this without going through the telephone receiver, a design feature that makes it far superior to acoustic coupler modems.

Choose your speed, choose your price. Hayes Smartmodems are available at two different speeds and price levels. The lower-priced Smartmodem 300 is ideal for local data swaps and communicates at 300 bps.

For longer distances and larger volumes, Smartmodem 1200 operates at 1200 bps or up to 300 bps, with a built-in selector that automatically detects transmission speeds.

Both modems work with rotary dials, Touch-Tone* and key-set systems. We've even included an audio speaker and indicator lights so you can monitor the communica-

tions process. Smartmodem 1200 has an additional indicator light that detects high-speed transmission. And, unlike many modems, both Smartmodems operate at full or half duplex, for compatibility with most time-sharing systems.

At Hayes, all of these "extras" are standard. We've built our reputation on superior quality. Excellent documentation. A limited two-year warranty. And a wide range of software support. Including our own hot-selling Smartcom II™ communications software for the IBM** PC, making Smartmodem 300 and 1200 even easier for you to use.

See your computer dealer today for a demonstration.

Then break out of isolation. Get a Hayes telephone for your computer.

Inside Apple

Apple Computer Inc., 20525 Mariani Avenue, Cupertino, California 95014

Vol. 1 No. 2

For the authorized Apple dealer nearest you, call 800-538-9696 (800-662-9238 in California.)

Fruitful Connections.

There are more people in more places making more accessories and peripherals for Apples than for any other personal computer in the world.

Thanks to those people — in hundreds of independent companies — you can make the humblest 1978 Apple II turn tricks that are still on IBM's Wish List for 1984.

But now we're coming out with our very own line of peripherals and accessories for Apple® Personal Computers.

For two very good reasons.

First, compatibility. We've created a totally kluge-free family of products designed to take full advantage of all the advantages built into every Apple.

Second, service and support.

Now the same kindly dealer who keeps your Apple PC in the pink can do the same competent job for your Apple hard-disk and your Apple daisywheel printer.

So if you're looking to expand the capabilities of your Apple II or III, remember:

Now you can add Apples to Apples.

A joy to behold.

The new Apple Joystick II is the ultimate hand control device for the Apple II.

Why is it such a joy to use?

With two firing buttons, it's the first ambidextrous joystick — just as comfortable for lefties as righties.

Of course, it gives you 360° cursor control (not just 8-way like some game-oriented devices) and full X/Y coordinate control.

And the Joystick II contains high-quality components and switches tested to over 1,000,000 life cycles.

Which makes it a thing of beauty. And a joystick forever.

Gutenberg would be proud.

Old Faithful Silentype® has now been joined by New Faithfuls, the Apple Dot Matrix Printer and the Apple Letter Quality Printer.

So now, whatever your budget and your needs, you can hook your Apple to a printer that's specifically designed to take advantage of all the features built into your Apple. With no compromises.

The 7x9 Apple Dot Matrix Printer is redefining "correspondence quality" with exceptional legibility. With 144x160 dots per square inch, it can also create high resolution graphics.

The Apple Letter Quality Printer, which gets the words out about 33% faster than other daisywheel printers in its price range, also offers graphics capabilities. See your authorized Apple dealer for more information and demonstrations. Because, unfortunately, all the news fit to print simply doesn't fit.

Up the creek without a paddle?

Or lost in space? Or down in the dungeons?

Whatever your games, you'll be happy to know that someone has finally come out with game paddles built to hold up under blistering fire. Without giving you blisters.

Apple Hand Controller II game paddles were designed with one recent discovery in mind:

People playing games get excited and can squeeze very, very hard.

So we made the cases extra rugged. We used switches tested to 3,000,000 life cycles. We shaped them for holding hands and placed the firing button on the right rear side for maximum comfort.

So you'll never miss a shot.

A storehouse of knowledge.

If you work with so much data or so many programs that you find yourself shuffling diskettes constantly, you should take a look at Apple's ProFile™, the personal mass storage system for the Apple III Personal Computer.

This Winchester-based 5-megabyte hard disk can handle as much data as 35 floppies. Even more important for some, it can access that data about 10-times faster than a standard floppy drive.

So now your Apple III can handle jobs once reserved for computers costing thousands more.

As for quality

and reliability, you need only store one word of wisdom:
Apple.

Launching pad for numeric data.

Good tidings for crunchers of numerous numbers:

Apple now offers a numeric keypad that's electronically and aesthetically compatible with the Apple II Personal Computer. So you can enter numeric data faster than ever before.

The Apple Numeric Key-pad II has a standard calculator-style layout. Appropriate,

because unlike some other key-pads, it can actually function as a calculator.

The four function keys to the left of the numeric pad should be of special interest to people who use VisiCalc®. Because they let you zip around your work sheet more easily than ever, adding and deleting entries.

With one hand tied behind your back.

Plug 3,000 new applications into your Apple.®

THE CP/M Card™ plugs CP/M Plus™ into your Apple. The CP/M Card gives you the option of running your Apple II with the speed and capability of a professional Z-80 system with CP/M®-compatible software. You plug in the CP/M Card. Then choose CP/M or your standard Apple software at your option.

Plug into a big, new world of software. The CP/M Card gives you instant access to the world's largest selection of microcomputer software—more than 3,000 CP/M-compatible applications, languages, and programming utilities. So, you, too can use professional business programs such as WordStar®, SuperCalc™, Condor™, and other high-performance software from Day One. Yet, you still have access to your present library of Apple software.

Plug into incredible performance. Together, the ultra-fast CP/M Card and CP/M Plus run applications up to

300% faster than your Apple system! The CP/M Card is the only Apple II performance package that offers the speed and efficiency of CP/M Plus.

A plug about quality.

The CP/M Card was designed and built by Digital Research, the creators of CP/M, and Advanced Logic Systems, the most respected manufacturer of Apple performance products. So you know the CP/M Card is the most perfectly integrated Apple performance package you can buy.

Why just keep plugging along? The CP/M Card provides everything you need—including 64K of on-board memory, CP/M Plus, CBASIC®, GSX™-80 and full documentation—for just \$399.

Now available through the CP/M library. See your local microcomputer dealer today. Or contact Advanced Logic Systems, 1195 East Arques Ave., Sunnyvale, CA 94086 (800) 538-8177. (In California (408) 730-0306.)

Advanced Logic Systems
The CP/M Card for your Apple II.

Also available for the Apple IIe.

SooperSpooler, continued...

ing this "customization" service as a product-support feature for a nominal fee.

Similarly, the serial interface doesn't account for possible variations in RS-232C signal lines such as a "2-3 crossover" needed when data transmitting and receiving lines are defined differently in the printer and master computer, jumpering particular handshaking lines, etc.

The parallel ports supposedly are "plug in and go" with optional cables available from Compulink to account for differences between various printers having Centronics-like 36-pin connectors. Yet some caution is necessary even here. There is at least one computer interface that simply won't communicate with the SooperSpooler, specifically the Interactive Structures Pkaso board for the Apple II and Epson MX-80 printer.

In general, some care must be exercised in attempting to insert a SooperSpooler between a printer and a computer interface designed specifically for that printer. Since the unit has no provision for changing any parallel port signals via switch control, it would be a good idea to verify compatibility with both Compulink and the interface manufacturer before purchasing the units.

My final observation doesn't pertain

to a flaw, but an operational quirk that causes some concern when first encountered. I have noticed it only when inputting to the SooperSpooler through the serial port, and then it is most prevalent at 1200 baud. As data are transmitted from the computer, the printer activates immediately and progresses at

SooperSpooler is an excellent choice for a useful and usable postprocessor and printing buffer.

maximum speed. Simultaneously, the digital display on the SooperSpooler starts indicating kilobytes of data in the buffer. A few seconds later, the printer begins to hesitate, reducing its printout to a half dozen or so characters per second, then resumes full speed, hesitates again, and so on. This continues until the digital indicator reaches about 5K to 7K of buffer storage, at which point the printer takes off again.

Apparently, data coming in from the computer take priority over data going

out to the printer when only a small portion of the buffer is loaded. Therefore, printer output is halted intermittently while data from the computer are being buffered. Once the buffer is filled with several thousand bytes, the situation seems to reverse, with data going out to the printer taking priority over that coming in from the computer.

Summary

Despite these few problem areas, SooperSpooler is an excellent choice for a useful and usable postprocessor and printing buffer. It performs as advertised and as represented in the documentation. Most data transmissions are not performed to the qualifying specs, so it is not realistic to expect the transfer of 20 pages of text to be reduced from 21 minutes to 16 seconds as shown in the brochure.

The 49-page instruction manual is excellent. Written in clear, understandable language, it fully documents all the features and methods for using them. It even provides comprehensive samples of software control routines and is thoroughly indexed for quick references.

Paddle-Adapple

I/O EXPANSION ADAPTOR FOR APPLE][& / e

- Works with all Apple compatible joysticks and paddles • Unique "Jumpers" socket allows you to configure to meet your needs • Select one of two devices or use 4 paddles simultaneously • Gives you four pushbutton inputs • Supports shift key modification • Exchange X & Y joystick axis • Small & compact—adheres to computer with supplied foam tape • All strobes, annunciators and power available on both connectors. **\$29.95**

Paddle-Adapple 'D'

Same as the PADDLE-ADAPPLE that we all know and love, except it has two subminiature 'D' connectors. These are used on the new paddles and joysticks for use with the APPLE / e. It also permits the new style paddles and joysticks to be used with the APPLE][and][+.

Paddle-Adapple Combo

Again, the same PADDLE-ADAPPLE except it has one 16 pin socket, and one subminiature 'D' socket. **\$29.95**

The Power Case System

One of the major disadvantages of the Apple II computer is its inability to display the lowercase alphabetic characters. Recently I had the opportunity to evaluate the Power Case System manufactured by Beaman Porter, Inc. It was a pleasant surprise to discover a product which fulfilled all my expectations and yet was eminently affordable. In use, the Power Case System is completely transparent to the programmer and en-

The Power Case System is completely transparent to the programmer.

abled my department to adopt the Apple, as intelligent terminals for use with text editors available on our mainframe.

About Lowercase

Before discussing the Power Case System let us review the method by which characters are represented in the Apple and ultimately displayed on the monitor.

Yedidyah Langsam, Department of Computer and Information Science, Brooklyn College of C.U.N.Y., Brooklyn, NY 11210.

Yedidyah Langsam

All of the characters found on the Apple keyboard are represented internally in ASCII codes 0-127. Examination of Table 1 on page 15 of the Apple II Reference Manual reveals that these codes correspond to the upper- and lowercase alphabet, the digits from 0-9, and various punctuation marks as well as various control characters and special symbols.

When these codes are sent to the monitor for display, they are first examined by a special ROM at location A4-A5 on the main board. This ROM decodes the incoming signals and sends on the proper character to be displayed to the monitor. Unfortunately, this ROM recognizes only a limited number of ASCII codes and converts those codes which it cannot display into other displayable characters. This can easily be seen by running the program in Listing 1.

It is immediately apparent that the ROM decoder does not recognize the lowercase alphabetic ASCII codes and substitutes the uppercase letters in their place.

One other major deficiency of the Apple lies with its keyboard. The SHIFT key as it is found on the Apple has no effect on the case of the letter transmitted to the CPU.

To correct the inability of the ROM chip to display all the characters represented by the ASCII code one would only have to substitute a different ROM chip in its place. The second problem, that is the inability of the keyboard to transmit the lowercase codes, is slightly more difficult.

For example, suppose you depress only the A key without shifting. We would expect that the ASCII code 97 representing a lowercase *a* would be sent to the chip. Unfortunately, the Apple keyboard sends an ASCII 65 representing an uppercase *A*. One way to solve

Power Case, continued...

this problem is to write a software routine that examines incoming codes from the keyboard and transforms them to their lowercase counterparts unless a SHIFT key is depressed.

Unfortunately, and this is the catch, the SHIFT key on the Apple does not possess a code of its own, so our routine has no way of detecting whether or not the SHIFT key has been depressed.

This problem can be solved by attaching a wire from the shift key to the game socket and having our software examine the game socket for a signal. If a signal is detected at the game socket our routine lets the uppercase ASCII code through without converting it to lowercase.

This is exactly what is done by the Power Case System. Power Case is an upper/lowercase system for the Apple II revision level 7 or greater (1980 and later). It is easily installed and produces one of the clearest and crispest character sets available. The Power Case System comes with a replacement ROM chip to generate the new character set and a micro-hook jumper to connect the SHIFT key to the game socket without any soldering or other permanent changes to the Apple. In addition to the clear and easy to follow manual, the Power Case System includes, on a double sided 16-sector disk, the software routines to effect the upper/lowercase SHIFT key modification written for both Applesoft under DOS 3.3 and UCSD Pascal.

The instructions were so easy to follow, I made the modification in under 15 minutes. The installation procedure is outlined in 12 easy steps accompanied by photographs. The entire procedure is

reversible so that the Apple can be returned to its original condition without voiding the warranty.

Using the System

Using the Power Case System is equally simple. An ESC ESC sequence provides the alpha shift lock. A flashing cursor indicates uppercase. The Power Case System also provides the user with many non-alphabetical characters which were previously unavailable. For example, typing ESC produces a backslash; other ESC sequences provide for {, }, [,], and many others.

The only thing that takes some getting used to is that the cursor moves previously obtained by an ESC I, J, K or M sequence are replaced by the sequence ESC CTRL-W CTRL-A, CTRL-S or CTRL-Z respectively. Another aspect that might at first be confusing is that Applesoft, Integer, and DOS don't understand lowercase. If you type list the computer will respond with syntax error. All you have to do is place the keyboard into caps-lock and the computer will respond to LIST as before.

In addition to the basic UCLC.D routine provided on the disk you will also find programs called KEYPRINT and UCLC.P. The former is simply a program to display the ASCII code name (cr, lf, null, etc.) or decimal value of any key pressed.

UCLC.P is a routine very similar to UCLC.D except that the key sequence used to provide the various additional functions provided by the Power Case System are the same as those used to provide the corresponding functions

while using Pascal. Thus a programmer who works with both Pascal and Basic will not be confused by two different key sequences.

To use the Power Case System from Pascal, a routine for updating the SYSTEM.APPLE file on the APPLE1 disk, is provided on the reverse side of the Power Case disk. Clear and easy to follow instructions for updating SYSTEM.APPLE using either a one- or two-drive system are given in the

The Power Case System works very well under CP/M.

instruction manual. Once the update has been performed, an entire array of functions is added to those previously available with the Pascal System.

Since I am not familiar with the Apple Pascal System, suffice it to say that the documentation provided seems clear and complete. The Power Case System was initially designed to be used with the *Power Text Word Processing System* (also a product of Beaman Porter) which is a Pascal System. You are, therefore, assured that Pascal and the Power Case System are totally compatible.

Although no mention of CP/M and the Z80 softcard can be found in the Power Case documentation, I have found that the Power Case System works very well under CP/M. CP/M, as provided with the Z80 softcard, is configured to change all lowercase characters into uppercase letters. Using the CONFIGIO routine as described on page 5-16 of the Microsoft Softcard documentation, the CP/M system disk may be reconfigured to take advantage of the Power Case ROM chip to display lowercase text. For upper/lowercase text, the Microsoft Softcard documentation contains a simple machine language routine which can be patched into the CP/M BIOS system.

As far as compatibility of Power Case with smart terminal packages, I have used it successfully with both *Data Capture 4.0* and *Z-Term* to communicate with Compuserve and other time-sharing systems.

In conclusion, the Power Case System is easy to use and works well with all three commonly used Apple operating systems. It is nice to see a product which delivers what it promises at a very affordable price. I can recommend this product without any reservation.

SPY'S DEMISE™

by Alan Zeldin & Bob Hardy

Only \$19.95

More fun for your money
from Penguin Software.

Scattered about in the various buildings of the Soviet diplomatic mission in Pyongyang are the parts to an encoded message that could put you on Easy Street for the rest of your days. There are only two problems: Obtaining the entire code, and deciphering it.

The mission is patrolled by some pretty nasty security guards riding in elevators throughout each building. You, on the other hand, can carry no weapons if you are to sneak by the mission's metal detectors. After all, you're a spy, not an assassin. Too bad the same isn't true for the guards...

Spy's Demise: A dangerously addictive arcade/action game for Apple and now Atari computers.

Apple II version requires 48K and disk drive. Atari 400/800 Disk version requires 32K. Atari 400/800 Cassette version requires 24K.

Be sure to watch out for "The Spy Strikes Back", coming soon to a computer store near you!

Sprinter II

In my work as a neurophysiologist, I designed a simulation of a nervous network to run on a microcomputer. The only trouble was, to get a statistically significant sample of output from the simulation, I had to run the model for 2½ days on our HP-85. Something had to be done!

Actually, more than one thing. These things included changing from an HP-85 to a TRS-80, rewriting the simulation in a compiled language (Alcor Pascal), and increasing the speed of my computer. But which modification to use? Points of concern were:

1. How easy is the modification to make?
2. How much speed increase will there be?
3. Will it actually deliver?
4. Will it work under all the conditions necessary to gather and analyze the data?

After looking at the options available, I made what appeared to be the best choice, Holmes Engineering's Sprinter II.

Sprinter II, which lists for \$99, is the fastest speed up modification for the TRS-80 Model I and III currently available. It is also the easiest to install and one of the least expensive. The Sprinter II gives you 16 different speeds from which to choose, all integer multiples or dividends of the standard 1.77 MHz clock speed. For Model I machines without an expansion interface, an optional printer port can be provided as well for an additional \$24. Since I have a disk system, I did not need the printer port.

Bruce Powel Douglass

Installation

The installation of the Sprinter II was certainly one of the less traumatic surgeries my TRS-80 has undergone in

The installation of the Sprinter II was certainly one of the less traumatic surgeries my TRS-80 has undergone in its short life.

its short life. First, you remove the cover of the keyboard, and (carefully!) remove the Z80 chip from its socket. A flat screwdriver works well for this. Then,

you take the Holmes Sprinter II (which has its own Z80B processor in it) and plug it into the empty Z80 socket. Four wires with special solderless clips are placed on specific pins on different chips (no soldering at all need be done). Then you reassemble your computer and the job is done. Life should be so simple.

The modification just described will work on all machines, but depending on the components, you may not see your machine running at 5.3 MHz. As the manual says, "All TRS-80s were not created equal." There are many reasons why your machine may not run as is at 5.3 MHz. Most computers will run at a clock speed that is less than 5.3 MHz, but nevertheless faster than the normal 1.77 MHz.

For example, some TRS-80s were made with RAM chips that run at 450 ns rather than the current standard of 200 ns or 150 ns. You may have to replace these to run your TRS-80 at three times normal speed. Or, you may have to solder 1K resistors to avoid loading the RAM chips, etc. However, the man-

The Sprinter II from Holmes Engineering.

Bruce Powel Douglass, 1005 W. Main, Vermillion, SD 57069.

ual states that in all cases, the manufacturer has been able to get a TRS-80 to run at 5.3 MHz with extra wait states for memory access. If worse comes to worse, you can send your keyboard unit to them, and they will make the installation for you and charge you for the parts and labor necessary for modifications they will have to make to get the machine working at 5.3 MHz. The manual describes a number of fixes for machines that won't run at top speed.

My own experience was that installation of the Sprinter II enabled the machine to run at twice normal speed, but it just wouldn't run at three times normal speed. I talked to the helpful engineers at Holmes and discussed my problems. We decided that the modifications necessary to get it working at three times normal speed (5.3 MHz) were beyond my admittedly meager soldering abilities, and I packed my keyboard off to them to make the modifications (I *really* wanted to get it running at 5.3 MHz!). The service bill was a modest \$60 for labor and parts—a most worthwhile investment.

The installation manual is clear and concise. It has photographs to show exactly where the solderless clips should be attached, and which trace to cut in an optional modification that really ought to be made. The manual explains how to take the cover off the computer and how to put the screws back in when you are done. The most inexperienced hacker should be able to follow the manual without error.

The troubleshooting guide describes common problems and solutions. These all refer to errors you may have made in the installation procedure or to particular parts in your system that may be failing at high speed. The manual also

```

```

describes some optional modifications to disable the automatic changes back to normal speed during cassette or disk I/O. The Sprinter II automatically returns to normal speed when one of these operations takes place, and then returns to its previous speed when the I/O is completed. These optional changes allow you to run high-speed tapes, and double density 8" floppy disk drives. The unmodified TRS-80 cannot operate an 8" drive.

Running The High Speed Mod

Controlling the clock speed couldn't be easier. The control for clock speed is all software. The BASIC OUT 254,X statement is used to adjust the speed anywhere from $\frac{1}{3}$ normal speed to three times normal speed. Your TRS-80 may not work at some of these speeds for the reasons mentioned above. A little experimentation will show you which is the fastest speed for your machine.

Machine language can also be used to control speed. Since TRS-80 DOSes don't allow an OUT from DOS, I wrote

the simple assembly language program, Fast, shown in Listing 1.

Fast is a simple program that executes automatically at a system boot. It outputs a 12 to port 254, displays a message to that effect, and then returns to DOS. I wrote another program called Slow, which returns the machine to the normal 1.77 MHz clock speed by sending a 0 to the port (it hasn't been used yet). Using the Sprinter II is that simple.

Although initially I could get my TRS-80 to run at only twice normal speed, Holmes Engineering installed the necessary modifications to enable it to run at 5.3 MHz with wait states added during memory access. I have used the modification without any problems whatsoever on any programs, including database management programs, compilers, statistical and other mathematical analysis programs, and programs to load neurological data from an external A/D converter connected to electrodes stuck in my pet leeches. I boot, my DOS automatically executes Fast, and I go (quickly) from there.

The biggest problem I have had with it is rewriting the timing loops in Basic and machine language programs because my TRS-80 is executing so fast. If you play games that play music, the music will, of course, be much faster. A simple fix for that would be to find the music output routine in memory and have it multiply the value for the tone length delay constant by the command of the increase in speed, and then execute the tone. For a machine running at twice normal speed, you shift the number left one bit, so it's quite easy to program.

If you find your TRS-80 a little slow starting in the morning, try a healthy dose of Sprinter from Holmes Engineering. It is an inexpensive but high quality modification that is truly easy to make and to use. By the way, my simulation now runs in 15 minutes.

Holmes Engineering, 3555 South 3200 West, Salt Lake City, UT 84119. □

Wide Angle Atari

Group Commander Ahta Reeh checked the Galactic Map and pinpointed what was surely the last pocket of Zylon resistance in Sector 707. "It's about time," the stalwart defender of the universe thought. "Let's get this over with. I've got some heavy duty word processing to do this evening."

Star Cruiser Seven made the hyperspace jump with ease and materialized

The combination of an 80-column text display and the right software can greatly enhance the utility of a personal computer.

within 50 centons of what the battle computer identified as an all too familiar Tie Fighter. A wave of compassion swept over Reeh, who thumbed the sub-space radio on and beamed an offer of clemency to the doomed Zylon ship.

"Drop your shields and surrender, General Rejistor. I've no desire to shed any more green blood today."

The alien's reply was more hissed than uttered. "We Zylons do not bargain with crude savages armed with pre-atomic tools...even your battle computer displays are only a pitiful forty columns wide!"

Arlan R. Levitan, 12709 Borgman, Huntington Woods, MI 48070.

Arlan Levitan

Reeh's grip on the phaser bank trigger slowly tightened...

Meanwhile, Back on Earth...

Believe it or not, there are life forms around today that echo sentiments similar to those of our fictional Zylons. Namely, that if a computer doesn't have an 80-column display, it can't be taken seriously. While such a position is rather extreme, it must be acknowledged that the combination of an 80-column text display and the right software can greatly enhance the utility of a personal computer for some users.

Microcomputer owners who regularly access computer time-sharing systems are among those who can benefit. Most large and medium sized commercial computer systems are customarily accessed with video terminals that display 24 lines of text, with 80 characters per line. Many data processing professionals use personal computers to work from home during off hours, and working with 80-column format material on a 40-column screen can be quite confusing, especially if column-oriented data are involved.

A standard feature of many professional word processing systems is the ability to format text to a screen display that can accurately preview how a document will look on paper before actually printing it. Errors that require reformatting text or changing data may be caught before subjecting your printer to unnecessary wear and your wallet to paying for wasted paper.

In short, more data on the screen can

mean more usable information presented to you, the user, at one time.

Special circuit cards that make it possible for computers such as the Apple II to display 80 columns rather than the usual 40 have been available for several years. The Bit 3 Computer Corporation has drawn upon its experience in this area and released an 80-column board designed to expand the text display capabilities of the Atari 800 computer. Before getting into the details of Bit 3's Full-View 80 board, a discussion of why many home computers, including the Atari, are designed to display fewer than 80 characters per line is in order.

The designers of the Atari 800 personal computer structured the text and graphics displays of the system around the capabilities of the most common color video display device found in the home, the television set. While this design eliminated the need for Atari own-

Bit 3 80-column board.

WordPerfect

A word processor should be an extension of your mind.

A good word processor should feel comfortable, and let you put your thoughts down quickly, almost effortlessly. It should have automatic everything, and include footnotes, merge, columns and math. The screen should be uncluttered and give you an honest view of your text without annoying codes.

WordPerfect does all this and has proven itself at places like Harvard, RCA, State Farm, and Texaco. The software is well documented, is guaranteed, and is available for immediate delivery. For more information write or call

CAN A COMPUTER MAKE YOU CRY?

■ Right now, no one knows. This is partly because many would consider the very idea frivolous. But it's also because whoever successfully answers this question must first have answered several others.

● Why do we cry? Why do we laugh, or love, or smile? What are the touchstones of our emotions?

■ Until now, the people who asked such questions tended not to be the same people who ran software companies. Instead, they were writers, filmmakers, painters, musicians. They were, in the traditional sense, artists.

■ We're about to change that tradition. The name of our company is Electronic Arts.

SOFTWARE WORTHY OF THE MINDS THAT USE IT. We are a new association of electronic artists united by a common goal — to fulfill the enormous potential of the personal computer.

● In the short term, this means transcending its present use as a facilitator of unimaginative tasks and a medium for blasting aliens. In the long term, however, we can expect a great deal more.

■ These are wondrous machines we have created, and in them can be seen a bit of their makers. It is as if we had invested them with the image of our minds. And through them, we are learning more and more about ourselves.

■ We learn, for instance, that we are more entertained by the involvement of our imaginations than by passive viewing and listening. We learn that we are better taught by experience than by memorization. And we learn that the traditional

distinctions — the ones that are made between art and entertainment and education — don't always apply.

TOWARD A LANGUAGE OF DREAMS. In short, we are finding that the computer can be more than just a processor of data.

● It is a communications medium: an interactive tool that can bring people's thoughts and feelings closer together, perhaps closer than ever before. And while fifty years from now, its creation may seem no more important than the advent of motion pictures or television, there is a chance it will mean something more.

■ Something along the lines of a universal language of ideas and emotions. Something like a smile.

■ The first publications of Electronic Arts are now available. We suspect you'll be hearing a lot about them. Some of them are games like you've never seen before, that get more out of your computer than other games ever have. Others are harder to categorize — and we like that.

WATCH US. We're providing a special environment for talented, independent software artists. It's a supportive environment, in which big ideas are given room to grow. And some of America's most respected software artists are beginning to take notice.

● We think our current work reflects this very special commitment. And though we are few in number today and apart from the mainstream of the mass software marketplace, we are confident that both time and vision are on our side.

■ Join us.

We see farther. **ELECTRONIC ARTS™**

SOFTWARE ARTISTS? "I'm not so sure there are any software artists yet," says Bill Budge. "We've got to earn that title." Pictured here are a few people who have come as close to earning it as anyone we know.

■ That's Mr. Budge himself, creator of PINBALL CONSTRUCTION SET, at the upper right. To his left are Anne Westfall and Jon Freeman who, along with their colleagues at Free Fall Associates, created ARCHON and MURDER ON THE ZINDERNEUF.

■ Left of them is Dan Bunten of Ozark Softscape, the firm that wrote M.U.L.E. To Dan's left are Mike Abbot (top) and Matt Alexander (bottom), authors of HARD HAT MACK. In the center is John Field, creator of AXIS ASSASSIN and THE LAST GLADIATOR. David Maynard, lower right, is the man responsible for WORMS?

When you see what they've accomplished, we think you'll agree with us that they can call themselves whatever they want.

“What if ...

I want it faster?”

Now you can speed up your VisiCalc® (and almost everything else your Apple® II does) with the Accelerator II. Just plug in one board, and watch your models recalculate in less than a third of the usual time! Data bases, Applesoft, Pascal, etc. (even Apple Invaders) run about 3.6 times faster with the Accelerator II.

The Accelerator II is designed for the Apple II and II Plus. The Accelerator IIE will be available soon for the Apple IIE. The Accelerator boards are based on a fast 6502 processor with its own memory and built-in, high speed Language Card. The fast 6502 runs in parallel with the Apple's standard 6502. It's like putting an extra, faster Apple inside your original Apple.

For even more VisiCalc power, add a Saturn RAM Board and the VC-Expand software to get more memory, FAST SAVE/FAST LOAD, and VARIABLE COLUMN WIDTH.

See your local computer dealer or contact Saturn Systems for more

A look at the 80-column character set of the Full-View 80.

ers to purchase a special monitor, it did impose certain limits upon the amount of text that could be displayed.

Living Within Limits

A measurement referred to as bandwidth is the major determinant of the number of separate dots per line that may be clearly displayed. It is not necessary for us to get into the mathematics involved in determining bandwidth. All you need to remember is that the higher the rated bandwidth of a monitor, the finer its horizontal display can be. To display clearly the output of the Full-View 80, Bit 3 recommends a display monitor having a minimum bandwidth of 10 MHz. The average color TV has a bandwidth of only 3 MHz, and even the best component color monitors driven by standard video signals are rated at only 6 MHz.

Why do we need a monitor with such a high bandwidth? All because of a tiny creature called a pixel—the smallest separate dot of light that can be displayed by most computers on a video screen. The Atari 400 and 800 can display a maximum of 320 such dots on a single horizontal line, and can stack 192 such lines up to fill the TV screen. The Atari display is therefore said to have a maximum display resolution of 320×192 . This is very close to the maximum number of pixels that the TV itself can display.

The screen editor on the Atari displays each text character as a pattern of lighted dots within an 8×8 matrix or cell. Dividing the horizontal and vertical resolution by the number of pixels each

character uses, we arrive at a display of $320/8 \times 192/8$ or 40×24 .

Can't we squeeze more text onto each line by using a smaller matrix for each character? Yes, but doing so reduces the legibility of the display as the width of each character narrows. Software packages that display 64 or 80 characters per line by using smaller cell width usually also provide the user with a good case of eyestrain.

Eighty-column boards overcome the limits of resolution built into many personal computers by incorporating independent circuitry capable of generating extremely high resolution monochrome displays. The Full-View 80 uses an 8×10 cell matrix for each of the 80 characters on each display line. The resolution of the 80-column by 24-line display is therefore 640 horizontal by 240 vertical pixels. The large number of dots in the display is why the FV80 requires a high-resolution monitor. The introduction of the 24-page user manual and the label on the board clearly state that the unit will not work with a TV set.

This makes a high quality monochrome monitor the most logical choice for use as a display unit with the FV80. Such monitors typically range in price from \$100 to \$250 and are available in a variety of display colors. Green phosphor displays are generally the easiest on the eyes, but black and white and even amber displays are available to suit individual tastes. I used a Kaga Model KG12N 12" green phosphor monitor (one of those recommended by Bit 3) to make the photographs that appear here.

Even a novice will find installation of

the FV80 easy to accomplish by following the clear instructions given in the manual. The board simply plugs into the last memory slot of the Atari. A thin, flat set of wires attached to the FV80 is run out of the memory cage and the system cover is reinstalled. Metallic tape is supplied to keep the cover from cutting into the flat ribbon wire. The wire terminates in two separate plugs. One is connected to the five-pin jack on the right side of the 800, the other to the monitor.

While there is no minimum RAM requirement for using the device, this hardware set-up does impose a few restrictions.

Since the FV80 uses the last memory slot in the Atari, a 32K memory board must be used in conjunction with one 16K card to run a full 48K system. Although Bit 3 recommends their own Memory-Plus board, any good quality 32K unit will suffice.

Also, if you are already using that five-pin jack to feed the Atari audio signal through your stereo system or a color video signal into a TV with video input jacks, it will be necessary to build a simple Y-connector to continue doing so.

Operation

The Bit 3 board did not interfere with any of the regular Atari software I ran. The on-board circuitry of the FV80 remains dormant unless it is specifically activated. The simplest way to do this is to type `A=USR(54818)` directly from Atari 8K cartridge Basic. This jumps to a routine located in an EPROM on the FV80 board that works some internal magic (actually, it installs the FV80 as a new device in the device table and re-directs output normally vectored to the screen editor to the Bit 3). The screen blinks, clears, and the familiar `READY` prompt from Basic appears at the top of the now 80-column display. Happily, any program that was in memory before the USR jump will still be there.

The character set produced by the board is crisp and readable. All the full screen editing capabilities of the Atari are retained and some new functions are added. `CTR-Cf` toggles the cursor character between an underline and the familiar inverse block. All characters on a single line to the right of the cursor may be erased by typing `CTRL-E`. On the drastic side is `CTRL-S` which will erase everything on the screen past the present cursor position. I soon found that I preferred the underline cursor and that the delete to end of line feature was a real plus.

Another feature is described as a Video Switch. The manual makes it sound as though you can flip between

Put your Micro on IBM's level

Now you can communicate with the IBM world with Innovative Data Technology's 1/2" magnetic tape peripherals.

Popular configurations and optimum performance for most small systems that feature industry-standard interfaces, rapid data transfer rates, full operating and command subsets and a wide selection of models and configurations, IDT's magnetic tape subsystems provide economical and reliable data/program interchange, 40M bytes of storage and disc back-up. All IDT subsystems come complete and include tape transport, formatter, intelligent controller, computer resident coupler, cables, documentation and software.

But most importantly, they help put your system in touch with the IBM universe.

40- and 80-column displays by typing CTRL-A and CTRL-B respectively. This is not exactly the case. What the switch does do is flip between text and Atari graphics modes. Once turned on, the FV80 display is automatically deactivated by graphics modes other than zero and reactivated by returning to graphics 0. This makes it possible to alternate 80-column text displays and graphics screens under program control.

If any of the control codes normally interpreted by the FV80 as editing or function commands are required to be entered as text, the character must be preceded with an escape code (ESC), or alternatively, all control code execution may be deselected with a single POKE.

Caveats

Although the performance of the FV80 is quite satisfactory, a few caveats are in order. This is a new device, the first of its kind for the Atari, and I did

***The character set
produced by the board
is crisp and readable.***

discover some flaws in the Bit 3 unit, all of them involving the on-board control software:

CTRL-3 is not supported as end of file for the screen editor. Some software makes use of this feature. I found myself "lost in the ozone" after preparing a screen full of data and attempting to enter an EOF by typing CTRL-3.

The graphic representations of the characters for CTRL-F, G, H, J, ,, comma and period are wrong on the FV80. For example, a CTRL-F printed as a graphics club. Even though machine language strings containing any of these characters were incorrect in their screen appearance, they were correct internally and functioned properly. A factory technician stated that correct representations of these characters were attempted at first and were judged to be visually displeasing. Bit 3 subsequently opted to substitute other characters for them and does not plan to correct the situation at this time.

A GRAPHICS 0 statement does not clear the screen and position the cursor at the top of the display.

Although the speed of the display under most circumstances is fine, the execution of the Insert Line function is noticeably slothlike.

Fortunately, items one and three can be remedied by changes to the FV80 firmware. According to Bit 3, new EPROMs incorporating such revisions

will be made available at nominal cost to present FV80 owners in the near future. The technical staff at the factory returned all of my calls promptly and were extremely courteous and helpful. Bit 3's confidence in the board is evidenced by a one-year warranty, a welcome change from the usual three-month guarantees so prevalent these days.

The manual contains a good deal of technical information, including descriptions of firmware and hardware characteristics, and instructions for making custom character sets for those who have access to EPROM burners. The FV80 character set is not redefinable on the fly, as is the standard Atari display.

A short list of compatible software is also provided, as well as instructions for using the board with Atari Microsoft Basic. At this time, only one manufacturer has committed to produce packages written especially for the Full-View 80. Before rushing out and spending \$349.95 on an FV80 board, and another healthy chunk of cash for a monochrome monitor and 80-column software, you would be well advised to insure that the software available fully meets your expectations and anticipated needs.

Although many straight text-oriented Basic programs may work without major modification on the FV80, much software will not, and modifying existing software is out of the question for most casual users. For example, I was able to get my all machine code smart T.H.E. Terminal program to work with 80 columns only because the author, Tom Giese, is a fellow MACE (Michigan Atari Computer Enthusiasts) member and was willing to drop by and work things out. The average user just can't count on support like that. Even those with some degree of skill can forget about modifying protected software.

The only word processing package currently available that takes advantage of the FV80 is *Letter Perfect* from LJK Enterprises in St. Louis, Mo.

Hardware does not make software happen by virtue of its very existence. If the Full-View 80 is to gain wide acceptance, Bit 3 must actively promote the product within the software development community. Hopefully, existing products such as word processors, terminal programs and databases will be modified to support both 40- and 80-column modes at little or no additional charge. Let's hope more software authors are bitten by the 80-column bug. The Full-View 80 hardware is ready for them and is certainly up to snuff.

LJK Enterprises, 7852 Big Bend Blvd., St. Louis, MO 63119. ☐

WordStar runs on the IBM PC, Apple Computer with CP/M® card and all CP/M®-based computers. IBM, Apple and CP/M are registered trademarks of IBM Corp., Apple Computer Inc. and Digital Research Inc., respectively.

For the name of the dealer nearest you, phone (800) 227-2400, ext. 948; in California, (800) 772-2666, ext. 948. For more information,

WordStar® is used by more people, more often, to do more things than any other word processing software.

And you'll find it'll do more for you.

The only surprise you'll get with WordStar is how much you can do with it.

Ask Arthur C. Clarke. He used WordStar to write his best selling novel, 2010: Odyssey Two.

Ask Osborne-McGraw Hill. Where the editors use it to produce all the books.

Or, for that matter, ask any of over 400,000 others who swear by WordStar's reliability when it comes to making fast work of the written page.

And no wonder.

WordStar has more work-saving features to take the time and drudgery out of revising and retyping than any other word processing software. For instance, there are production typing features to let you move columns around and merge paragraphs from different documents at the touch of a key. Along with print features like boldfacing and centering to make any late-night typist look like a pro.

But that's not to say you have to be a pro. WordStar starts off by simply giving you a choice, and then guides you with menus every step of the way. Menus adjust to your proficiency. And of course, what you see on the screen is what you get on paper.

Then as your needs grow, WordStar can grow right along with you. With options like MailMerge®, SpellStar® and StarIndex™ to help you personalize form letters, correct spelling and create indexes. And with other MicroPro products like InfoStar™ and CalcStar™ so you can automatically insert business data and financial projections into WordStar documents.

WordStar runs on almost every personal computer. Which means you don't have to go out of your way to find the word processing software that can do more for you.

Just take a walk over to your local computer store and ask for WordStar. You'll be on the right path.

MicroPro®
Software that means Business

CIRCLE 307 ON READER SERVICE CARD

TI's new Compact Computer. It takes over your work, not your desk.

The ordinary personal computer occupies too much of the ordinary desk.

Now Texas Instruments brings you a cordless compact computer that solves the same sort of problems as the Apple™ or IBM™ personal computer. It has enough memory and power for complex problems in business and science, yet the whole thing is smaller than a magazine page.

Sophisticated software is available right now for finance, statistics, production planning, graphics—and spreadsheet and wordprocessing are just around the corner.

For most personal computer tasks, its 6K RAM and 34K ROM are ample. The system is easily, economically expanded.

The TI Compact Computer 40 has peripherals that make it even more useful:

a 4-color printer/plotter; an RS-232 interface for talking with other computers or running a larger printer; and TI Wafertape™ drive for program or data storage. TI Solid State Software™ cartridges offer you a choice of convenient, foolproof programs.

Its built-in language is TI Enhanced BASIC, which allows you to write programs in everyday words. The integrated liquid crystal display shows 31 characters, which can be scrolled to show up to 80 per line. It operates on four AA alkaline batteries that give up to 200 hours of service.

The TI Compact Computer 40 offers solutions anywhere you go. Yet it retails for less than 1/3* the price of Apple™ or IBM™ personal computers. The TI Compact Computer—compact in price and size, but not in power. See it soon at your Texas Instruments retailer.

Creating useful products
and services for you.

A Letter Quality Alternative For Atari Users

You want letter quality capabilities on your Atari system, but Atari makes only dot matrix printers. So you decide to wait until they produce a letter quality printer instead of fighting with interfacing to non-Atari printers right? Well, you don't really have to wait. By using the Atari 850 interface module you can use any parallel printer or RS-232 serial printer on the market.

But, be forewarned. Interfacing other products to the Atari is not as easy as Atari would lead you to believe. I found this out the hard way. Although Atari does give you all the information necessary to use the interface module properly, you must glean the facts from three different manuals. This article explains some of the problems encountered in interfacing an Anderson Jacobson 832 (RS-232) to the Atari, and offers some solutions that should apply to many other RS-232 printers as well.

One of the first problems faced by any new printer owner is getting a cable to connect the computer to the printer. I was no exception. Although the literature on the 850 says it is standard RS-232, it has only 9-pin connectors. Most printers use 25-pin connectors so you need a cable to convert the signals coming from the 25-pin connector into signals recognized by the 9-pin connector.

Now I am not an electronics expert, so I wouldn't even attempt to create my own cable. Since I use port 1 on the 850

Nancy Blumenstalk Mingus

for a modem, I wanted port 2 to be my printer port. With the wiring diagram for port 2 and the wiring diagram for the Anderson Jacobson printer in hand, I located a good electrician and he kindly wired everything correctly for me. If you don't know anyone in your area who does this kind of work, your local Atari dealer should be able to help you.

Once everything is connected properly, there are a few other things you need to remember when using the printer. The most important of these concerns the disk drive. If you plan to use a disk drive with your interface module and printer you must have DOS II as your disk operating system.

There is a special file in DOS II called AUTORUN.SYS which automatically runs when you turn on the computer. This affects the power up sequence you use. You must first turn on the printer, then the disk drive, then the interface module, and finally the computer. Also, be sure you have the Basic ROM pac in place.

Most of the above is explained in the 850 manual, but they make no mention of the AUTORUN.SYS file. The problem I encountered was error number 130 when I tried to open the printer port. This message indicates that the interface module can find no such device. What had happened was that the system disk I had created from the master disk had not copied the AUTORUN.SYS file.

Once I copied the file on to the system diskette, I could then open the printer port.

Trying to print or list on the printer is now a fairly simple matter. To print to it, I just type:

```
OPEN #2, 8, 0, "R2:"
```

where:

OPEN signifies initialization of a device or file.

#2 indicates the channel number being used. It can be any number 1 through 8.

8 means opening the channel for output only, which is all that is required for a printer.

0 this argument is not used, so will always be zero.

"R2:" refers to the port being used. The 2 signifies port 2.

Any subsequent printing statement takes the following form:

```
PRINT #2; "Anything", variable
```

where:

PRINT is the standard Basic PRINT command.

#2 is the channel previously defined in an OPEN.

To close the device or file, you enter:

```
CLOSE #2
```

where:

CLOSE means you are terminating the use of a channel.

#2 is the channel being closed.

Again, this is explained fairly well in the interface module manual. The LIST command however, is somewhat confusing. To LIST to the printer, instead of

TAKE OUR CHARTING SYSTEM FOR A TEST PLOT.

We're not going to tell you how fast and easy our CHART EAS-ALYZER™ is to use. We'd rather show you. Moving averages, momentum, relative strength, on-balance volume, trend-lines, envelopes, — you name it, you can chart it. For only \$29.95 we'll send you a manual and demo system you can run on any Apple II.

So, market timers, if you'd like to look at the easiest charting software package on the market, the time is now.

☐ **YES!** I'd like to take the \$395.00 CHART EAS-ALYZER for a test plot for only \$29.95.

☐ **INTERESTING, BUT** just send me more information.

P.O. BOX 562 • WALL STREET STATION •
NEW YORK, N.Y. 10268

LIST #2 as you might expect, you must type:

LIST "R2"

where:

LIST functions the same as usual.

"R2" is the port number you are listening through.

Now that you know how to connect your printer, list a program, and print lines to the printer you are almost ready to start. There is however, one last problem. The default configurations of the RS-232 ports as shown in the 850 manual need one modification because the ports do not send a linefeed when they send a carriage return. That is, when the printhead returns to the left margin of the paper, the paper does not roll up one line. So all your lines print on top of each other. To change this, you must reconfigure one aspect of the printer port with which you are working. Again,

I use port 2, and the command I use is:
XIO 38,#2,64,0,"R2:"

where:

XIO is a special command used to configure various aspects of a port.

38 is the particular XIO command type.

#2 is the channel number being used.

64 is a decimal code meaning turn on linefeed.

0 as in the OPEN command, remains zero.

"R2" is the printer port.

Before you can do a list, you must enter this command, and to be safe, you should include it in any program you write which requires more than one line to be printed on the printer.

Now you should be in fairly good shape to start using that nice letter quality printer. ☐

CREATIVE COMPUTING

WIN AN ATARI®

SWEEPSTAKE

Save up to 33% on *Creative Computing*, too!

The Creative Computing Sweepstakes is open to all our readers. No purchase is necessary—and you'll receive a fantastic Atari home computer system worth over \$1600 if you're the lucky winner!

How the Sweepstakes works

Just mail the attached card or the coupon below after filling in your name and address. Be sure to indicate whether you're also subscribing to *Creative Computing* at the special rates shown—you can save as much as 33%.

Then, if you win, you'll get a superb Atari personal computer system: the Atari 800 with 16K RAM and 10K ROM...an 810 Disk Drive...a 16K RAM Memory Module for extra memory...a pair of Joystick Controllers for game interaction. Use the Atari to handle small business and professional applications as well as sophisticated home processing functions—and, of course, for entertainment. Analyze your investments, learn languages, do

business accounting, play video games. Programmable in Basic or Assembly, the 800 can use all Atari peripherals and can control up to four disk drives and a 60 lpm printer. In all, the 800 and its accessories form a package worth a full \$1620 at retail!

You're sure to win with *Creative Computing*!

Whether you win our Sweepstakes or not, the hours you spend with a computer are certain to be winners when you subscribe to *Creative Computing*. It's the Number One magazine of computer applications and software—filled with in-depth evaluations of computers, peripherals and software, plus applications and software that you can run directly on your computer.

Why not enjoy a year or more of *Creative Computing* at our low introductory prices? You'll save up to 33% if you subscribe at the same time you enter our Sweepstakes!

Atari is a registered trademark of Atari, Inc.

OFFICIAL RULES

No Purchase Necessary

- On an official entry form or a 3" x 5" piece of paper, hand print your name, address and zip code. Enter as often as you wish, but mail each entry separately to Creative Computing Sweepstakes, P.O. Box 5212, Boulder, Colorado 80322. Entries must be received no later than August 31, 1983, and the drawing will be held by September 21, 1983. All entries become the property of Creative Computing, which reserves the right to reprint the name and address of the winner.
- The winner will be selected in a random drawing from among all entries received, under the supervision of the publishers of *Creative Computing*, whose decision will be final. Only one prize will be awarded in this Sweepstakes. Winner will be notified by mail and may be required to execute affidavit of eligibility and release. Odds of winning will depend on the number of entries received. *Creative Computing* will arrange delivery of prize. Taxes are the responsibility of the winner. Any manufacturer's claims and warranties will apply, but *Creative Computing* makes no claims or warranties with regard to any prizes. Prize is not transferable. No substitutions for prizes.
- Sweepstakes open to all residents of the U.S., its territories and possessions, except employees (and their families) of *Creative Computing*, its affiliates, and its advertising and promotion agencies. Void wherever prohibited or restricted by law.
- For the winner's name, send a stamped, self-addressed envelope to *Creative Computing Sweepstakes*, Circulation Department, One Park Avenue, New York, N.Y. 10016.

OFFICIAL ENTRY FORM

Mail to: Creative Computing Sweepstakes
P.O. Box 5212, Boulder, Colorado 80322

☐ **YES!** Enter my name in the Creative Computing Sweepstakes and start my subscription to *Creative Computing* for the term checked:

- ☐ One year (12 issues) only \$19.97—20% off!
- ☐ Two years only \$36.97—26% off!
- ☐ Three years only \$49.97—33% off!

Savings based on full one-year subscription price of \$24.97.

☐ **NO** I don't wish to subscribe now, but tell me if I've won the Creative Computing Sweepstakes.

CHECK ONE:

- ☐ Payment enclosed.
- ☐ Bill me later.

THE 8TH WEST COAST COMPUTERFAIRE

San Francisco

March 18-20, 1983

"The king is dead. Long live the king." This is the cry that rings out in Britain upon the death of a king and the ascendency to the throne of the next monarch in line. (Of course, other permutations are possible: queen, queen; king, queen; and queen, king.)

This phrase came to mind more than once as I wandered the aisles and talked to exhibitors and attendees at the Eighth West Coast Computer Faire.

Just as *Creative Computing* is the oldest surviving magazine in the personal computing field (Vol. 1, No. 1 was published in November 1974), the Faire is the oldest surviving consumer show in the field. John Dilks's Personal Computing Festival in Atlantic City predated the first West Coast Faire by over 1-1/2 years, but unfortunately John didn't have the staying power (persistence) that Jim Warren has exhibited with the West Coast Faires.

Sure, there were disasters (who can forget the Los Angeles debacle?), but, for

David H. Ahl

the most part, Jim did things right. He kept in close touch with the industry—vital for running a good show. Jim is a computer guy first and a show promoter second. But he is a good promoter and has consistently delivered hordes of quality attendees to a rapidly growing (and changing) industry.

Rumors were flying before and during the show that Jim sold the show to Pat McGovern (IDC, *Computerworld*, *Info-world*). In fact, three people told me the deal had been signed, sealed, and delivered.

However, as the show closed on Sunday, I was talking to Jim (on roller skates, as usual) when a call came over his walkie talkie, "Pat McGovern is waiting in your office."

"Tell him to call me tomorrow," was

Jim's reply. He went on to explain that his main reason for selling was to give him time to do something with computers again. However, Pat wanted him to stay on as show manager for several years, thus removing a great deal of the impetus for selling out. Hence, Jim was reconsidering. Who knows? By the time you read this everything could have changed around again.

But whether Jim sells or not, the show will continue to evolve. Initially, the Faire was a show for hobbyists, hackers, and fanatics. I'll never forget the first show in the Civic Auditorium. The aisles were so jammed on Saturday that you simply couldn't move. It was not a good place for someone with even a mild case of claustrophobia. People were five deep around the *Creative Computing* booth waving dollar bills for copies of the magazine or *Basic Computer Games*, our only book at the time.

As the market for personal computers

On set-up day, aisles are clogged with cartons, curtains, and cables.

CIRCLE 173 ON READER SERVICE CARD

By Saturday afternoon, the Faire was teeming with humanity.

Fred and Barbara Huntington, two of the nicest people in the software industry, pose in front of their booth.

has changed, so has the show. Despite a larger than ever attendance this year (50,000 or so), there was relatively little frantic activity. Most exhibitors went away satisfied, but a bit disappointed. "Too many lookers, not enough buyers," was a frequent comment.

Personally, I think there was just as much buying as at previous Faires, but it was spread across many more vendors. At previous Faires, manufacturers such as Apple, Cromemco, Commodore, and Processor Technology (remember them?) had huge booths to show off their wares, but they did not sell on the show floor. Thus, the vendors who were selling occupied less than half of the floor space.

This year, very few primary manufacturers were at the show, and those who were had modest booths. Thus, 90% of a much expanded exhibit space (extending to loading docks and balcony passages) was occupied by vendors with products to sell. As a result of this competition, the

Hobbyists could find enough connectors, diodes, ICs, and parts to build almost anything.

The discount vendors did a good business; by late Sunday, everything was going at a discount.

sales of each individual vendor were somewhat reduced.

So, perhaps the Faire as it used to be is dead. However, it will continue in a new guise. Long live the Faire.

Speaking of competition, in the area of magazines, seven new ones were introduced at the Faire. Apparently, several publishers see the need for a true home computing magazine; thus you will shortly be seeing *Micro Discovery*, *Digit*, and *Family Computing*. Another Commodore

The Apple booth was a constant beehive of activity.

Tronix' Kid Grid leaped out of a Vic and into the aisles of the Faire.

West Coast Faire, continued...

magazine, another Color Computer magazine, and another Atari magazine are also on the way. And our parent company, Ziff-Davis introduced *PC Tech Journal*.

Of Special Interest

We can't possibly cover all the activities and new products of the 450 some odd exhibitors here, so we've elected to report on some products of special interest. Others will be showing up in our new products section in forthcoming issues.

In a hotel room, Quadram Corp. was previewing a board for the IBM PC that simulates an Apple computer. Everything is on the board—microprocessor, 48K of memory and I/O and display drivers. It uses the keyboard, disk drives, display, and power supply of the PC. Because everything is on the board, when it is installed, the PC can actually do processing of both Apple and IBM programs simultaneously. Since the Apple board does not use the IBM PC memory, data can only be interchanged by writing and reading from disk; software is provided to do this. Price \$680.

Three floors up in another hotel room, Osborne was previewing the Osborne Executive. The main external differences between it and the Osborne 1 are that it has a 7" 24-line x 80-character amber display, two compact disk drives mounted in the left side of the housing, a power switch on the front, two serial ports, an IEEE 488 port, and a standard RCA jack for an external monitor. Internally, it has 128K of memory and is able to run synchronous communications software so it can talk to IBM mainframes using 3271 emulation. Also promised is emulation for 3780, 2780, 3741, and several others.

In addition, it will be able to emulate a wide variety of standard terminals—Beehive, Televideo, Hazeltine, etc.

Upon powering up, the machine goes through an extensive self-test. It then allows you to configure it in any way that you wish with five cursor options, reversed display, key click feedback, 50 or 60 Hz power, 15 communications baud rates, logical and physical device protocols, and various character sets. Price \$2495.

In about six months Osborne will also introduce the Executive II which will have an 8088 co-processor, an additional 128K of memory independent from the 128K for the Z80, and an IBM PC compatible video graphics system. Osborne expects that over 80 percent of IBM PC software will run on it. No price yet.

Giving Osborne a good run is the Access Computer which is the first portable to include a full-size built-in printer and acoustic modem. The access is a compact 16" x 10" x 10-3/4" and weighs 33 pounds. It has a 7" amber display, two double density disk drives, Z80 mpu, 64K of memory, 80 cps dot matrix printer and

both an acoustic coupler and direct-connect modem built in. The keyboard is detachable and has 76 keys including numeric keypad and 15 function keys. In addition to the built-in printer, the Access has a parallel port, IEEE 488 port, and two RS-232C ports.

The manufacturer, Access Matrix Corp., bundles a software library in with the Access including CP/M, M Basic, C Basic, *Fancy Font* (Softcraft), and Perfect Software's integrated programs, *Perfect Writer*, *Speller*, *Calc*, and *Filer*. Price \$2495.

On the other end of the spectrum, a new low-end entry from Venture Micro Inc., the Humdinger, will provide some strong competition for the Timex Sinclair, Video Technology VZ200, Mattel Aquarius, and TI 99/2. The Humdinger has a Z80 mpu, 4K of memory (expandable to 64K), 8K Basic in ROM, cassette I/O, parallel and serial ports, high resolution video (256 x 192 pixels) in eight colors, 12 graphics display modes, and four sound voices (five-octave range). The keyboard has 58 Chiclet-style rubber keys. A full array of peripherals and software is listed

The Osborne Executive has a 7" screen, two compact disk drives, and improved housing.

The Access computer has a detachable keyboard, 7" screen, two disk drives and built-in 80-col. printer.

It's everything you've ever wanted
and less . . . a lot less!

mockingboard™

sound effects and speech on a single peripheral

\$179

To hear all the exciting sound and speech being added to state-of-the-art programs, you need MOCKINGBOARD™. It's *the* tool used by virtually every software company you've ever heard of.

only

MOCKINGBOARD™ is the ^{only} speech and sound board on a single card with a 100% satisfaction guarantee and the industry wide support of **Datamost, Sierra On-Line, Penguin, Edu-Ware, Legend, Sir-Tech, Broderbund, Datasoft, Superior, Synergistic, Avalon Hill, Avant-Garde, EASI, Hayden, Lightning, Gebelli, Howard W. Sams, NEXA, Morningstar, Earthware, Vagabondo, AMI, American Educational, Funtastic, Budgeco, Designware, Winner's Circle, GYST** and more than sixty independent game programmers.

Speech and sound synthesizers can say a lot but, only MOCKINGBOARD™ can say that.

Inspect and experience MOCKINGBOARD™ before you purchase at fine computer stores everywhere. Or, if presently unavailable in your area, you can still hear what's going on without risk. Call **1-800-341-8001** and order MOCKINGBOARD™ Sound/Speech I for only \$179 direct from Sweet Micro Systems. Try it for 30 days. If you are not 100% satisfied, return MOCKINGBOARD™ for a no questions asked *refund*.*

Other MOCKINGBOARD™ versions: Speech I (speech only) \$99. Sound II (dual sound effects, no speech) \$129. By telephone: VISA, AMEX and MASTERCARD. By mail: major credit cards (with expiration date), personal check or money order. Please add \$3.50 for shipping and handling.

Who could ask for more (for less)?

mockingboard™

Sweet Micro Systems, 150 Chestnut Street, Providence, Rhode Island 02903 401-273-5333

MOCKINGBOARD™ is Apple II, Apple II-Plus and Apple IIe compatible.

Apple is a registered trademark of Apple Computer Company.

*Refund policy applies to sales made by Sweet Micro Systems and does not obligate individual retailers.

MAKE YOUR VIC-20 COMPUTER TALK

when you plug in our

ONLY
* \$79⁰⁰

VOICE SYNTHESIZER

You can program an unlimited number of words and sentences and even adjust volume and pitch. You can make:

- Adventure games that talk
- Real sound action games

This voice synthesizer is VOTRAX based and has features equivalent to other models costing over \$370.00. To make programming even easier, our unique voice editor will help you create words and sentences with easy to read, easy to use symbols. The data from the voice editor can then be easily transferred to your own programs to make customized talkies.

*FREE — Your choice of \$19.95 4" Speaker and Cabinet or \$14.95 Voice Editor if you order before June 15, 1983!

Phone 312/382-5244 to order

on the flyer and price list although we saw only the basic computer. Watch these pages for a complete review. Price \$129.95.

Artra, Inc. introduced Waldo, one of the most fascinating devices at the Faire.

PhotoCaster from Commsoft, Inc. is another nifty device for the Apple. Howard Nurse showed us how it could capture and display an image from a TV camera (b & w or color), send and receive an image over telephone lines in eight

seconds using the dithering process developed at Bell Labs, enhance the image using a joystick for entry, and print an image on a dot matrix printer such as the Epson MX-80. Images have a resolution of 128 x 128 pixels with each pixel having 16 gray levels. Color photos are composed of one frame for each of the red, green, and blue primary color images.

The Mockingboard comes in four flavors—sound effects only (\$99), sound in stereo (\$199), speech only (\$149), and sound effects/speech combination (\$299). Sound effects are produced with the General Instruments PSG which can produce the sounds of cannon fire, trains, weapons, and unearthly musical notes. Speech is produced with the Votrax SC-01, a phoneme type of chip with 64 phonic building blocks that can be combined to create any words you wish. It has the familiar Votrax Swedish accent.

American Bell had a mini-booth in an out-of-the-way downstairs corridor. The photo makes it look far better than it was.

With the growing interest in the use of remote information services, community bulletin boards, and the like, several manufacturers were showing inexpensive modems. Typical was the Eagle DC-2 direct-connect modem from Wilkison Engineering. It operates only at 300 baud and offers full and half duplex operation in one of two modes: originate/answer (Bell 103) or auto answer. A bargain at \$99.

There were hundreds of new games and game controllers for every imaginable computer. Kraft was showing an Atari-compatible joystick with a short throw and very fast action. Similar to their Apple joysticks, this is the first Atari stick designed for fingertip control.

Interfirm Systems had a track ball designed mainly to be a high-precision input device to replace CRT touch membranes, light pens, digital mice, optical mice, and joysticks. The product, Digit-Ball, is an optical track ball which produces 256 pulses per revolution of the ball. At \$99 it is a bit pricey for game control but if you can justify the cost for other uses, it sure will provide amazing control. Versions available for Apple, IBM, and Commodore 64.

Perhaps the strangest controller of all was being shown by Exersoft Corp. The

Foot-Craz is a foam pad that functions like an Atari joystick when one of the five colored dots is stepped on. Included with Foot-Craz is a jogging game (actually it is just jogging indoors), and Stomp, a game in which you stamp out colored bugs.

Sirius, Broderbund, Sierra On-Line, Datamost, Penguin, Datasoft, Adventure International and scores of others were showing new games. We'll review the best on these pages. However, let me mention briefly a new Synapse game, *Survivor*. This is billed as the first cooperative computer game (for up to four players).

Mary Griesinger of Adventure International shows off her neat racks before the show opened.

Survivor pits a navigator, propulsion engineer, and two gunners against a fleet of attacking ships and four heavily-armed space fortresses. It is amazing how one's playing style and strategy change when one has to communicate with others to win the game. Available for Atari (\$34.95); coming soon for Commodore 64, Vic-20, and T1 99/4A.

If your friends don't already know that you are a computer enthusiast, you might want to start sending computer greeting cards from Computer Greeting. A line of 24 disk-shaped cards is available for all occasions: birthdays, friendship, get well, new baby, etc.

Manufacturers and Reader Service

Below are the names and addresses of manufacturers mentioned above. For more information on any of the products mentioned, just circle the reader service number or write to the manufacturer directly (please mention *Creative Computing*).

The Executive Secretary

- Document editor
- Powerful printing program
- Flexible database
- Alphabetical indexer for books and theses
- Mail list merge for business letters
- Pre-printed forms manager
- Electronic mail

INTEGRATED means that all of the above is included in the \$250 suggested retail price, and that every part of the package follows the same rules. There's no need to learn one set of keypresses for the editor and a separate set of rules for the database.

RELIABLE means that thousands of users have logged more than 1,000,000 hours of use and that we back you up after the sale with a hot-line number printed right on the program disk.

INTEGRATED, RELIABLE, PROFESSIONAL WORD PROCESSING FOR THE APPLE II, \$250

THE EDITOR: Supports a wide variety of 80 column boards, or runs in 40 column mode on older Apples. A coupon for a free Revision 7 LCA is included.

THE PRINTER: You can embed format commands in your document and let our printer program handle all of your layout concerns. More than 40 embedded commands allow you to control every aspect of layout, including pagination, binding margins, flexible page headers, volume-length documents, outline indentation, and far more. You can employ electronic shorthand so that commonly used phrases are represented by three or fewer keystrokes. And if your printer is capable of it, you can do justification by incremental spacing, boldface, and more.

ELECTRONIC CARD FILE: With its ease of use, its multiple alphabetic and numeric sorts, its report options that include totals and subtotals, it is superior to many databases costing well over \$100.00.

MAIL LIST MERGE: You can write documents in the editor that call for information from the Electronic Card File and merge the information to produce customized forms and form letters. Conditional printing allows you to skip words, blocks of text, or entire letters based on your criteria. And you can also draw information from other popular databases.

For ■ IBM and ■ OLIVETTI, an enhanced version, with much more on-screen formatting and a built-in spelling checker is available.

ALPHABETICAL INDEXER: This unique tool allows you to specify page numbers for each occurrence of a term and to produce a properly formatted alphabetical index of those terms.

PRE-PRINTED FORMS MANAGER: Use a sequence of special embedded commands to define the row and column positions of the blanks on pre-printed forms. Our template helps you. Then use mail-list merging to combine information from your database with your pre-printed forms.

ELECTRONIC MAIL: With a Hayes Micromodem you can transfer your documents to another computer—or to your local typesetter for printing.

**Integrated
Reliable & Cheap
Word
Processing**

\$99.95

The Personal Secretary™

SOF/SYS, INC.

At last! Everything you need for integrated and reliable word processing on your Apple™ at a very cheap price... \$99.95 buys you everything including a lower case adapter and a shift key adapter.

The Personal Secretary™ is a little brother to the Executive Secretary™, one of the most comprehensive systems ever written for the Apple™. The Personal Secretary™ includes:

- A complete document editor with global search and replace, the ability to mark and move ranges of text, and all the other text management features most people expect.
- A built-in mailing list database (299 'cards' per file) with search and sort capabilities.
- Mail-list merging that allows you to produce customized form letters using the built-in database.
- Conditional printing with our powerful **>IF** command.
- A print program that lets you set all margins and embed commands to control centering, justification and indenting.
- Complete upward compatibility with the Executive Secretary™.
- An exchange credit of \$50.00 toward the purchase of the Executive Secretary™.
- A shift key wire to modify your Apple's™ shift key.
- A lower case adapter (for Revision 7 and later Apples™) to give your Apple™ true lower case characters.

Published by SOF/SYS, INC., makers of the Executive Secretary™, 4306 Upton Ave. So., Mpls., MN 55410, and available at a dealer near you. (612) 929-7104.

Adding Lowercase To Apple Writer

As part of the ongoing series of articles in the magazine dealing with modifications to *Apple Writer*, I offer the following patch.

I don't have a lower case adapter, but still wanted to send printer control codes to my Epson MX-80 printer. The patch to the PRINTER program of the *Apple Writer* package in Listing 1 lets you send such codes to your Epson MX-80 with Grafrax if you don't have a lower case adapter and haven't made any of the previous modifications to PRINTER or TEDITOR.

The jump at \$12D8 lets us jump to the modified character conversion routine at

Figure 1.

This is a test!!!

I. Introduction

This is a test of using the Epson printer's various capabilities from within Apple Writer. If it works it'll be a absolute **miracle!!!** Cross your fingers and hope for the best!

The title you see is a combination of double width, double strike and emphasized printing. The word "Introduction" is the same in regular width. Most of this text is in regular print. The word "miracle" above is in emphasized print.

As you can see all went well in the first couple paragraphs. Next we'll look at some other goodies. For example, here is a really small sentence:

"This sentence should be quite squished..."

and this should be squished and darker."

The second half was simply compressed with double strike, which is also useful in regular size...

Double strike...

You must be careful when using double strike however, as the entire line will be double-struck, and don't try to used underlining with double strike mode.

If you want to emphasize something, *you may want to use italics. Of course, italics can be even more impressive when used in **emphasized mode**. If you want, you can also use underlining, but you must be careful with that also (it's easier to use italics).*

UNDERLINING EXAMPLE

As you can see you can accomplish a variety of things with Apple Writer and your Epson printer. Hope you enjoy! Remember to use **emphasis** sparingly, it's easy to overuse it!

Sakata COLOR MONITORS

... we promise performance

SAKATA offers fine quality CRT DISPLAY MONITORS which are compatible with IBM, APPLE, ATARI 800, NEC and other fine personal computers.

Unusually attractive design with neutral color will enhance the appearance, provide unexcelled quality performance. Illustrated Model SC-100 is 13" **COLOR** Display Monitor with linear circuitry, composite color and a host of other quality features.

Also available: Model SG-1000 . . . 12" monochrome, high resolution CRT MONITOR. Model SC-200 . . . 13" RGB high resolution **COLOR** CRT MONITOR. Model SC-300 . . . 13" RGB, super high resolution **COLOR** CRT MONITOR. Priced below competition—if there is any.

SAKATA CRT MONITORS are available wherever personal computers are sold or write for technical and illustrated literature and prices.

DYNACOMP

*The Leading Distributor Of
Microcomputer Software*

PRESENTS

PERSONAL FINANCE SYSTEM:

One of the most complete financial management packages available. Keeps track of all tax deductible items, bank deposits, monthly charges, cash payments and more.

Personal Finance System automatically deducts check fees, gives complete financial summaries for any category on a per item, monthly or yearly basis, prints results in detail or summary form, and even plots results on a monthly bar graph. Available on diskette/disk only. *Price \$39.95 (diskette); \$42.45 (disk).*

BRIDGE MASTER™

After years of success with BRIDGE 2.0, we have decided to not simply upgrade this popular card program, but to totally rewrite it! the result is BRIDGE MASTER, the best overall bridge package available.

BRIDGE MASTER *BIDS* according to the Goren point count system. It *PLAYS* following the conventions. It *SCORES* according to the rules of duplicate bridge. BRIDGE MASTER's features include continuous display of the bid and score during play, attractive screen display, score keeping and analysis, 1,000,000 different hands, and more!

BRIDGE MASTER has received rave reviews and an "A" for value (The Book of Atari Software 1983).

Available on diskette only. Requires 48K.

Price: \$29.95 (diskette); \$32.45 (disk)

Apple /Lowercase, continued...

used to represent a backspace. If a \$26 is found, we load the accumulator with \$08, the true value for a backspace character. If any of these four is found, we jump back to the main routine, skipping over the part that sets the high bit of every character sent to the printer. If none of the four is found, we execute the character conversion routine as if nothing happened.

The reason we use a \$26 to represent a backspace and then change it to a true backspace just before printing is simple. A true backspace (\$08) appears on the screen as an inverse H. Since this is also the way a capital H is maintained by *Apple Writer*, this will cause a conflict. Selecting some seldom used symbol to represent a backspace and then converting just before printing resolves this conflict.

The printer control codes can then be incorporated as suggested on page 142 of the June 1982 issue of *Creative Computing*. Create a file with escapes (hex code = \$1B), underscores (\$5F), backspaces (\$26) and master spaces (\$40). Then use this file to create files to turn the various characteristics on and off (e.g., ESC E to turn on emphasized print, etc.) These can then be inserted via CTRL-I anywhere in your text. Some comments about this modification:

1. To turn off double strike or compressed modes, use the reset printer code (ESC @). This will return all printer characteristics to standard settings.

2. Using compressed and expanded type styles can spoil a line of printout unless the entire line is printed in that mode. *Apple Writer* counts characters to determine line length, and one line of regular size letters is about two lines if printed double-width and half a line if printed in compressed mode.

3. I was unable to use compressed and emphasized modes simultaneously. Use compressed and double strike to give essentially the same results.

4. Use the reset printer code (ESC @) on a line by itself when you use it. I had problems with left margin alignment when including it in the same line as other text.

5. Underlining can be accomplished by inserting the appropriate number of backspaces, and then the appropriate number of underscore characters. The Epson *does* respond to the backspace character, but *Apple Writer* counts all characters, so you may want to increase line length to insure that everything will be printed on one line. Underlining may enhance column titles, but italics are easier to use within the text (if you have Grafrax 80, that is.)

There you have it. I hope this lets you make better use of your *Apple Writer* and Epson printer. ☐

How to use computers to teach math!

COMPUTERS IN MATHEMATICS:

A SOURCE BOOK OF IDEAS

Now that more and more math departments have access to a micro-computer, the problem becomes: How to use the computer effectively as a teaching aid?

Here's where COMPUTERS IN MATHEMATICS can help you. This 224-page book of reprints from *Creative Computing* magazine is a goldmine of learning ideas, problem-solving strategies, programming hints, puzzles, brain teasers, and much more!

COMPUTERS IN MATHEMATICS covers nine subject areas:

- Computer literacy and computers in society.
- Thinking strategies and how to solve problems.
- Computer simulations and how to write them.
- Probability.
- Mathematical miscellany, from circular functions to differential equations.
- Art and graphics and their relation to mathematics.
- Computer Assisted Instruction (CAI).
- Programming style.
- Puzzles, problems and programming ideas.

8 1/4" x 11", softcover,
hundreds of black-and-white
diagrams and illustrations,
224 pp.

In all, COMPUTERS IN MATHEMATICS contains 77 fascinating articles, over 200 problems for assignment, and nearly 100 programs. Edited and with a preface by David H. Ahl, Editor-in-Chief of *Creative Computing*, this immensely practical volume is an invaluable classroom tool for teachers and students of all grades.

Printer Control From Apple Writer

When I began investigating text editors for my Apple II, I found that there was no single program that was ideal for my needs. My final choice was the *Apple Writer Text Editing System* marketed by Apple Computer, Inc. This system is simple to use, performs the most common word processing functions, and is relatively inexpensive.

Perhaps most important in my case, however, is the fact that *Apple Writer* is supplied on a disk that is not copy protected. This means that not only can backup copies easily be made, but the program can be modified to provide features not in the original program. Indeed, several articles have appeared in *Creative Computing* describing modifications to *Apple Writer*.

One feature not provided by *Apple Writer* is the ability to send special control characters to the printer or printer interface. My printer, an IDS 460 Paper Tiger, uses control characters to change the number of characters per inch and to change from normal to expanded type. This provides the ability to emphasize portions of the text such as headings.

Charles L. Hearn

Since I use this feature frequently, I decided to modify *Apple Writer* to send any ASCII character to the printer. This article describes how you can make this modification to your *Apple Writer*.

Apple Writer consists of two machine language programs: TEDITOR and PRINTER. The TEDITOR program allows entry and editing of text. The PRINTER program formats and prints the text; this is the program that must be modified to send printer control characters.

I began by disassembling the PRINTER program using the Apple disassembler (monitor L command). I was greatly assisted in understanding the operation of the program (at least the part that needed modification) by John E. Stith's excellent article in *Creative Computing* ("Lower-Case Display for Apple Writer," February 1981, page 124). The key to the modification is a JMP instruction at location \$0F59 in the PRINTER program.

Apple Writer uses special commands

embedded in the text to change the format of a page while it is being printed. A format command is signalled by an ! in the first column of a new line. The JMP instruction at \$0F59 branches to a routine which processes the formatting commands.

All that was necessary was to change this instruction to branch to a new routine located at the end of the original program. This new routine intercepts all text-embedded format commands. If the command is for printer control, it is deciphered and the proper ASCII character is output. If the command is not for printer control the program branches to the original processing routine.

The new text-embedded printer command has the form:

!as(number)

where (number) stands for the decimal ASCII code of the character that is to be output. Any ASCII character can be output. Normally, this feature would be used only to output single characters or character sequences that are intercepted by the printer interface or the printer. For example, to output a control-A, the command is

!as1

ABSOLUTELY RELENTLESS

The challenge of inner space — the fury of an enemy that seemingly will not die. This is SEA DRAGON — a battle to the death under the high seas! Slide into the Captain's chair, take the controls and prepare yourself for the most incredible non-stop action this side of Davy Jones' locker. SEA DRAGON puts you in control of a nuclear sub that's armed from stem to stern with enough firepower to take on King Neptune himself — and you'll need every missile, every torpedo, and every scrap of skill you can muster to survive.

The object of SEA DRAGON is to successfully navigate your sub through an underwater course past mountains and through labyrinthine passageways while avoiding clusters of explosive mines that rise from the seabottom. But the danger doesn't stop there — overhead, surface destroyers lace the water with depth charges; below, deadly attack bases and arcing lasers cut a killing swath that could reduce your sub to bubbling slag. But even these potentially lethal perils are dwarfed by the awesome menace that awaits you at the course's end.

SEA DRAGON — every possible "extra" is here to ensure your playing pleasure: exciting sounds, high score save, machine language graphics and an eye-popping scrolling seascape that extends the equivalent of over two dozen screens placed end-to-end, providing a diverse and unique challenge that will not diminish after repeated playings.

Nothing you've ever seen on your micro could possibly prepare you for this! You are ready now, ready for the ultimate in undersea action with a pace that is absolutely unyielding. SEA DRAGON — the arcade has finally come home.

FOR THE **APPLE** by John Anderson

"POWER FAILURE"

Goodbye valuable data. Unless you have a Guardian Angel uninterruptible power source on duty.

Guardian Angel switches to 150 watts of backup power in 1/100 of a second or less while alerting you of blackout or brownout conditions. Its rugged 12V battery gives you up to six minutes (15 at half-rated power), enough to save your data and shut down your system if line power does not return.

Guardian Angel is compatible with virtually every major microcomputer system, including Apple, IBM, H-P, TRS-80, Xerox, Eagle and Osborne. Its transient voltage suppressor also prevents system damage from power spikes.

Guardian Angel simply plugs in between your power source and your microcomputer. Its compact size permits either desktop use or out of the way placement.

Protect your investment: see your R.H. Electronics dealer today about Guardian Angel or contact us at 566 Irelan Street, Buellton, CA 93427, (805) 688-2047.

Guardian Angel, with LED power status indicator, automatically safeguards data from blackouts, brownouts for just \$595.*

This used to be the only way
to get a student
to practice math after school!

Motivation is the key.

Master Math is more than just a comprehensive software package for teaching grades 8-12 math. It's specifically designed to build and hold interest and enthusiasm so students can learn faster... retain more... and be proud and confident enough to show it.

Regardless of the student's starting level, Master Math will help develop math proficiency with:

- Easy to use operation.
- Success orientation.
- One-on-one instruction.
- Clear, concise concepts.
- High resolution color graphics.
- Imaginative games.
- Self-paced learning.
- High student interaction.

Master Math was developed by a professional math educator in the U.K. where it has been approved as a learning aide. Also, it has been tested in public and private schools in the U.S. It's received highly favorable

NOW...
There's MASTER MATH™

reviews in both countries.

Master Math runs on Apple II/+E, Commodore PET and CBM 8032. It's comprised of 6 independent discs or tapes with over 50 individual subjects. Coverage includes Algebra, Trigonometry, Geometry, Statistics and Basic Accounting. Teacher's support materials complete this valuable learning package.

To find out what motivation can mean to your math classes, fill out the coupon and mail it along with \$150 for your 10 day trial. Or you can order one for only \$30. But no matter which way you choose to review Master Math, if you are not thoroughly satisfied with its performance or results, return it to us for a full and cheerful refund. Telephone orders are gladly accepted. Call (207) 336-2500.

I'd like to put Master Math to work in my class.

!as78
```

Here 9 is the ASCII code for control-I, 56 is the code for 8, etc.

This command format is the same format used for the other *Apple Writer* text-embedded commands. As with the original commands, this new command must be preceded and followed by a RETURN, i.e., it must appear on a line by itself and must be the first characters on the line.

This means that you cannot change the character density in the middle of a line to emphasize a single word or phrase. In general this is not desirable, however, since changing the character density also changes the number of characters per inch. The resulting shift in margin locations is easy to compensate for in headings or individual paragraphs, but difficult when the change occurs in the middle of a line.

Listing 1 contains the modifications that must be made to PRINTER to include this feature. The modifications consist of changing the JMP instructions at \$0F59 to branch to the new routine, which begins at \$1865, and adding the new routine to the end of the program. Listing 2 is a disassembled listing of the new routine. The modifications are made as follows:

1. Use a copy program to make a copy of your *Apple Writer* disk. Do not modify the original disk! Make the modifications on the copy.
2. Boot a DOS master disk, and insert the *Apple Writer* copy in drive 1.
3. BLOAD PRINTER, then enter the monitor with CALL -151.
4. Enter the modifications as shown in Listing 1.
5. Enter \$0F59L. The first line of the listing should be JMP \$1865.
6. Enter \$1865LL and compare the listing with Listing 2.
7. If steps 5 and 6 don't check, go back to step 3.
8. UNLOCK PRINTER
9. BSAVE PRINTER,A2051,L4250
10. LOCK PRINTER

I have not attempted to decipher the entire PRINTER program and cannot guarantee that the portion of memory that contains this patch will never be overwritten, or that the routine will not

fail under some circumstances. However, I have been using it for some time and have had no problems. Let me emphasize again that the patches should be made to a copy and not to the original *Apple Writer* disk.

If you have made previous modifications to the PRINTER program, such as those necessary to display lowercase text using an adapter, you should be careful that the modifications do not use the same memory as those of Listing 2. This would require relocation of one of the routines.

I have installed a Videx Keyboard and Display Enhancer on my Apple; this allows both lowercase display on the monitor and use of the shift key for

upper- and lowercase. Videx supplies patches for *Apple Writer* for use with the Keyboard Enhancer. The routine presented here does not interfere with these patches.

There is one additional caution in installing this modification. *Apple Writer* does not store text in normal ASCII representation. At least one published *Apple Writer* modification, that of John E. Stith mentioned previously, converts the stored text to normal ASCII with the most significant bit set on. If you have installed Mr. Stith's modifications, you will need to change byte \$186A of my routine from \$C1 to \$E1 (ASCII for a) and byte \$1874 from \$D3 to \$F3 (ASCII for s).

Apple Writer on the Franklin Ace

Recently a computer called the Franklin Ace 1000 appeared on the market. It is intended to be both hardware and software compatible with the Apple II. It lacks the ability to do color graphics but, on the other hand, it is much better suited to word processing than the Apple. There are several features that contribute to this.

First, the keyboard is essentially that of a standard typewriter, with keys for all the special characters (including brackets and braces) in handy locations. Also there is a numeric keypad. But the best feature of the keyboard, in contrast to that of the Apple II, is that it has a fully functional shift key. Going along with this is the ability to generate both upper- and lowercase characters on the monitor. Lowercase adapters are not necessary.

Apple Writer is a very popular word processor for the Apple II, and it works just as well on the Franklin. But, as written, it makes no use of either the ability to generate lowercase characters, or the shift key, since neither are available on the Apple. Supplied with the Franklin are instructions on how to modify *Apple Writer* so that it can use both features. But, for reasons to be described in a moment, this is not the best solution to the problem.

Apple Writer was designed to work on

Melvin Fitting, Department of Mathematics and Computer Science, Herbert H. Lehman College, Bedford Park Blvd. West, Bronx, NY 10468.

Melvin Fitting

a machine that does not generate lowercase characters. Therefore, it displays normal capitals to represent lowercase, and inverse capitals to represent true capitals. Among other things, this means that you cannot embed control characters in an *Apple Writer* text, since the ASCII codes for them are in use as screen codes for inverse capitals. (See the chart of ASCII Screen Characters on page 15 of the Apple II Reference Manual.)

But there are good reasons for wanting to embed control characters in text—for instance, to send instructions to a printer. Several recent articles discuss this: "Printer Control Codes From Within Apple Writer" by J. Michael Riley, *Creative Computing*, June 1982, p. 142; and "Underlining for Apple Writer" by John E. Stith, *Creative Computing*, June 1982, pp. 146-152. It is also useful to have your text stored in standard ASCII if you are going to communicate with other computers.

The modifications to *Apple Writer* supplied with the Franklin Ace produce a version that makes use of the shift key and displays lowercase characters on the monitor, as promised. But, apparently in order to preserve compatibility with standard Apple software, the files thus created are the same as those created by the

original *Apple Writer*, i.e., not in ASCII, and with control character codes unavailable since they are still used to represent capitals.

In "Lowercase Display for Apple Writer" by John E. Stith, (*Creative Computing*, February 1981, pp. 124-129), a modification to *Apple Writer* is presented that allows it to make use of a Dan Paymar lowercase adapter on an Apple. But more than that, if the modification is made, the revised *Apple Writer* produces standard ASCII files, and thus the codes for control characters are free to be used for other purposes. Indeed, both of the articles mentioned above assume that this modification has already been made to *Apple Writer*.

Now, as it happens, it is simple to modify Stith's version further so that it will work on the Franklin. In fact, only one change is necessary. When done, you have a version of *Apple Writer* that will use the shift key feature of the Franklin, and produce standard ASCII files.

All that is necessary is to bypass that part of Stith's routine that converts ASCII codes for capitals to ASCII codes for lowercase unless ESC has been entered first (The *Apple Writer* solution to the shift key problem on the Apple is to use the ESC key instead). More precisely, one merely changes line 18D5 to RTS in Stith's routine, given in Figure 1 in his article.

Thus, finally, it comes down to this. To

NEW Beagle Bros Unlocked Utilities!

NEW! DOUBLE-TAKE ONLY 34.95

2-WAY-LIST/MULTIPLE UTILITY
BY MARK SIMONSEN

LISTS & CATALOGS SCROLL UP and DOWN, making file names & program lines much easier to access. Arrow-keys control scroll direction. NEW LIST FORMAT lists each program statement on new line—FAST program trace/de-bugging.

VARIABLE-DISPLAY shows all of a program's strings & variables with current values. CROSS-REFERENCE shows line nos. on which each variable/string appears. Better RENUMBER/APPEND lets you merge programs (not just end-to-end). Applesoft AUTO-LINE-NUMBER as you type. Instant Hex/Dec Converter, Program Stats, Cursor Eliminate/Redefine, Free Space-On-Disk...

(Includes Peeks/Pokes Chart)

Apple Mechanic's Hi-Res type routines are usable in your programs WITHOUT LICENSING FEE! Just give Beagle Bros credit on your disk and documentation.

NEW!

FLEX TEXT

ONLY 29.50

20/40/56/70-COLUMNS—NO HARDWARE!
BY MARK SIMONSEN

PRINT VARIABLE-WIDTH TEXT on the hi-res screens with normal Applesoft commands (including Htab 1-70). Normal, expanded & compressed text on same screen—no hardware!

ADD GRAPHICS TO TEXT or vice-versa. Run existing programs under Flex Text control. Easy to use and compatible with PLE® and GPLE®.

DOS TOOL KIT® FONT compatibility, or use Flex Text fonts. Select up to 9 fonts with ctrl-key commands. Print/List/Catalog in any style! Custom TEXT CHARACTER EDITOR included.

70-Columns requires Monitor, not TV; (Includes Peeks/Pokes)

BEAGLE BAG

ONLY 29.50

12-GAMES-PLUS ON ONE DISK
BY BERT KERSEY

COMPARE BEAGLE BAG with any one-game locked-up game disk on the market today. All 12 games are a blast, the price is right, the instructions are crystal clear, AND the disk is copyable. You can even change the programs or list them to LEARN, and see what makes them tick.

TWELVE GAMES from the Applesoft Ace, Bert Kersey—TextTrain, Slippery Digits, Wowzo, Buzzword, Magic Pack... A GREAT VARIETY of games that tap your Apple's flexibility. Excellent review in January 83 Softalk (page 148).

BEAGLE MENU TOO: See "Typefaces" disk. (Includes Peeks/Pokes Chart & Beagle Menu Utility)

FRAME-UP

ONLY 29.50

HIGH-SPEED DISPLAY UTILITY
BY TOM WEISHAAR

MAKE PROFESSIONAL PRESENTATIONS of existing hi-res, lo-res & text frames. FAST hi-res loads in 2 1/2-seconds! Paddle or Keyboard-advance frames. UNATTENDED SHOWS optional—each pic arranged & pre-programmed to display from 1 to 99 seconds. TEXTSCREEN EDITOR lets you create b/w text "slides". Add type "live" from keyboard during shows. Send copies of presentations-on-disk to your friends and associates.

(Includes Peeks/Pokes Chart)

NEW! ProntoDOS ONLY 29.50

HIGH-SPEED DISK UTILITY
BY TOM WEISHAAR

Put HIGH-SPEED DOS in your Apple's normal memory, Language Card or IIe high-memory—

Function	Normal	Pronto
BLOAD HI-RES IMAGE	10 sec.	3 sec.
LOAD 60-SECTOR PROGRAM	16 sec.	4 sec.
SAVE 60-SECTOR PROGRAM	24 sec.	9 sec.
BLOAD LANGUAGE CARD	13 sec.	4 sec.

(TEXT FILES: No Change)

BOOT PRONTO disk or your updated disks. Create new high-speed disks with normal INIT command. Compatible with ALL DOS COMMANDS and almost all of your programs.

LANGUAGE CARD or IIe high-memory can hold DOS—10,000 Extra-Bytes of program space!

MORE DISK SPACE: ProntoDOS frees up 15 extra-sectors per disk, almost one full track!

PLUS: Auto-Free-Disk-Space, New "TYPE" Command displays Text Files, and much more...

(Includes Peeks/Pokes Chart)

ALPHA PLOT

Apple Writer/Franklin Ace, continued...

get a version of Stith's *Apple Writer* suitable for the Franklin Ace 100 do this.

- Follow the instructions given in Stith's 1981 article for modifying *Apple Writer* but
- Before finishing step 6 of Stith's instructions (in his Figure 5) in which TEDITOR is modified, enter
18D5:60

That's all there is to it.

The modified *Apple Writer* will, of course, create files that are incompatible with the original *Apple Writer*, and conversely. So I conclude with two simple programs to convert between the two. The programs are written in Basic and are not fast. I have had only very occasional need for them. An assembly language version would be simple to produce if such conversions are needed frequently.

Both programs are used as follows. Make sure the program to convert to a particular version of *Apple Writer* is on the same disk as that version of *Apple Writer* (or at least, the TEDITOR for that version). Use *Apple Writer* to load the file to be converted. Exit *Apple Writer* and RUN the CONVERT program. When it finishes its work, it will reload *Apple Writer*, and you can then use it to save the converted file. □

Word Processing, Type Size, And The Line Printer VI

Scriptit is a curious devil. Radio Shack has several nifty printers capable of all sorts of graphic tricks, but you can't make them work from inside their own word processor. The problem has been attacked by the Acorn folks, among others, with augmentation packages like *SuperScript*.

Richard Wilkes has written a clever program that offers features such as underline and boldface. The problem is, I own a terrific printer, the Radio Shack Line Printer VI, and it won't do those things. It prints a whole array of graphics characters, but while these are handy in many Basic programs, they are rarely useful in word processing. Pitch and font changes are what I want.

Pitch controls the space between your lines and the font determines the size

Ted Byrne

and shape of the printed letters. The LP-VI is a real workhorse: it has an adjustable and detachable tractor feed, a friction drive (for single sheet printing), an out of paper alert, and the ability to accept paper from 2½" to 15" wide. It is a substantial, big time printer with many features, including a bi-directional printhead that I have clocked at over 100 cps and about 35 lines per minute. Its size dampens its noise and reduces vibration (especially compared to the din of a daisywheel).

Yes, I like the thing, and it has put in over a year of service with no problems save one: there have been many times when I have wanted to use its ability to

print different sized type and spacing but had to resign myself to the fact that *Scriptit* wouldn't let that happen. Then it occurred to me—after all that time—that I was wrong.

Let's back up a little. The LP-VI offers four different fonts (see Figure 1) and three different pitches (Figure 2). Yet *Scriptit* offers no commands to call up these different modes. What I had forgotten was that the printer can be locked into any combination of these pitches and fonts *before Scriptit is entered*.

The combinations are software directed, so I simply wrote a small start-up program that I enter before *Scriptit*. I then choose my graphic modes and call up *Scriptit* knowing that the printer commands will hold until cancelled.

The LP-VI is normally set at six lines per inch with 132 characters per line. But with this program I can now choose between normal, compressed, com-

CIRCLE 119 ON READER SERVICE CARD

NEW **S.C.I.M.M.A.R.'s**

T.A.C.—This is Tactical Armor Command by Ralph Bosson, Avalon Hill's Microcomputer Game of Armored Combat during World War II. You control individual tanks, anti-tank guns, and infantry squads in tactical combat situations. Official armor statistics are utilized. For one or two players featuring outstanding hi-resolution graphics, enhanced sound, and stimulating challenge. Five different scenarios are available from Meeting Engagement, Rear Guard, and Static Defense, to Breakout and Stalemate! The player(s) control up to eight vehicles, guns and squads simultaneously, utilizing the equipment of either the German, British, Russian or American forces. A microcomputer simulation for the most demanding gamers. For the Apple II computer systems with 48K and disk drive. Atari 800/1200, IBM P.C., and Commodore 64 versions available later this fall. \$40.00.

LEGIONNAIRE—Highly acclaimed real-time wargame simulation by Chris Crawford. You as Julius Caesar command up to ten legions against the barbarian infantry and cavalry during the days of the Roman Empire. The battlefield scrolls before you in full color and animation. Such a unique and pleasant departure from traditional wargames that *Video Games Player* magazine has awarded **LEGIONNAIRE** the 1983 "Golden Joystick Award"! Atari 4/8/1200 cassette (16K) \$35.00, diskette (32K) \$40.00, joystick required.

TELEGARD—Another not so mighty adventurer bites the dust! Hailed in the February 1983 issue of *Playboy*, "TELEGARD is one of the most powerful examples of the challenging diversions your computer can offer these days." **Telegard** is a 50-level dungeon exploration game featuring sprite graphics and sound for your Commodore 64. The monsters and creatures in the **Telegard** dungeon will not wait for you to react, so quick wits and reflexes are needed! Will you return from the cruel labyrinth to tell tales of horror, despair, great treasure and magic? Or will you be another of the foolish ones, only to perish in the dark depths? Commodore 64, TRS-80 Mods. I/III (32K), Atari 800/1200 (48K) cassette \$23.00, Apple II (48K), Atari 800/1200 (48K), TRS-80 Mods. I/III (48K) diskette \$28.00 each.

NOBODY EVER PLAYS JUST ONE HAND OF STRIP POKER.

There's no such thing as a quick game of *Strip Poker*. With two captivating female opponents, this fast-paced program features graphics and game play so realistic that players tend to lose track of time. Decorum forbids that we actually show you what happens on the screen. Suffice it to say that our sophisticated software gives you ample incentive to stretch your poker skills to the limit!

Just to sweeten the pot, we've added two new data disks . . . one with two new female opponents, the other with two males. The action is intense and the stakes are high.

If you have a keen competitive instinct and don't mind occasionally losing your shirt, see your local computer store or call us for *Strip Poker* today.

Atari (40K) and Apple II (48K) computers, \$34.95 Diskette. Additional Data Disks (specify male or female) \$24.95 ea.

Look for these and other Artworx programs at your local computer store. For a free catalog, write or call 800-828-6573. Artworx Software Co., Inc., 150 North Main St., Fairport, NY 14450 (716) 425-2833

Line Printer VI, continued...

pressed/elongated or full elongated modes... printed at 6, 8, or 12 lines per inch. My basic listings are no longer impossible to see without my glasses, and when I give speeches and talks, the elongated mode really beefs up the notes for my aging eyes.

Another advantage of modifying font and spacing is the ability to pack data onto fewer pages. This article runs about two and a half double-spaced pages of normal typing, yet it fits handily onto about two thirds of a page, still double-spaced, in condensed form at 12 LPI.

I would still like to have a *Scriptit* modification which fully supports these controls from inside the program, but it is such a terrific word processing system and so darned inexpensive that I can't complain now that I have this little utility program. □

Mr. Epson, Meet Mr. Pascal

The first topic for discussion between Mr. Pascal and Mr. Epson is the Pascal technique for routing the output to the printer. One way is illustrated in the program listing of PrintTest shown in Listing 1. This illustration is not intended to be an example of good programming practice, but is intended rather to be an "unretouched" record of an original Pascal program that prints examples of the various Epson operating modes.

This program was developed and executed on an Apple II+ (64K) with a language card, Videx Videoterm 80-column board, and Paymar chip. Apple UCSD Pascal 1.1 was the programming language. The printer is an Epson MX-80 F/T.

The technique used here is to declare a variable called OUTFILE to be of type TEXT and then associate that variable with the system file named PRINTER:. This is shown in the REWRITE statement at the beginning of the procedure FIRST. The WRITELN statements which are intended for the printer must have OUTFILE as the first parameter. Output statements intended for the screen do not use a special parameter in the WRITELN statement. The output statement at the end of the main program (near the end of the listing) illustrates this operation.

Carlton P. Russell, Jr.

The program was written by first attempting an operating mode and then switching that mode off to be sure that the printer would come back to the normal mode each time. The program structure was intended to be a simple linear list of output statements; however, the size limitations of procedures caused the primary procedure to be broken into two procedures FIRST and REST.

Since OUTFILE was declared in the main program, it is a global variable which can be used in any of the procedures. The function CHR is used within the WRITELN statements to convert the integer codes to the ASCII form needed for transmission to the printer. A similar process involving the CHR\$ function is used in the Epson manuals for illustrating the use of the printer command codes in the basic language.

The printed output resulting from the execution of this program is shown in Figure 1. The title is produced using the double width, double strike, enhanced combination. This combination is then explicitly turned off. Note in the listing that the title has six double width spaces before the title words to center the title.

A printout using the normal default operating mode is produced following each of the experiments. The regular

double width technique is tried next. Then the normal size, enhanced print example is shown. Examples of the various sizes and print techniques are shown along with the codes which turn them on and off. While this demonstration output provides the codes necessary for using the various options of the Epson, it does seem to suffer from a lack of organization.

The second topic for Mr. Epson to share with Mr. Pascal, Mrs. Basic, and Miss *Executive Secretary* concerns a way to organize and keep track of the various printer control codes. While generating the program listing and the demonstration output from the PrintTest, a way to organize the operating modes into a table based on the character sizes and the printing techniques was developed. The results are shown in Figure 2.

The left side of the table shown in Figure 2 lists the four character sizes starting with the small compressed characters which allow 132 characters in an 8" line. The normal size characters which are printed 80 per line are listed next. The third row lists the oversize characters which are printed 66 to the line. The last row lists the large double width characters which are printed 40 characters per 8" line.

The column headings across the top of the page show the four printing techniques starting with the normal single strike mode and generally increasing in print density (boldness) as one moves to

Carlton P. Russell, Jr., 405 Westburg Ave. SW, Huntsville, AL 35801.

You CAN Speak BASIC

eliminate the mystique of computers...

Machine-Specific for Apple™, Atari®, PET™, TRS-80™, and VIC™

The popular and best-selling I Speak BASIC series is now available for VIC and Atari microcomputers. The series details the basic components and operations of your specific machine. All programming examples and commands are written in BASIC in a specific version for your computer.

Everything Needed for an Introductory Course

- 15-session course includes:
 - Student Text: begins each lesson with learning objectives followed by definitions of key terms, programming examples, in-class exercises, assignments, a summary, and practices.
 - Teacher's Manual: contains special annotations and suggestions to aid in lesson planning and teaching methods. Includes answers to all quizzes and practices.
 - Classroom Sets and Exam Sets are also available. Please request additional information on your school letterhead.

No Previous Experience Required

- Students (and teachers) learn BASIC programming and get complete understanding of computer operations and functions.
- Introduces the basic parts of a computer through easy-to-understand diagrams.
- Teaches the hows and whys of programming, defining key terms and BASIC concepts.
- Teaches students how to write, run, even modify programs.
- Details common problems and solutions.
- Includes a lesson on the video-display graphics of each micro.

Also available...

Introduction to TI BASIC

(Inman, Zamora, Albrecht) This comprehensive work teaches you BASIC for use with the Texas Instrument Home Computer. Covers all essential programming and machine features.

the right in the table. The second column lists the double strike (two-pass) mode.

The third column lists the enhanced mode in which the printhead is moved slightly and the character is printed again as the printhead moves across the

page. The last column lists the technique in which the enhanced mode is used twice (double strike) to produce an unusually bold image.

Note that four sizes time four styles sounds a great deal like 16 modes; however, literature says that the Epson has

12 variations. Sure enough, the manuals are clear that the compressed size options and the enhanced print style are not to be used together. The four sections in the table which are marked with dashes are the four modes which involve these excluded combinations. The nor-

CHART A NEW COURSE WITH SAMS.

Get your hands on these Sams Books and get the know-how you need to further your career in computer programming. Sams Books not only help you program today's popular computers, but also help you control tomorrow's robots.

Find out about UNIX™ with Sams UNIX PRIMER PLUS, written by computer-expert Mitchell Waite. It's the only clearly-written, fully-illustrated introduction to the powerful UNIX operating system currently used for personal-size and large computers. Excellent for self-study. No. 22028, \$19.95.

Let Sams lead you through the innerworkings of CP/M® with another new Sams/Waite book, SOUL OF CP/M: HOW TO USE THE HIDDEN POWER OF YOUR CP/M SYSTEM. Learn how to modify BIOS, use CP/M system calls in your own programs, and more. No. 22030, \$14.95.

Become an expert on the IBM® PC with 8088 ASSEMBLER LANGUAGE PROGRAMMING: THE IBM PC. It tells you everything you need to know about the 8088 microprocessor—how it works and how you can use it for assembler-language programming. No. 22024, \$15.95.

Continue your study of popular computers with INTERMEDIATE-LEVEL APPLE II® HANDBOOK. This hands-on guide explores the entire internal firmware of the Apple II as it shows you how to use its 6502 microprocessor for machine- and assembler-language programming. No. 21889, \$16.95.

COMMODORE 64™ PROGRAMMER'S REFERENCE GUIDE is packed with professional tips and special information to help you get the most from your Commodore 64. It includes a complete, detailed dictionary of Commodore BASIC commands, statements and functions with examples showing how each item works. No. 22056, \$19.95.

Explore the growing field of robotics with MICROPROCESSOR-BASED ROBOTICS. It's a fascinating introduction to the theory, design and construction of robotics covering everything from the mechanics to computer control. It even shows you how you can operate a robot system with a personal computer. No. 22050, \$19.95.

Let Sams help you move your career in a new direction. To order or to get the name of your local Sams retailer, call 800-428-3696 or 317-298-5566 and ask for Operator 350.

END.
```

the double width options but may leave on any density modes. Some direct transitions from one special mode to another without going through "normal" have been successful; however, all 132 transitions have not been demonstrated here.

The numbers in the sections of the table are the ASCII codes representing the characters which are used to control the Epson printer. For example, 27 is the code for escape and 69 is the code for the letter E. The sequence of an escape followed by an E turns on the enhanced mode for normal size characters (second row, next to righthand column of Figure 2).

An example of the use of the codes in the table is shown in Listing 2. Suppose you wanted to initialize the printer for the normal size, enhanced, double strike mode prior to running a Pascal program. You decided not to modify the program itself. One way to do this is shown in the program ENHANDUB in Listing 2.

**Mr. Epson and Mr.
Pascal are expected
to be cooperative
coworkers for a
long time to come.**

This program executes to send the four codes, 27, 71, 27, and 69, to the printer and initialize it for later printing. As long as the power is applied to the printer and other control codes are not transmitted, it will print in the normal size, enhanced, double strike mode.

Note that the table shown in Figure 2 is a useful reference for Applesoft Basic and perhaps other Basics using the CHR\$ function as well as for Pascal using the CHR function. The *Executive Secretary* word processing system (Sof/Sys, Inc., 4306 Upton Ave. S., Minneapolis, MN 55410) provides for a straightforward way to use these same codes to control the printer from within the text of a document.

All 12 of the modes in Figure 2 are demonstrated in the PrintTest listing and the sample output is shown in Listing 1 and Figure 1. After each mode is turned on, the codes which return the operations to normal are also exercised.

Mr. Epson and Mr. Pascal have met and they have talked in a variety of pleasing ways. They are expected to be cooperative coworkers for a long time to come. □

Manuscripts and Letters Made Easy With Easy Writer

Everyone agrees that *Easy Writer* has problems. It will not underline text. Alignment protection does not always work and has some little quirks you have to learn to live with. But for writing business letters, reports, and manuscripts, the program is adequate. And there are easy ways of making it work even better with the Epson printer; you can even print on single sheets. This is true even when the program, the system, and the printer are in the hands of a creative writer/journalist/public relations person with no training in computer operations or programming.

I speak from my own experience. I had more trouble with the Epson printer manual than I did with the *Easy Writer* instructions. So I come not to slay *Easy Writer* or Epson, but to help you by sharing some basic procedures.

The purpose of all which has been said to this point is not to be cute. It is to suggest that there are many computer users like myself who are basically writers looking for a better way of producing their documents. We are intrigued and fascinated with word processing but find computer manuals filled with a strange gobbledygook that frustrates our creative production. So what is to be presented here is a simple instruction book on how to use *Easy Writer*, the IBM Personal Computer, and the Epson MX-80F/T to produce quality letters, manuscripts, addressed envelopes (not labels), and other business documents on single sheets and on your own stationery without purchasing any additional equipment.

There is good reason for making *Easy Writer* work. First, you may have half of a novel and six short stories already on *Easy Writer* disks. If you have to retype all of this to use a new word processing program, you have lost a great deal of valuable creative production time. Alternatively, you could develop your own

H.L. Sisson

software program to read *Easy Writer* disks and transfer the information to the new word processing program. While you may be curious and intrigued about programming, if you are indeed a creative rather than a program writer, you probably want to get on with your creative effort.

Single Sheet Printing

First, the Epson printer must be programmed for single sheet printing. The IBM, Epson, and *Easy Writer* manuals are equally vague on this. The process involves two imbedded commands. The first is Ctrl-0, Esc-8. If you do not do this, your printer stops printing two inches from the bottom of the page and begins its obnoxious "feed me" buzzer sound.

The second imbedded command is .FORMSTOP which stops the printer at the end of each page giving you time to insert a new sheet. The computer devotee will tell you such operations are slow and old-fashioned, and you should use fanfold paper. Try this method first.

Another difficulty you will encounter is that some *Easy Writer* embedded commands for margin, spacing, and type selection cause the platen to advance a line, fouling up spacing on your document. This can be overcome by using a separate header file.

Then there are the problems with the starting point for fanfold forms versus the starting point for single sheets. You want the sheet to be under the rollers on the platen. But if you start with the paper under the rollers, it prints off the bottom of the page. All of this is enough to discourage you from making the next payment on the system.

So let's assume you want to write several very important business letters with one inch margins top and bottom and on each side of 8 1/2 by 11 bond paper.

Formatting Letters

First, create an embedded commands header which will include:

```
>.FORMSTOP  
>.CTRL O, ESC E  
>.CTRL O, ESC G,  
>.CTRL O, ESC 8  
>.PAGELINES59  
>.LINES53  
>.MARGIN8  
>.TOP0  
>.SPACE0
```

Then SAVE this header, and name it LTR FM HD (Letter Form Heder). Remember that each of these lines must be followed by a paragraph marker (RETURN).

Now, put an old sheet of paper in the printer. From the editor, press F-2, and this header will spit out the piece of paper you have just put in with no printing on it and program the Epson printer for the letters you want to write.

Next go to your *Easy Writer* File System (F-10) and Protect (P) your LTR FM HD file.

Clear your text, and you are ready to begin your letter. You do not need to embed any additional commands.

Be sure to SAVE this file, revise frequently, and set your margins in additional commands (F-4) at 0,62,5. This accomplishes your goal of a one inch margin left, right, top and bottom.

If your letter is a one page document, and if your business stationery has a logo at the top which requires starting lower on the page, your own LTR FM HD will vary in both the TOP and LINES commands. There are six lines to the inch, so if you want to start printing 1.5 inches from the top rather than one, change these commands (for a one page letter) to .TOP3 and .LINES49.

If your stationery requires starting

**YOU
CAN MAKE
A FORTUNE
IN MICROS!**

THE MICRO COMPUTER BUSINESS WILL GROW FROM \$10 TO \$100 BILLION IN THE NEXT EIGHT YEARS! ARE YOU READY TO CASH IN?

The micro computer business is predicted to grow from its present \$10 billion to \$100 billion before 1990! Imagine the possibilities this opens for you! No matter where you live, if you're starting up or presently in business, **no other industry offers you more opportunities!**

Now, finally, all the inside information you need to secure a prosperous future in this dynamic industry is available in **one place - THE COMPUTER ENTREPRENEUR MANUAL!** - An immense information source, compiled by our inquisitive research team, aided by a panel of **experts and business people from all areas of the computer industry!**

We present the inside story of **more than 100 lucrative computer businesses you can enter**, where you'll find the **real opportunities** for the eighties: from one man operations like **Programming Author, Word Processing Center or Consulting**, to **Systems House, Service Bureau, Computer Store etc!** Many at little or no investment! All the invaluable facts and figures: **How to start, Capital needs, Profit estimates and Margins, How to Sell and Market, How missing technical or business experience need not stand in your way, Source of Suppliers, etc!** Details that could take **years** to find out on your own!

We'll show you **inside tricks**, like how to **never again pay retail** for computer products and consumer electronics, **even for one item - right now**, while you're starting your business! How to get **free merchandise** and trade show **invitations, etc.** This alone will **more than pay for the manual!** You'll read **actual case histories** of other computer entrepreneurs, so you can **learn from their mistakes, and profit from their success stories!** Where you'll be **one year from now depends on your actions today!** Let us **show you how to take the first crucial steps!**

Order now and take **advantage of our limited introduction special, THE COMPUTER ENTREPRENEUR MANUAL**, and a **six month subscription to THE COMPUTER ENTREPRENEUR REPORT/NEWSLETTER** (so you're **always up-to-date** with the industry), **both for only \$29.95!** You must be convinced on how easy you can **strike it rich** in the micro computer business - or you may **return the manual for a full refund within thirty days!** **USE OUR TOLL FREE NUMBER TO ORDER!**

EVERYTHING YOU NEED TO KNOW TO SUCCEED IN THE COMPUTER BUSINESS IS ALL IN THIS MANUAL!

THE COMPUTER ENTREPRENEUR MANUAL has the **answers to all your questions** about selecting, starting and **successfully running a computer business!** There has **never been such a comprehensive collection of know-how and information** about this business in **one place!** All the facts you need to plan and achieve your goals in **easy-to-follow, step-by-step instructions!**

These are some of the **100-plus businesses** covered in **PART ONE** of the manual, with the facts on **How to start and run, Start-up Cost** (Even how to operate on a shoestring), **What profits to expect, Wholesale prices, Mark-ups, Suppliers, future outlook, case histories** for each, etc:

Systems House, Software Author (who to sell to and who to avoid), **Service Bureau, Software Publisher** (How to find programs that sell, **Word Processing Service, Consulting and Consultant Broker** (use your skills or those of others, **make \$150 - \$1000 a day!**), **The incredible Games Business, Computer Store** (Franchises: Pro and Contra, or a low inventory store in your home!), **OEM, Hardware Mfg, Data base and Teletext Service** (big prospects!), **Used Computers, Repairs, Rent-A-Computer, Promote Fests and Trade Shows, Turnkey Systems,**

Bartering, Mail Order, Compile and rent mailing lists, Specialized Data Headhunting and Temp Help Service, Tech Writer Shop, Custom Engineering, The highly profitable Seminars and Training Business, and many more!

Many **new ideas and ground floor opportunities!** Interviews and **success stories** on companies of all sizes! **Privy info on the profits made:** How some computer store operators **net \$100 - \$250,000!** Little known outfits that made their owners **millionaires**, one of these low-key companies, making simple boards, went from **nil to \$20,000,000 and 100 employees in four years!** Programmers that make **\$300,000, Thousands of micro millionaires** in the making, etc!

Whatever your goal is - **Silicon Valley Tycoon**, or just a **business at home** - we **guarantee** you'll find a **business to suit you - or your money back!** **PART TWO** of the manual is loaded with the **know-how and "streetfighting" savvy** you need, both as a **novice or business veteran**, to get started, to stay and to **prosper** in the micro computer business! A **goldmine of information** in clear and easy-to-use instructions: **How to prepare your Business Plan, Outside financing, The mistakes you must avoid, How to hire and manage employees, Incorporation** (when, and how to do it **cheaply**), **Surviving bad times, Record Keeping, how to estimate your market before you start, Use multiple locations to maximize profits, how to promote and stay steps ahead of the competition!** How to get **free advertising, free merchandise, free advice, Power negotiating** with suppliers to **double your profit margins, etc!** Even how to **keep a present job while starting a business part time!**

Don't miss this opportunity to be part of this **great industry - the next success story** could be **your own!** Order the manual **today!** Part one and two, bound in a **deluxe ring binder**, where you can also collect our **newsletter** (free for six months with the manual - a **\$32.50 value!**) - all for only **\$29.95!**

THE COMPUTER ENTREPRENEUR NEWSLETTER - ALL THE LATEST INSIDE BUSINESS NEWS! NOW! SIX MONTHS FREE WITH YOUR MANUAL!

You're **always attuned to the industry**, and your manual kept **up-to-date**, with our **newsletter!** Each issue has the **latest business news, ideas, new suppliers**, our indispensable **"watchdog" column on profits, discounts** (don't miss **mfg's** promos, like recently, when top video monitor sold at **\$80 - that's half wholesale, one third of the retail price!**), **the competition, the big deals, etc!** Feature stories with **start-up info and case histories** on new micro businesses!

You'll get **invitations** to trade shows and conventions, the **usage of our advisory service** and our **discount buying service** for your purchases!

You'll find **many items** in our newsletter that will **save you the cost of your manual many times over!**

P.O. Box 427 • Lafayette, Oregon 97217

Easy Writer, continued...

more than one inch down from the top, and if your letter is more than one page and you want the one inch margin top and bottom on the second page, you must make compensations in your text file rather than in your LTR FM HD file. At the start of your text, repeat one of the embedded commands from the LTR FM HD file, such as TOP0. Then use your F-3, insert a line, command to move your text down the screen the necessary number of lines. This affects only the first page of your letter.

When you have completed your text composition and have pressed F-10, gone into your file system, and done the last R (revise), and P (protect), then G (get) your LTR FM, HD file. While you are still in the file system, print your LTR FM HD file (H) making sure the printer is on and ready. This is a double check to make certain your printer is programmed.

While still in the file system get (G) the text file you have just created.

Put your stationery into the printer. The LTR FM HD you have created requires that the top of the paper be even with the top of the horizontal metal plate above the platen.

While in the file system, print (H) your text file.

Addressing Envelopes

Now you must address the envelope. That's easy. You use the program listed above, except that you change the numbers on three lines. Change the MARGIN to 30, PAGELINES to 15, and LINES to 5.

If you address envelopes frequently, you will want to save this program, which I call ENV FM HD (Envelope Form Header).

You can also use the program for mailing lists and to print the addresses from your mailing list directly onto the envelopes so they appear to be individually addressed.

First, create a file for your mailing list. All the names can go into one file, but be sure to use only four lines per address.

Use F-3 (insert line) to put a space between each address. This separates them for your eye on the screen as well as for the printer program (ENV FM HD).

Print your ENV FM HD file.

Call up your mailing list file.

Insert the first envelope. Position the head of the printer on the envelope where you want the address to start.

Print your mailing list.

Manuscripts

Writers' Market has a section on how you should type a manuscript. It is simple enough, just print your name, address, and telephone number in the upper lefthand corner of the first page,

June 1983 © Creative Computing

single-spaced, and the number of words in your manuscript and the rights you are requesting on your article or story in the upper righthand corner. Your name should also appear on each following page along with the page number. Your title, byline, and story should start half way down the first page. Can you do this with *Easy Writer* and Epson? Certainly! Just follow these steps:

Your embedded commands file is the same as our LTR FM HD file with one exception. Delete the space command.

In your manuscript file, you will want to embed four commands intermixed with your text as follows:

- SPACE0
- TITLEA, 1, (your name), Page
- PAGE1, nn. (nn is determined by the number of spaces in your name plus the number of spaces for the comma and "page" and the space following page.)
- Then type in your address and the number of words in your article on the first line, the city and state and zip and the rights requested on the second line, and your phone number on the third line.

• Following your phone number, enter the fourth embedded command: SPACE1.

• Type in the title of your story, and insert eight lines between the fourth embedded command and your title.

That done, go to your file system (F-10) and save this start of your text. Once you have finished your text, revised and protected it, proceed to the next step.

Go to F-4 and into page settings (P) and check your spacing for the first two pages. Watch particularly the spacing of the title/page line. One quirk of *Easy Writer* causes the title line to be indented if the last line on the previous page is an indented line.

If the title line is single-spaced right above the start of your text, you can add one line (F-3) above your SPACE1 command at the start of your text. Return to the editor and revise as needed.

Proceed with your text composition and printing as for the letter described above.

And there you have it. However, as I read back over this, there are some observations I should make. First, six months ago I would not have been able to write this, and I can see gobbledygook creeping into it with talk of embedded commands, files, and formstops. I apologize if I have confused you.

Second, I must confess that a good deal of what I have learned has not come because of any great intelligence. A good deal of it has come by accident, trial and error, and patience. And finally, each little thing you learn may open doors to new computer possibilities for you. I hope I have done this for you. ☐

Learn Successful Computerized Investing To Make Money In Any Stock Market & Gain Financial Freedom

If you want to increase your personal wealth while beating any stock market in the world at its own game, then the Wall Street TAP System with its outstanding programs merit your immediate and serious attention.

Stockline and Stock Stalker are finally available to help you build lifelong financial independence for yourself by unlocking the basic secrets of how to succeed in any American, Canadian or international stock market. Now, more and more market professionals who use technical analysis, are switching to this kind of software.

These two superior packages systematically compute stock and market data into graphic charts, displays and printouts that allow you to quickly evaluate

the quality, value and trend of any target stock moving in any market.

Both Stockline and Stock Stalker use the same reliable and proven appraisal techniques perfected by seasoned stock market specialists to pick their stocks. Offering unparalleled value-per-dollar features and simplicity of operation, they are designed exclusively for the home computer owner who seeks new, exciting ways to employ his hardware.

Easy to use, each program is self-documented, menu-driven, help desk supported, user-friendly, self-prompting with error trapping entry and batch updating. The accompanying operations manual is extensive, understandable and

comes complete with hardcopy samples.

Configuration: Apple II with Applesoft ROM or Apple II Plus. TRS-80 Model I or III 48K. 1 disk drive.

Valuable Bonus Extra With Stockline & Stock Stalker Orders! When you order Stockline or Stock Stalker you'll receive, FREE, a 6-month subscription to **Computer Investing News**. It's the up-to-the-minute newsletter that opens vaults of information on how to maximize your gains through computerized technical analysis investment software. **Think Software Inc.**, 572-810 West Broadway, Vancouver, B.C. LetterWrite

James Byron

LetterWrite is a program designed to be used on an Apple II Pascal system in conjunction with an Integral Data Systems 440-G printer. With it you can make as many copies of a text file as you want. The program accepts control characters from the text to change from normal to enhanced mode or to change the character density. The program will work with any printer if the CONTROLCHECK procedure is omitted and I suspect that it will work as is with any IDS printer.

To use the program, simply enter your text file into the Pascal text editor. If you wish, you may format your text using the up arrow key to send control characters to the printer. Although this precludes the insertion of the up arrow character in your text, you may do any of the following:

1. Print in normal mode
2. Print in enhanced mode
3. Print at 8.3 characters per inch
4. Print at 10 characters per inch
5. Print at 12 characters per inch
6. Print at 16.5 characters per inch

By using the Set Environment command of the text editor to set Auto Indent to false and Filling to true, you can use the text editor to write all your letters. Once they are saved on disk, the copy program will give you as many copies as you desire. Happy word processing! ☐

James Byron, 529 N. East St., Raleigh, NC 27604.

GUIDE TO VIC-20[®] PROGRAMMING

If you've purchased a VIC-20 recently, you probably know all about playing its great games. But if you're now ready to learn about computer programming, it's time you discovered *Getting Acquainted With Your VIC-20*.

This newly revised book is a step-by-step guide to programming your VIC. Starting with the functions and commands of the BASIC language, it quickly teaches you how to write and adapt programs on your own. And then it shows you how to write programs to take full advantage of your computer's outstanding color, sound and music capabilities!

Even if you've never touched a computer before, the easy "learn by doing" techniques—coupled with the more than 60 programs in the book—will make you an expert VIC programmer in no time.

For parents and educators, there's a section on "VIC as Teacher" that can help you use your computer as a powerful children's learning aid in the classroom or at home.

Get the most from your new VIC-20. Order your copy of *Getting Acquainted With Your VIC-20* today!

5½" x 8½", softcover.

Over 60 full program listings.

VIC is a registered trademark of Commodore Business Machines.

A Peek Through The Magic Window

Cary D. Corbin

When you are trying to convince your spouse to let you buy a home computer, anything that will display its usefulness in his or her terms is a great help. The programs that finally sold my wife on the system were the word processors. She is a professional secretary and was quick to grasp the beauty of a word processing system.

Before retiring from a full time paying job to raise our kids, she had an IBM electronic typewriter with a heart of pure silicon. This machine had the rudiments of a word processor, but was limited in its functions. Then her employer installed a full-blown Xerox word processor. While I was forced to admit that an Apple-based system would never match the utility of that \$20,000 system, I could honestly point out that it fell somewhere between her electronic IBM and the Xerox, for about the same money as the IBM.

I began sharing *Creative's* reviews of Apple-based word processors with her, her enthusiasm grew, she got several book manuscripts to type... We now own an Apple system complete with Epson printer and *Magic Window* word processor.

The *Magic Window* system is one of the neatest low cost word crunchers for the Apple. Its features are too numerous to discuss here, but for those who are interested *Creative Computing* did a review in the 1982 Software Buyer's Guide issue. In fact, it was that review that sold us on the system.

I differ with that review in only one respect: a fast typist *can* overtype the program and lose a letter as the line wraps around. My wife types close to 85

wpm average and on short, common words like *and* and *the* her speed approaches that of light. When one of these words comes at the end of a line, it frequently loses something in the wrap-around. The only other complaint she has about the system is that she can

By eliminating DOS and the Hello program, an extra 34 sectors or so are freed for data storage.

never remember the steps to initialize a data disk to store her files. Hence, the following solution.

These two programs and EXEC file will automatically initialize a *Magic Window* data disk, transfer the SYS.OPTIONS file, and scratch the DOS image and Hello program. By

Listing 1. Lomem Reset.

```
99 REM
100 REM LOMEM RESET
101 REM
110 REM RESET MEMORY POINTERS TO MOVE PROGRAM AWAY
111 REM FROM THE SYS.OPTIONS FILE
112 REM
120 POKE 104,64: POKE 103,1: POKE 16384,0
130 NEW
139 REM
140 REM COURTESY OF APPLE CART
141 REM DEC, 1981
```

eliminating DOS and the Hello program, an extra 34 sectors or so are freed for data storage.

Entering this set of programs is quite simple.

Type in the program Lomem Reset and save it on a *Magic Window* data disk. (If you don't want to keep them on a data disk, use the FID program on the Apple System Master disk to transfer the SYS.OPTIONS file from a *Magic Window* data disk.)

Type in the program Magic Initialize and save it on the same disk as Lomem Reset.

Use the Make Text program on the Apple System Master disk to create a text file called MAGIC. Instructions for using the Make Text program are given in the Apple DOS manual, pp. 61-64. This file should contain these instructions:

```
RUN LOMEM RESET
BLOAD SYS.OPTIONS
RUN MAGIC INITIALIZE
```

This file is then saved on the same disk as the Lomem Reset, Magic Initialize, and SYS.OPTIONS files.

Your automatic initializer is now ready to use. Fire up Applesoft, insert the disk with these programs on it, type: EXEC MAGIC

Magic Window, continued...

Press RETURN and follow the prompts given in the program.

Remember the following cautions: Both DOS and the memory pointers are altered. If your typing errors cause the program to crash and you don't get the

NORMAL EXIT message, the alterations have *not* been repaired. If this happens, you can reboot DOS with the System Master disk. There are less drastic ways, but they are beyond the scope of this article. □

TIMEX **sinclair 1000**

The magazine for Sinclair and Timex Sinclair users

SYNC

Math and Science:

- Least Squares Analysis

Programming:

- Alternative Display
- Storing Words

Space Warp

Graphics Game

FOR SINCLAIR AND TIMEX SINCLAIR OWNERS ONLY

If you own a Timex Sinclair, a ZX81, or any other Sinclair computer, you've probably discovered that the big microcomputer magazines cover only the bigger computers. Where can you find helpful articles on the Sinclair? In *Sync*!

Sync is the one magazine that's written exclusively about Clive Sinclair's marvelous inventions, the Sinclair computers. And it's the one magazine to read if you want to get more from your Sinclair.

You'll find program listings for games, helpful programming techniques, hardware upgrades, math and science programs, news of new products for the Sinclair—in short, everything you need to use and enjoy your Sinclair to the fullest.

In just two recent issues, for example, we covered:

- ☐ Putting a Reverse Character in a String
- ☐ How to Double Your Memory
- ☐ Least Squares Data Analysis With the ZX80/81
- ☐ Space Warp: A Graphics Space Game
- ☐ How to Reduce "Blank Screen Time"

- ☐ Storing Three-Letter Words in an Array
- ☐ Software Review: ZX Galaxians
- ☐ An Introduction to Expression Evaluation
- ☐ Short Programs Just for Fun
- ☐ The ZX81 Parser and User-Defined Commands
- ☐ Understanding Floating Point Arithmetic
- ☐ Handling Strings from Another Dimension
- ☐ Book Review: Understanding Your ZX81 ROM
- ☐ How to Add a Keyboard to Your Sinclair
- ☐ Translating Other Basics: DEF on the ZX81
- ☐ Six Outer Space Games—With Program Listings
- ☐ Hardware Review: Sinclair ZX Spectrum High Resolution Color/Sound Computer

If you own a Sinclair microcomputer, *Sync* is the only computer magazine you really need. Subscribe now to *Sync*, and you can save up to 33%! Just complete and return the postage-paid reply card or the coupon at right.

A Poor Man's Spelling Verify Program

Some people think that a spelling verify feature in word processing is an unnecessary luxury. These are people who seem instinctively to know how every word in the English language is spelled. But for thick skulls like me, a proofreading aid is essential. Unfortunately, thick skulls like me don't always have an understanding spouse—after spending all that money on a letter quality printer, what's left over had better go for groceries.

The solution? Simple. I have Extended Disk Basic on my Micromation computer. Why not write my own? My confidence in my ability to write my own is augmented by the fact that I was on a team that wrote a spelling verify feature for a mini-computer manufacturer. Based on my experience there, I had a good mental picture of what an interactive spelling verifier should look like. Here are the essentials:

Dictionary

The dictionary is the most important part of a spelling verifier, so don't be surprised if most of this article is on this subject.

It need not contain all the words in the English language, just the words in the user's vocabulary. As such, it must

Charles D. Arceneaux

start out small and be able to grow as it is used. It must include all forms of the words in it—forbid, forbidden, forbidding, forbade, and, of course, forbids. Funk and Wagnalls also includes "forbidal" which is not in my vocabulary, so it should not be included in my dictionary.

The dictionary is the most important part of a spelling verifier.

Some dictionaries list each form separately, others contain coded instructions that allow reconstruction of each form. There are obviously advantages to each scheme. The method to be used must be worked out in the design phase of the project, and the decision should be made based on the access methods that are available.

A format that allows all forms of a word in the same entry goes like this:
forbid,,den,ding,s;

The words must only be reconstituted if there is a match in the first part of the word. I have seen this scheme used on a system that had only one file type, that is a page-oriented serial or document file. The verification was done on an entire page of text at a time. The page was held in memory and accessed randomly while the dictionary was read through serially.

Since it skipped around the page while checking words, the program waited until the whole page had been checked before feeding back to the user the words that were wrong. I thought this program was awkward to use, but since it was one of the first verify programs on the market, I can't be too critical of it.

If a truly random file, (called a direct file on some systems and an indexed sequential file on others) is available, then the problem of designing a dictionary is simplified. With one entry for each word, you simply set each word up as a key and do a random seek. If there is a valid read on the file, then the word is good; if an invalid read is detected, the word is bad. This method is much more straightforward because the document can be scanned serially while the dictionary is accessed randomly. It does present another problem though.

This problem is that most direct files rely on fixed length keys. This means that the file length will be the maximum

Spelling Verifier, continued...

word length multiplied by the number of word entries. A typical file of 50,000 words with a maximum word size of 25 would take 1,250,000 bytes of file space, plus whatever overhead the access method imposed. In my mind, this is not practical for personal computer users.

Fortunately, there is an easy solution to this problem. That is to segment the dictionary by word size. Thus, you could have one dictionary for short words and another for longer words. You could even go all out and have 24 dictionaries, one each for words of length two through 25. And of course there are several intermediate divisions you could use.

Another breakdown of the dictionary can be by frequency of use. Some words in the English language are used significantly more often than others. For example, the word "the" is used over 200 times in this article. On the other hand, the word "narrowminded" almost didn't get used at all.

It would not be very hard to put together a list of the words with the highest probability of use. I have seen lists as large as 5000 words, but we would not have to go that far. The list in Figure 1 represents almost one third of the words I use in my writing. If this list were kept

and	.028	in	.018	that	.014
as	.007	is	.008	the	.059
for	.007	it	.014	then	.006
had	.010	of	.023	this	.012
he	.011	on	.008	to	.031
her	.009	out	.005	was	.019
his	.006	she	.022	you	.006
if	.006				

Figure 1. This table shows the 22 most common words in my own writing and the probability of occurrence of each word. In these words we have almost one third of the words used in any of my writing. This distribution is probably similar to the distribution of words in this magazine, and in the whole body of English text.

in memory and checked first, it would save one third of the disk seeks.

There are other sorts of words that either must or should be kept in memory in a spelling verifier. One of these is temporary words, that is, words that are peculiar to the document being verified. This would include proper names, such as the addressee of a letter, but it might also include abbreviations. Other choices for a word memory file are words that have already been looked up once and words that must be added to the dictionary.

Punctuation

Most punctuation is ignored, but there are two punctuation marks that must be dealt with in a spelling verifier. These are the apostrophe and the hyphen. The easiest to deal with is the apostrophe. One way to treat it is to squeeze it out of words. This would mean, for example, that "miners" and "miner's" could both be represented by the same dictionary entry. It would also mean that "couldn't" would be represented in the dictionary as "couldnt." The alternative, of course, is to consider

LET YOUR APPLE SEE THE WORLD!

The DS-65 Digisector® opens up a whole new world for your Apple II. Your computer can now be a part of the action, taking pictures to amuse your friends, watching your house while you're away, taking computer portraits ... the applications abound! The DS-65 is a random access video digitizer. It converts a TV camera's output into digital information your computer can process. The DS-65 features:

- **High Resolution** — a 256 × 256 picture element scan
- **Precision** — 64 levels of grey scale
- **Versatility** — Accepts either NTSC or industrial video input
- **Economy** — A professional tool priced for the hobbyist

The DS-65 is an intelligent peripheral card with on-board software in 2708 EPROM. Check these software features:

- Full screen scans directly to Apple Hi-Res screen
- Easy random access digitizing by Basic programs
- Line-scan digitizing for reading charts or tracking objects
- Utility functions for clearing and copying the Hi-Res screen

Use the DS-65 for precision security systems; computer portraiture; robotics; fast to slow scan conversion; moving target indicators; reading UPC codes, musical scores and paper tape and more! **GIVE YOUR APPLE THE GIFT OF SIGHT!** DS-65 Price: \$349.95 / FSII Camera Price: \$299.00 / Combination Price: \$599.00

ADDITIONAL SOFTWARE FOR THE DS-65

—**Picture Scanner**: Provides a variety of different dithering algorithms for compressing the digitized image into the Hi-Res screen. Available on 13-sector disk. Price: \$39.95

—**Superscan**: Enables you to enhance the DS-65's Hi-Res pictures with colors! Choose from 21 different colors and assign them to grey scale values, modify pictures, zoom, enhance contrast, etc. Print routines for the Anadex and Paper Tiger* are provided. Comes on a 13-sector disk. Written for The Micro Works by Magna Soft. Price: \$79.95

—**Portrait System Software**: This program includes captions and a credit line, reverse printing for T-shirt application and the option to save portraits on disk. Specifically for use with a Malibu 165 printer. Call or write for more information.

*Paper Tiger is a trademark of Integral Data Systems, Inc.

[illegible]

In this code we also open the main dictionary file and retrieve the value W that is kept in its header. W is the number of the next available file entry and is used in the binary search and file update routines.

Most words that contain a hyphen as part of the spelling, such as our example “user-friendly,” are made up of roots that are valid words in their own right. As a result, if this form of the hyphen is ignored, many longer compound words can be eliminated from the dictionary. This does not apply to all words; one exception is “cul-de-sac.” In other words, either way there is some problem. I prefer ignoring the hyphen used this way, because it makes it easier to ignore forms one and two.

When a word is not found in the dictionary, it must be flagged as incorrect, and the user must be given several choices as to what to do. The possible choices are: 1) to correct the word in place; 2) to correct every occurrence of the word; 3) to add the word to the temporary dictionary for use on the rest of this document; 4) to add the word to the temporary dictionary for later inclusion in the permanent dictionary; 5) to add the word to the permanent dictionary immediately; or 6) to ignore the word. All of these choices except the last require extra coding, and thus memory space and other systems resources, to implement. For this reason, it is rare to find all of these features in the same program.

This brings us to a question that has been haunting programmers and system designers for decades: What compromises should I make with speed, space and features? Since I had chosen Basic in which to write my verify program, I was faced with this problem from the very beginning. It is not that Basic is a bad language, in fact it has many advantages. Chief among its advantages is that it is widely available. Almost every personal computer comes

```

220 INPUT"SKIP ANY WORDS---";Q$
230 IF LEFT$(Q$,1)<>"Y" THEN 350
240 INPUT"HOW MANY PAGES---";SK
250 IF SK<1 THEN 350
260 FOR J=1 TO INT(SK#8)
270 IF EOF(1) THEN 1110
280 LINE INPUT#1,L$
290 PRINT L$
300 NEXT J
310 PRINT CHR$(7);"SKIP MORE---";CHR$(7);
320 INPUT Q$
330 IF LEFT$(Q$,1)="Y" THEN 240
340 GOTO 360

```

I avoid dividing words like the plague, so I have left all word divide hyphens alone. If you prefer to divide words in your typing, then you can add this feature yourself.

OF ALL THE THINGS YOU BUY, HOW MANY ARE GOOD ENOUGH TO BE WARRANTED 5 YEARS?

Few disks stand the test of time. Because few are built to the precision standards or certified to the critical levels of Omni's complete line.

Each Omni disk is rated for 12 million passes without disk-related errors or significant wear. Each is certified error-free at a minimum of twice the error-

threshold of your system. And built to exceed all industry specifications including those of ANSI, ECMA, ISO and virtually every drive manufacturer. So you can count on them for the long haul. We guarantee it.

Call toll-free (800 343-7620) for your nearest dealer. In Mass., call 617 799-0197.

```

350 IF EOF(1) THEN 870
360 W$=""
370 C$=INPUT$(1,#1)
380 C$=T$(ASC(C$))
390 IF C$="*" THEN GOTO 350

```

Figure 5. This little piece of code scans for the beginning of a word. If it does not find an alphabetic character, it loops up to line 350.

```

400 W$=W$+C$
410 C$=INPUT$(1,#1)
420 C$=T$(ASC(C$))
430 IF C$="*" THEN 450
440 GOTO 400
450 PRINT W$;" ";

```

Figure 6. This piece of code builds the word in the work buffer, then displays it to the user.

```

460 IF LEN(W$)<2 THEN 350
465 IF LEN(W$)>15 THEN PRINT"<-LEN REJECT";GOTO 350
470 H=W1-1:L=0:S=INT(H/2)
480 IF W$=W$(S) THEN 350
490 IF W$<W$(S) THEN H=S:S=INT((H-L)/2+L):GOTO 510
500 IF W$>W$(S) THEN L=S:S=INT((H-L)/2+L)
510 IF H-L>1 THEN 480
520 IF W$=W$(H) THEN GOTO 350
530 IF W$=W$(L) THEN GOTO 350
540 K=L
550 IF W$(L)<W$ THEN K=H
560 IF LEN(W$)>4 THEN 740

```

Figure 7. Here we perform a binary search to see if the word is in our memory file. If it finds the word, the program will loop back to find another word. If it does not find the word, it remembers in K where the word should have been. This will allow us to add the word to the memory file later if we want to.

Notice also the trap in line 465. There are words longer than 15 characters in the English language, but I rarely use them. In fact, this trap has never been tripped.

When an apparently incorrect word is found, you have only three choices with my program. You can press R for record in temporary dictionary, Q for stop processing, or RETURN for ignore the word and proceed. When the end of the file is reached or a Q is entered, you are asked if temporary words should be recorded permanently. This allows you to add to the dictionary as the program is being run.

Building The Dictionary

Rather than sitting down with a dictionary and typing words in, I have been

letting the program build the dictionary. On one system I used, we had something like 80,000 words in our dictionary. Even so, every document we verified contained some words that were missing from the dictionary. This meant to me that if I had sat down with a book like *Webster's Instant Word Guide* and typed in words, I would be putting in a great deal of effort and ending up with a dictionary that still didn't match my vocabulary. So by letting the program itself update the dictionary, I am creating a dictionary that exactly matches my vocabulary.

```

570 PRINT CHR$(7);"<--- Misspelled R=record?";CHR$(7);
580 Q$=INPUT$(1)
590 PRINT Q$
600 IF Q$="Q" THEN 870
610 IF Q$<>"R" THEN 350

```

Figure 8. This is where we check to see if the user wants to record the word in the dictionary. There are two interesting things about this piece of code. The first is that we use the INPUT\$ function instead of the INPUT command. To respond to this question, the user need only press one key. This is more efficient than having to press the response code and then the RETURN key. We do pay a price, though, in that it is easier for the user to press the wrong key. (Perhaps we should put more error checking here.)

The other interesting thing is that this code is not at a logical place in the flow of the program. This is because Basic does not have a convenient way to move lines. As I made changes in the logic of the program, this code stayed where I had originally put it.

```

620 IF K<>0 THEN 670
630 FOR J=W1 TO 1 STEP -1
640 W$(J)=W$(J-1)
650 NEXT J
660 GOTO 700
670 FOR J=W1 TO K STEP -1
680 W$(J)=W$(J-1)
690 NEXT J
700 W$(K)=W$
710 W1=W1+1
720 IF LEN(W$)<5 THEN T=T+1
730 GOTO 350

```

Figure 9. This is where we insert a new word into the memory file. This file originally contains the words from my dictionary that were from two to four characters long. We will store all words in this array, and if we are asked to record the new words, then we will break this array in two by word size, recording each group of words in the appropriate dictionary. (See Figures 11 through 14.)

Of course, I have had to sit and look up a great many words before pressing R for record. You could load the dictionary faster by typing into a document the words you want to load into the dictionary, and then verifying the document. For best efficiency, batch the words in groups of about 500 and modify the program to record each word without operator intervention.

Priming The Program

To prime my program I did three things. First of all, the original program had only a memory file. This file was

770 IF W$=W9$ THEN GOTO 350
780 IF W$<W9$ THEN H=S:S=INT((H-L)/2+L):GOTO 800
790 IF W$>W9$ THEN L=S:S=INT((H-L)/2+L)
800 IF H-L>1 THEN 760
810 GET #3,H
820 IF W$=W9$ THEN GOTO 350
830 GET #3,L
840 IF W$=W9$ THEN GOTO 350
850 W$=LEFT$(W$,INSTR(W$+" ", " ")-1)
860 GOTO 570

```

Figure 10. This is the binary search of the disk resident dictionary. Notice that it is almost identical to the binary search used on the memory file.

```

870 INPUT"RECORD TEMPORARY WORDS";Q$
880 IF LEFT$(Q$,1)="N" THEN END
890 IF T=0 THEN 960
900 OPEN "O",#2,"B:WORD4"
910 FOR I=0 TO W1-1
920 IF LEN(W$(I))>4 THEN 940
930 PRINT #2,W$(I);";";
940 NEXT I
950 CLOSE #2

```

Figure 11. This is the first part of the close routine. The program comes here when it detects an end-of-file on the document or when the user responds with a Q to the misspelled message. In this code the user is asked if the temporary words should be stored, and the short temporary words are written to disk.

```

960 K=0
970 FOR I=0 TO W1-1
980 IF LEN(W$(I))>4 THEN W$(K)=W$(I)+SPACE$(15-LEN(W$(I)))
    K=K+1
990 NEXT I
1000 IF K=0 THEN END
1010 FOR I=K TO W1:W$(I)="":NEXT I

```

Figure 12. The second part of the close routine collects all temporary words longer than four into one place and releases the extra space.

```

1020 I=2
1030 IF I=W THEN 1170
1040 GET #3,I
1050 IF W9$<W$(0) THEN I=I+1:GOTO 1030
1060 W$=W9$
1070 LSET W9$=W$(0)
1080 PUT #3,I
1090 W$(0)=W$
1100 I=I+1
1110 FOR K2=1 TO K-1
1120 IF W$<W$(K2) THEN W$(K2-1)=W$:GOTO 1160
1130 W$(K2-1)=W$(K2)
1140 NEXT K2
1150 W$(K-1)=W$
1160 GOTO 1030
1170 K1=0
1180 FOR J=I TO I+K-1
1190 LSET W9$=W$(K1)
1200 PUT #3,J
1210 K1=K1+1
1220 NEXT J

```

Figure 13. The third part of the close routine is probably the most complicated piece of code in the program. It merges the long words from the memory file with the dictionary file on disk.

```

1230 LSET W9$=STR$(J)
1240 PUT #3,1
1250 CLOSE #3
1260 PRINT CHR$(7);"FINI";CHR$(7);J;CHR$(7)
1270 END

```

Figure 14. Finally, we write the new dictionary file length into the header record and finish. The program beeps when it is through so that the user can go do something else during the three plus minutes it takes to reorganize the dictionary file.

```

10 OPEN "I",#2,"B:WORDS"
20 OPEN "R",#1,"B:RWORDS",15
30 FIELD #1,15 AS W9$
40 OPEN "O",#3,"B:WORD4"
50 I=2
60 IF EOF(2) THEN 130
70 INPUT #2,W$
80 IF LEN(W$)<5 THEN PRINT #3,W$;";";:GOTO 60
90 LSET W9$=W$
100 PUT #1,I
110 I=I+1
120 GOTO 60
130 LSET W9$=STR$(I)
140 PUT #1,1

```

Figure 15. This program is run to brake a memory file image into a new memory file image of short words and a random disk file of long words for my spelling verify program.

loaded and saved on disk into a file called WORDS. To start, I created the file WORDS with my text editor to contain the words in Figure 1. After this file had grown to about 1000 words, the memory file was too unwieldy to use. At this point I added the coding for the disk file to my program and ran the program in Figure 15 to initialize it.

Additional Comments

There is one significant fault with this verifier. It is slower than the other inter-

active verifiers that I have used. I could probably have gotten more performance out of the program if I had coded it in some other language. It is true that I do have more time than money, but I would rather put up with the small amount of slowness in this program than try to debug a PL/I version, for example.

An interactive spelling verify program has only limited application, primarily because you have to sit there while it is running. (This is a problem with *fast* interactive spelling verifiers also.)

Furthermore, there are several spelling mistakes that this kind of program will not catch. I have already started thinking about what the next refinement to this program should be. The problem statement is: without going into artificial intelligence or syntactical analysis, devise a program that will aid in the detection of homonym errors. Examples of homonyms are: die and dye; there and there; whey, way, and weigh. I'll start on it as soon as I've weeded the garden and cleaned the garage. □

System Saver™

The most important peripheral for your Apple II and IIe.

For Line Surge Suppression

The SYSTEM SAVER provides essential protection to hardware and data from dangerous power surges and spikes.

By connecting the Apple II power input through the SYSTEM SAVER, power is controlled in two ways: 1) Dangerous voltage spikes are clipped off at a safe 130 Volts RMS/175 Volts dc level. 2) High frequency noise is smoothed out before reaching the Apple II. A PI type filter attenuates common mode noise signals by a minimum of 30 dB from 600 khz to 20 mhz, with a maximum attenuation of 50 dB.

For Cooling

As soon as you add 80 columns or more memory to your Apple II you need SYSTEM SAVER.

Today's advanced peripheral cards generate more heat. In addition, the cards block any natural air flow through the Apple II creating high temperature conditions that substantially reduce the life of the cards and the computer itself.

SYSTEM SAVER provides correct cooling. An efficient, quiet fan draws fresh air across the mother board, over the power supply and out the side ventilation slots.

For Operating Efficiency

SYSTEM SAVER contains two switched power outlets. As shown in the diagram, the SYSTEM SAVER efficiently organizes your system so that one convenient, front mounted power switch controls SYSTEM SAVER, Apple II, monitor and printer.

Available in 220/240 Volt 50 Hz

The heavy duty switch has a pilot light to alert when system is on. You'll never use the Apple power switch again!

Easy Installation

Just clips on.
No mounting or hardware required.
Color matched to Apple II.

Compatible with Apple Stand

PROGRAMMER'S GUIDE TO CP/M®

Edited by Sol Libes

Here's an important collection of CP/M insights that you'll never find in any CP/M manual. CP/M is the most popular microcomputer DOS in use today, and this widespread use has generated many innovative techniques and enhancements of CP/M. *Programmer's Guide to CP/M* tells you what these enhancements are and how to put them to use, how to get around apparent limitations of a CP/M system and why CP/M is far more versatile than you might have imagined. Every article in *Programmer's Guide to CP/M* originally appeared in MICROSYSTEMS between

January 1980 and February 1982. Except for this collection, these articles are now unavailable! *Programmer's Guide to CP/M* gives you an in-depth look at CP/M from the viewpoint of the programmer—the individual who creates the software that interfaces directly with CP/M, or who is installing CP/M on systems for which configurations do not already exist.

Contents include "An Introduction to CP/M," "The CP/M Connection," "CP/M Software Reviews," "CP/M Utilities & Enhancement," "CP/M 86" and "CP/M Software Directories." 200 pages, \$12.95.

Typewriter

Buck Buchanan

This program was designed to give my 13-year old son some practice at finding the keys on the Apple keyboard.

He was a hunt-and-pecker when he started. After only 12 15-minute sessions with "Typewriter" he could use the keyboard without visual reference. Speed, of course, comes with practice. ☐

Conversions Are Downhill With Upgrade

If you upgrade your TRS-80 from cassette to disk, you may soon discover a software problem: your old Level II Basic programs won't run on your new disk system. The disk operating system (DOS) overlays Level II Basic programs, effectively erasing them because disk Basic resides higher in memory than does Level II Basic.

Those old Level II programs, good as they are, just won't work. And with this discovery, a disheartening image appears; you see yourself keying in your entire software library again—hours and hours of your time lost.

Unless you have a conversion program like Upgrade.

Upgrade is an assembly language program that moves Level II programs up in memory, resets the line pointers, and allows your old programs to run in disk Basic.

Operating Instructions

If you have an editor/assembler, compile the program and save it on disk. (We'll discuss the assembly language listing later.)

To convert one of your old Level II programs, first load Upgrade into memory while in DOS. With the program successfully loaded, hold down the BREAK key and reset the computer. This transfers you to Level II Basic. Don't worry; the converter program is still in memory and has not been lost.

Next, load your Basic program from tape as you normally do. When READY

Gary Grout

appears, type SYSTEM and answer the prompt *? by typing /65184. This sets Upgrade into operation; your Level II program is moved into high memory, and the line pointers are reset. You have now moved the old program out of the way so that when you call the disk operating system back, it won't step all over your Level II program.

The next thing to do is reboot (press reset) and return to DOS. When the DOS READY appears type BASIC. Once in disk Basic, you type SYSTEM, but this time when you see *?, you enter /65382. Your old Level II program moves down into the disk Basic area, and the pointers are reset. You can now save your old program on disk, and it will work just like new.

Don't run the converted Basic program before you save it or you will get an error message.

If you don't have an editor/assembler to compile the assembly language program, you can use the Basic program in Listing 1. In disk Basic, type the program as shown. Then you may save it on disk by rebooting and using a DUMP command typed exactly as follows (including the spaces):

Model III: DUMP UPGRADE (START=0FEA0,END=0FF80)

Model I: DUMP UPGRADE (START=X'FEA0',END=X'FF80')

In disk Basic, you load and run this Basic program. Then you reset while holding down the BREAK key to transfer to Level II Basic. At this point you load your taped program and perform the procedure described earlier.

The Assembly Language Program

The assembly language conversion program loads at FEA0H which means you will need 48K of memory (BFEAH for 32K). See Listing 2.

The program begins by resetting the line pointers. The first two bytes of every Basic program line contain the address where the next Basic line starts. The two bytes are referred to as a pointer. These addresses must be changed if the program is to be moved up in memory. The code between the labels RENUM and DONE, lines 140 to 300, resets the pointers.

Resetting the pointers is like rebuilding stairs from the bottom up. You fix the first stair, step on it, and use it to fix the next. With line pointers, you get the first address, save it for later reference, fix it by adding an offset, and replace it in the original memory address. You then retrieve the old address you saved, go to that location in memory to find the next pointer, and repeat the process of adding an offset.

The offset is the number of bytes difference between where Level II Basic loads and where disk Basic loads in memory. For the Model I the offset is 273BH and for the Model III, 25F0H.

The only other thing the renumbering routine must do is check for the end of the Basic program. A Basic program

Conversions, continued...

ends when the two bytes of a line pointer contain zeros. So the renumbering routine works by checking the line pointer for zeros, renumbering the line pointer by adding an offset, and then going to the next line pointer.

Looking at the assembly language listing, you'll see the line pointer is first loaded into the IX register in line 130. A check is then made to determine if it is the end of the program. The check is performed by transferring the line pointer into the DE register, loading D

into A register, and then using the OR statement in line 170. The zero flag will be set only if both D and E are zeros. When the end of the program is reached, we branch from line 180 to 300 labeled DONE.

If the no zero flag is set, then we simply move the line pointer from DE to HL and add the offset contained in BC. HL is then replaced in the original Basic program memory location, and the process begins again with the next line pointer whose address is in DE.

After resetting the pointers, we must move the program to high memory. This is done with a block move. To do a block move you must know the start of the memory section to be moved, the destination address to which it will be moved, and the number of bytes of information to move.

In this case the start of the memory section is 42E9H, the start of Level II Basic. This is stored in the HL register. The destination address is 82E9H (my favorite number above 16K Level II) which is stored in the DE register.

Finally, we must compute the number of bytes to move. We do this by subtracting the start of the program from the end of the program. The start is 42E9H, and son of a gun, the end of the program is still in the IX register after we reset the pointers. So from the label DONE in line 300 to line 380 we do the subtraction and store the result (the length of the program) with the label LEN. Now that we have all the information we need, the program performs the block move.

After the move, the program prints instructions on the screen and falls into an infinite loop awaiting instructions.

Next, you return to disk Basic. All that is left is to move the program down to the proper memory location again. How will we do this? Another block move.

This time, the start of the memory section to be moved is 82E9H. The destination is taken from the start of Basic, vector 40A4H. The length of the program is retrieved from LEN. With 82E9H in HL, 6A24H or 6AD9H in DE (depending on whether you have Model I or Model III respectively), and the length of the program in BC, the move is performed again.

Last, we must set the end of the Basic program in memory location 40F9H. And again, the address is still in the HL register after the block move, easy to find and use.

Completing The Conversion

Before you get too excited about all the typing you have saved yourself, you should know that some Level II statements won't run in disk Basic. For example, USR statements in Level II have the form A=USR(0). Disk Basic has expanded the number of USR routines to ten. Because of this expansion, the syntax has changed to A=USR1(0), with a number following the USR in the statement. Where before Level II POKED the start of the USR routine into memory, disk Basic defines the start with a statement such as DEFUSR1=&HFEA0. You will have to add or modify these statements accordingly.

BMC. The logical choice. Best for your system. Better for your budget.

If you choose your display monitor with the same care you've given to the other components of your business or personal computer system, you'll choose BMC.

The BM-12AU features a P31 picture tube that gives you a large, bright 12 inch diagonal green display with a bold 80x24 character format that is remarkably easy on your eyes. And each unit is given a careful underscan adjustment at the factory so even the corners are clear and sharp. The BM-12AU connects quickly and simply to most popular computers with no interface or modifications needed. But best of all the BM-12AU is designed to fit your budget. Compare specifications, quality and price. BMC is the logical choice.

```

You should also check the POKE statements. If any of these uses an address between 42E9H and 6A24H, it may interfere with the disk operating system. You should probably check any POKE statements that use high memory as well. Because disk Basic is higher in memory than Level II Basic, your old machine language routines may be overwritten by the disk Basic program. Pray they aren't, because you may then have to reassemble them with a new origin.

It is my assumption that with 16K dynamic RAM chips selling below \$20 a set you probably have 48K of usable memory. If not, here is one other caution. If your memory is limited to 32K and you assemble Upgrade to fit your computer, your Basic program must not totally use up 16K of Level II Basic. Otherwise the block move will overlay Upgrade and you won't be able to move the Basic program back down in memory. With 48K, however, Upgrade won't be touched. Listing 3 is the Basic program for 32K. To store it on disk, execute the dump command:

DUMP UPGRADE (START=0BEA0, END=0BF80)

I hope this program will help you with your expanded computer system. I am sure that when you bought your disk drive you were probably not concerned with the upward compatibility of programs and may not have anticipated what the conflict between Level II Basic and Disk Basic really meant—hours of retyping. Now that you have Upgrade, however, you have plenty of spare time to devote to mowing the lawn, shopping, fixing the car, doing the laundry . . .

Listing 2. Upgrade assembly language listing.

INTRODUCING THE IMPROVED LNW 80 MODEL II ... AT AN UNBELIEVABLE PRICE!

This computer has it all! TRS-80™ Model I and CP/M® software compatibility with two operating systems; DOSPLUS 3.4 and CP/M 2.2. The LNW 80 MOD II can read and write the 5¼" disk formats of several CP/M computers including: OSBORNE, KAYPRO, XEROX 820, CP/M 86 as well as standard 8" IBM format. Standard features: 96K of RAM, parallel and serial ports, cassette and joystick ports, RGB and Composite Color interfaces, HI-RES graphics and much more! Six month warranty.

~~\$1995.~~

\$1489.

SYSTEM SPECIAL!

Complete LNW 80 Model II system includes:

Enhanced LNW 80 MOD II \$1995.
2 TEC disk drives, 40 tracks \$660.
BMC 12A green phosphor monitor ... \$149.
Video and drive cables \$29.

\$2833.

**SAVE

A Program To Trace Variables In Basic Programs

Have you ever searched through a program looking for a variable? Have you ever deleted a line only to find that 87 GOTOS in your program then had to be sent somewhere else? If you believe you were meant for better things than tracing jumps and variables in your programs, read on.

I wrote Trace to solve both of the above problems. Trace is a Basic program that will trace any variable and print out on the display each and every line in which it occurs. Trace also has the ability to find every GOSUB, GOTO, IF-THEN, RESUME, and ELSE statement that jumps to a particular line.

Programs written in Basic have many advantages. They are easy to understand and, more important, easy to modify. Unfortunately, Basic has a well deserved reputation for being very, very slow. Trace will take between forty seconds and one minute to find all the lines in which a particular variable is located in a 5K program. This still beats listing the program and looking through all those multiple statement lines.

Running The Program

This program contains no frills or fancy displays. Every single convenience has been left out in the interest of speed and memory requirements. The reward for this is that Trace uses fewer than 800 bytes. Using Trace is very easy. Just follow these simple instructions:

1. CLOAD the program you want to trace through.

Robert Milazzo

2. In the command mode enter the program in Listing 2.

3. CLOAD "Trace".

4. POKE 16548, 233: POKE 16549, 67 (Model 1, POKE 16549, 66).

Now when you list the program you will find that both programs have been linked together. This technique can also

be used on other programs that you want to merge.

Just type in RUN 65000 and you are off. The program will then ask you to enter the variable or line you wish to trace. If you want to trace variable A1, for example, type in A1. If you want to find all the lines that jump to line 1000, then enter 1000.

Tracing subscripted variables is done in a special way. Type in A(to find the array called A. The left parenthesis is

Listing 1.

```

important because it tells the program that it is looking for an array.

Understanding The Program

This program makes use of the way Basic stores programs in memory. Figure 1 shows how a short program is stored.

The start of the program storage area in the Model III is location 17385. Locations 17385 and 17386 contain the address of the beginning of the next line. This can be checked by multiplying the contents of 17386 by 256 and adding the result to the contents of location 17385.

The next two bytes (locations 17387 and 17388) represent the line number again in least significant followed by most significant byte format.

Location 17397 contains a zero: This marks the end of every line of a Basic program. In this case, it marks the end of line 10.

Hopefully, you can now see why every line has an overhead of five bytes. Two are needed as pointers to the next line, two are used to contain the line number, and one is needed to mark the end of the line. This is the reason multiple statement lines are used to save space.

The actual program data for line 10 begins at location 17389 and ends at location 17396. It is this part of the program with which we are most concerned. The first byte is a 129 and represents the Basic command FOR. All of the Basic commands are tokenized in this manner to save memory. The next byte is a 78, which stands for the variable N.

Figure 1.

<pre> 10 For N=1To100 20 Print N 30 Next </pre>	
Storage Of The Above Program In Memory	
Location	Contents
17385	246
17386	67
17387	10
17388	0
17389	129
17390	78
17391	213
17392	49
17393	189
17394	49
17395	48
17396	48
17397	0
17398	253

All Basic variables and numbers are stored in ASCII formats. The following 213 is another token that represents the equal sign. The 49 is the ASCII representation of the number 1. The following 189 is the token for the Basic command TO. The next three locations contain the ASCII representation of the number 100.

Armed with this knowledge, to find the variable B in a program, all you have to do is search through memory until an ASCII 66 is found. To find a GOTO 100 statement, all that is required is to find four consecutive bytes that equal 141, 49, 48 and 48. It is a little bit more complicated than this, but I think you can get the idea.

The Logic Of The Program

Trace has been written in a compressed format that undoubtedly makes the program harder to read. In return for the confusion, the program runs faster and uses less memory. I hope that the following comments can help clear up some of the confusion.

Lines 65000-65020 are simple enough. They clear the screen, set up the main program variables as integers, and prompt you to enter the target string. Defining as many variables as possible as integers definitely speeds things up. This is almost always true and should be kept in mind when writing your own programs.

Lines 65030-65060 are the main program loop. Each location starting with 17389 is checked, and its contents stored in the A variable. If the token that represents a DATA statement, or a REM, or simply a zero is discovered, then control passes to the subroutine at 65190. This is done to prevent the program from searching through lines in which vari-

ables or jumps can't possibly be found. If a quote is found, control passes to the subroutine at 65180. Again this is done to prevent the program from doing any work on the data that are enclosed by quotes.

Line 65050 tests whether or not a match has been found between the first character of D\$ and the current memory location. If a match is found, then further testing begins at line 65070. If a match is not found, then the next location is tested.

Line 65070 tests whether the character is alphabetic or numerical. If the character is alphabetic, then the program jumps to line 65110. If it is numerical, then control drops to the next line in the program.

Lines 65080-65100 backspace through memory searching for the token that represents one of the jump statements. All spaces are ignored in line 65090. Five Basic keywords are scanned for. They are GOTO, GOSUB, RESUME, THEN and ELSE. If one of these tokens is not found, control passes back to the main loop.

Lines 65110-65170 comprise the main comparison loop. The contents of each successive memory location are converted to a string and added together to form Z\$. If Z\$ equals D\$, then the required variable or jump has been found. If the two strings are found to be unequal, control passes back to the main loop.

Line 65180 is the subroutine responsible for skipping through all the string data that are enclosed by quotation marks.

Lines 65190-65210 keep updating the line pointers and the current line number being searched.

Line 65000 marks the end of the target program, and program operation ceases.

Modifications And Precautions

This program is very easy to use and to modify. A list of all the variables used in the program is provided so that you will be able to find your way around. Model I owners should change the 17389 in line 65030 to 17133. If the display is not to your liking, modify line 65170 until you are pleased. You can adjust the program to trace through only part of a program by putting the appropriate line number in line 65210.

I have run this program many times and haven't had any problems. If a problem does come up, check the listing or, better yet, run the target program before tracing. This will help weed out any syntax errors such as open quotes. Trace is very sensitive to this particular error in the target program and will react unreliably if one is found. □

Variable List

A	Value stored in location N
B	Position of D\$ undergoing testing
D	Value stored in location S
N	Memory location currently being tested
S	Memory location being examined for a jump statement
LI	Current line number being worked on
PO	Address of the beginning of the next line
D\$	Inputted line number or variable
Z\$	String being formed for comparison with D\$

wabash[®] diskettes for as low as **\$1.39 each!**

Now...Get High Quality at a Low Price

Wabash means quality products that you can depend on. For over 16 years, Wabash has been making high quality computer products. Wabash diskettes are made to provide error-free performance on your computer system. Every Wabash diskette is individually tested and is 100% certified to insure premium performance.

Why Wabash is Special

The quality of Wabash diskettes is stressed throughout the entire manufacturing process. After coating, all Wabash diskettes go through a unique burnishing process that gives each diskette a mirror-smooth appearance. Wabash then carefully applies a lubricant that is specially formulated to increase diskette life. This saves you money, since your discs may last longer. It also assists your disk drives in maintaining constant speed which can reduce read and write errors.

Special Seal...Helps Prevent Contamination

To keep out foreign particles, a unique heat seal bonds the jacket and liner together. A special thermal seal which avoids contamination from adhesives, is then used to fold and seal the jacket. This results in outstanding performance and true reliability. Wabash then packages each diskette, (except bulk pack) in a super strong and tear resistant Tyvek[®] envelope. The final Wabash product is then shrink-wrapped to insure cleanliness and reduce contamination during shipment.

Each Diskette is 100% Critically Tested

Since each step in the Wabash diskette manufacturing process is subject to strict quality control procedures, you can be sure Wabash diskettes will perform for you. And every Wabash diskette meets the ultra-high standards of ANSI, ECMA, IBM and ISO in addition to the many critical quality control tests performed by Wabash. Wabash does all of this testing to provide you with consistently high quality diskettes. Reliability and data integrity - that's what Wabash quality is all about.

Flexible Disc Quantity Discounts Available

Wabash diskettes are packed 10 discs to a carton and 10 cartons to a case. The economy bulk pack is packaged 100 discs to a case without envelopes or labels. Please order only in increments of 100 units for quantity 100 pricing. With the exception of bulk pack, we are also willing to accommodate your smaller orders. Quantities less than 100 units are available in increments of 10 units at a 10% surcharge. **Quantity discounts** are also available. Order 500 or more discs at the same time and deduct 1%; 1,000 or more saves you 2%; 2,000 or more saves you 3%; 5,000 or more saves you 4%; 10,000 or more saves you 5%; 25,000 or more saves you 6%; 50,000 or more saves you 7% and 100,000 or more discs earns you an 8% discount off our super low quantity 100 price. Almost all Wabash diskettes are immediately available from CE. Our warehouse facilities are equipped to help us get you the quality product you need, when you need it. If you need further assistance to find the flexible disc that's right for you, call the Wabash diskette compatibility hotline. Dial toll-free 800-323-9868 and ask for your compatibility representative. In Illinois or outside the United States dial 312-593-6363 between 9 AM to 4 PM Central Time.

Star Gazing

Whether you're a dyed-in-the-wool amateur astronomer or you can't tell a nebula from a noodle, the following programs (written in Microsoft Basic) should provide many hours of enjoyment. The first is designed to tell you what stars are visible on a given night and where they are located. The second is an interactive version to use with a telescope. I originally wrote them to help position my small field telescope, which doesn't have a clock drive mounting system for tracking stars. I discovered later that the programs make it super easy for the novice to locate stars and constellations, too. My ninth grade students give them a thorough workout every fall!

Star position is best described by using right ascension and declination. These are the astronomer's grid system, similar to latitude and longitude. The trouble the average person has in making any sense of them is due to the fact that he is stationary with reference to the stars, while the earth spins on its axis and revolves around the sun. The effect of this is that we have a slightly different view of the sky every night. Each six months we see the opposite half of the sky.

What we need is a grid system that is fastened to the ground where we are standing. The system of compass bearing and altitude is probably the simplest and best known. North is a compass bearing of zero, while east, south, and west are 90° , 180° , and 270° respectively. Full

James A. Ingram

circle brings you to 360° , at the starting point of zero. Altitude measures the angular height straight up from the horizon in degrees; the horizon is zero and straight overhead is 90° (called the *zenith*). An object at a compass bearing of 135° and altitude of 45° would be halfway between the horizon and overhead to the south-east.

The trick is to relate these two coordinate systems, one moving and one stationary, one tilted at an angle to the other. For the average mathematics professor, this is a piece of cake, but for the rest of us it poses a long and difficult problem. Enter the computer.

If we load the computer with a list of stars and their coordinates, we can let it decide what is visible on a given night and calculate the bearing and altitude. The first step is to freeze any motion, and for that reason the data is calculated only for a specific date and time of night. Next, the coordinates are mathematically rotated to your local horizon. Finally, the information is printed in a table. The calculations to perform all of this generate some other information useful to the astronomer and these data are included in the table.

Using The Program

In the first of the two Microsoft Basic programs, you are asked to enter the date and time. Enter both numbers as a five-

character string such as 01/22 or 18:30. Note that numbers must be two-digit and that the time is entered in 24-hour format. The program will accept any value to the nearest day or minute. Your entries are not checked to see if they are "real."

Next, you are asked whether you are on standard time or daylight saving time (since the sky rotates 15° every hour, this can make quite a difference in accuracy). Enter S for standard or D for daylight.

Last, you are asked for a lower limit of brightness to be included in the table. Astronomers call this *magnitude*; the larger the number, the dimmer the star. The brightest stars in the night sky are usually about zero or one, while the dimmest visible with the unaided eye are about five or six. For a table of bright stars only, enter a one or two; if you want everything, enter a magnitude of about 15.

After you enter the brightness limit, the computer takes over the work. First it prints a table heading with the date, the number of days that have elapsed from the first day of fall (the *autumnal equinox*), the time in three formats, your location in latitude and longitude, the brightness limit, and the position of due south in right ascension coordinates. It then begins searching through the data table, testing each item to see if it is above your horizon and if it is bright enough to include in the table. If it is, the program finishes the calculations and adds the item to the printed copy. The final table shows the name of the star, its brightness, its right ascension and declination, and its bearing and altitude.

7 very good reasons to try Micro The Computer Book Club®

Blue Ridge Summit, PA 17214

- **Reduced Member Prices.** Save 20% to 75% on books sure to increase your computer know-how
- **Satisfaction Guaranteed.** All books returnable within 10 days without obligation
- **Club News Bulletins.** All about current selections—mains, alternates, extras—plus bonus offers. Comes 13 times a year with dozens of up-to-the-minute titles you can pick from
- **"Automatic Order."** Do nothing, and the Main selection will be shipped automatically! But . . . if you want an Alternate Selection—or no books at all—we'll follow the instructions you give on the reply form provided with every News Bulletin
- **Continuing Benefits.** Get a Dividend Certificate with every book purchased after fulfilling membership obligation, and qualify for discounts on many other volumes
- **Extra Bonuses.** Take advantage of added-value promotions, plus special discounts; on software, games, and more
- **Exceptional Quality.** All books are first-rate publisher's editions, filled with useful, up-to-the-minute information

Micro The Computer Book Club®

Blue Ridge Summit, PA 17214

Please accept my membership in The Computer Book Club® and send the 5 volumes circled below, billing me \$2.95 plus shipping and handling charges. If not satisfied, I may return the books within ten days without obligation and have my membership cancelled. I agree to purchase 4 or more books at reduced Club prices (plus shipping/handling) during the next 12 months, and may resign any time thereafter.

Star Gazing, continued...

With list in hand, head for the nearest open field at the appointed time. Establish where north lies (from the North Star, not by compass), then measure off the bearing and altitude of the first star on the list. You should be able to find it on the first try. To measure the angles you can make an instrument called an *astrolabe* for accuracy, or you can use a system of hand measures. Holding your hand at arm's length against the sky, the width of your little finger is about one degree; your pointer, middle, and ring fingers together measure about five degrees; your closed fist measures about 10 degrees, and the distance from your pointer to your little finger when spread apart (until it hurts!) is about 15 degrees. Use both hands, and you can work your way around the horizon and up into the sky to the correct location. Just remember, the sky will be turning slowly while you gaze—after an hour or so, stars in the south and overhead will be visibly farther west than your table coordinates show.

The program is well documented with remark statements; by deleting them you may be able to pare down memory requirements. The data statements are arranged with name (string), magnitude (numeric), right ascension (string), and declination (numeric). You can add more, or shorten the table as long as you remember to change statement 265 to the new data table length. Be sure to enter your own latitude and longitude at lines 160 and 165. The value at line 170 corrects your local zone time to Greenwich time; the correct values for the continental United States are as follows: EST,19; CST,18; MST,17; PST,16.

I have included stars, nebulae, clusters, and other objects of interest in the data table, but it may not suit your interests. You may want to enter the coordinates of the centers of major constellations, for instance. In any case, such information should be available at your public library in the astronomy section.

The second program is simply a bearing and altitude calculator. To use it, enter the date and time as before. To locate a given star, look up its right ascension and declination in a star atlas and enter the values into the computer. The CRT display will show some useful values and the bearing and altitude of the star in question.

You may enter data for several stars without having to re-enter the date each time; just respond Y to the question ANOTHER STAR (Y/N)? Typing an N stops execution.

The next big project will be to develop a program to locate the moon and planets on any given night. Any suggestions? What ever happens, the results should be far out. □

Sample run of STARS.

STARS.BAS - INTERACTIVE VERSION

THIS PROGRAM DETERMINES THE COMPASS BEARING AND ALTITUDE OF
ANY STAR AT A SPECIFIC TIME AND DATE. YOU MUST ENTER THE DATE,
THE TIME, AND THE RIGHT ASCENSION AND DECLINATION OF THE STAR.
DATE, TIME, AND RIGHT ASCENSION NUMBERS MUST BE ENTERED AS A FIVE
DIGIT STRING, SUCH AS '01/14' OR '04:30'. TIME MUST BE IN 24-
HOUR FORMAT.

ENTER DATE (MM/DD) :? 01/14
ENTER TIME IN 24-HOUR FORMAT (HH:MM) :? 22:00
ENTER RIGHT ASCENSION (HH:MM) :? 06:33
ENTER DECLINATION (D.DD) :? 14.2

LOCAL ZONE TIME = 22:00
ZENITH MERIDIAN RA = 7: 29
RIGHT ASCENSION = 06:33

LOCAL STAR TIME = 21: 21
DAYS FROM 9/22 = 114
DECLINATION = 14.2
COMPASS BEARING = 208.5
ALTITUDE = 60.1

ANOTHER STAR (Y/N) ? Y

ENTER TIME IN 24-HOUR FORMAT (HH:MM) :? 22:00
ENTER RIGHT ASCENSION (HH:MM) :? 16 4:50
ENTER DECLINATION (D.DD) :? 5.8
STAR IS BELOW HORIZON
ANOTHER STAR (Y/N) ? N
OK

Soaring Cycles

With the roar of the crowd in your ears, you nose your motorcycle up to the starting line. You nervously glance down the long runway to the ramp and the ten buses beyond. There is no time to turn back.

Letting out the clutch, you gun the engine. You race down the runway gaining speed and watch as the ramp looms

Daniel Storch, Box 133, R.D. #1, Avonmore, PA 15618.

Daniel Storch

closer. With a jarring impact, your bike hits the ramp and goes flying through the air.

From your bird's eye view, you know it is going to be close. As your bike descends, you check your position... it will be close...

No need to worry though, because if

you crash, you will only have to run the program again. Soaring Cycles is a fast, high-resolution graphics simulation of a motorcycle jump. It is written in Applesoft Basic and uses standard shape tables and sound effects.

When writing this program, I valued clarity over efficiency, so some parts of the program may seem rather slow and cumbersome. However, it can easily be modified to obtain quicker and smoother animation (not only by using more ad-

Middle of a jump.

Reliable Business Software

DATASMITH software requires no previous computer experience, so it can be used effectively by your present office staff. The menu-driven systems feature extensive error detection and correction facilities, so they are "friendly" to the user.

- **GENERAL LEDGER** Everything you need to keep the books. Features easy-to-use data entry and error correction, trial balance, fast post, and a variety of comprehensive reports. Automatic error detection keeps the books in balance. Writes checks and makes journal entries in one operation.
- **PAYROLL** A very flexible system that adapts to a wide variety of needs. Features Federal, state, and local tax calculations, EI credit, and special pay and deduction amounts. Prints all necessary reports, paychecks, and W-2 forms.
- **DATA MANAGER** A powerful generalized data management system that lets you define, enter, update, sort, select, and print reports from a database of your own design. Applicable to almost any job where records must be kept, this system can replace literally hundreds of programs.

Put your computer to work with these sophisticated systems now. Programs are available for 48K or larger two-disk systems in your choice of code for Microsoft BASIC-80™ under CP/M™, IBM™ Personal Computer BASIC, or Micropolis™ BASIC.

"Q-PRO 4 blows dBASE II away"

We now complete complex applications in weeks instead of months."

says Q-PRO 4 user,
Richard Pedrelli, President
Quantum Systems, Atlanta, GA

"As a dBASE II beta test site the past two years, we were reluctant to even try Q-PRO 4. Now we write all our commercial applications in Q-PRO 4. We find it to be an order of magnitude more powerful than dBASE II."

Q-PRO 4's 4th generation syntax is so efficient, we now complete complex jobs in weeks instead of months. Superb error trap and help screen capabilities make our finished applications far more user friendly. And our programs run much faster, too.

In my estimation, any application programmer still using outdated 3rd generation data base managers or worse, a 2nd generation language like BASIC, is ripping himself off."

Soaring Cycles, continued...

vanced animation techniques, but by generally improving the program execution speed).

The Program

To aid you in understanding the program better and to guide you in modifying it, I have listed the variables used and a step-by-step explanation of how the program works.

Variables

- B - Number of buses you wish to jump.
- K - If K = 1 then you have crashed; if not, you made a successful jump.
- N - The new throttle setting.
- O - The old throttle setting.
- S - The sound constant.

- S1 - The shape rotation variable.
- X1 - The x coordinate of the motor-cycle for drawing.
- X2 - The x coordinate of the motor-cycle for erasing.
- Y1 - The y coordinate of the motor-cycle for drawing.
- Y2 - The y coordinate of the motor-cycle for erasing.
- C, I, P, V - Used in FOR/NEXT loops.

Explanation

Lines 10-100 print the title page and instructions.

Lines 110-180 initialize the program.

Lines 190-240 draw the buses, the ground, and the ramps.

Lines 250-260 read the paddle, update the variables, and check for over-

acceleration (top of the main program loop).

Line 270 determines if you have hit the ramp yet.

Line 280 is the sound routine.

Line 290 changes the x coordinate of the bike.

If the motorcycle goes off the screen to the left, line 300 lowers it a level and sets it back to the far right.

Line 310 erases the motorcycle at the old position, draws it at the new position, and goes to the top of the loop.

The short loop in lines 350-430 shows the bike flying upward off the ramp (The angle of flight depends on speed).

Lines 440-490 make the bike descend (Line 480 determines if the bike has landed and whether or not the jump is successful).

If you are still alive, line 500 sends the program to the victory routine.

Lines 510-560 prepare the screen for the crash.

Lines 570-640 are the crash loop that makes your motorbike go in circles.

Lines 650-670 draw the bike resting upside down on the ground.

Line 680 returns to the beginning of the program so you can try again.

Lines 690-710 prepare the screen and print the victory message.

The victory routine in lines 720-770 shows your motorcycle triumphantly riding a wheelie off the screen.

Shape Table.

I was able to use eight different rotations for my shapes even though page 99 of the Applesoft Reference Manual states that when the SCALE=1 only four are available.

Entering the Program

Soaring Cycles contains two parts which must be entered, the Applesoft Basic program and the shape table. After entering the Basic program, simply type SAVE SOARING CYCLES. Now, go into the system monitor (using CALL-151) and program in the shape table. When you are finished, just type BSAVE BIKE, A\$5600, L\$60.

Now strap on your crash helmet, put on your riding gloves, and run the program. □

PrintMate™ 150

THE MOST ADVANCED PRINTER IN ITS CLASS.

Easy-to-use. Fast. Excellent print quality.

These are the features every pc and microsystem user wants. These are the same features we build into every PrintMate 150. And there's one more thing... value. No other printer offers more versatility for the price. At \$995, the wide-carriage PrintMate 150 is an exceptional value.

HIGH SYSTEM THRUPUT

Print at 150 cps. Advanced logic-seeking impact printing. Accelerated print head slew rate. High-speed paper advance.

PRINT CAPABILITIES

10, 12, 15 or 17 characters per inch. High-density, high-speed correspondence printing, plus double-wide for emphasis.

SoftSwitch™ KEYPAD

Establish, change or display the

operating mode from the front of the printer.

EXPANDABLE PRINT BUFFER

Increase performance with buffers that take you from 2K to 68K to provide high-speed interleaved printing with computing.

EASY WITH PAPER

Three paper paths—front, back or bottom—make the PrintMate 150 one very easy-to-use machine.

DOWNLINE LOADABLE FONTS

Custom character sets may be downloaded to a PrintMate 150 with a 4K or larger buffer.

PRINT WITH STYLE

No other printer offers more graphics support for the price. It's true. Our exclusive AP-PAK™, available for most popular computers, lets you print in dozens of stylized fonts, in characters up to

5/8" high. Got a graph on the screen? Need a custom font or logo? Do it with an AP-PAK.

OUR BOTTOM LINE

Superior performance starts at \$995 on a PrintMate 150. We wouldn't print that if we didn't mean it. Call or write us today.
1-800-821-8848

OEM's: Ask us about custom AP-PAKs and low-cost private labeling.

World Builder: A Modest Program for Designing Strange New Worlds

Poluxxy Araxxanas raised his head and looked at the dismembered corpse of his foe with nictitating eyes. He clacked the chitin of his mouth opening and raised his four arms to the huge red sun. The sound tied in his throat uncarried by the thin air. On this cold day, victory was his. And the taste of it was bitter.

That is what computers and science fiction are about.

Both computers and science fiction offer the possibility of exploring worlds and futures that could never be explored in reality. Or which would be instantly

Stephen Kimmel

fatal if you could. Anyone who uses the computer strictly as a means of freeing valuable time to work more efficiently is missing part of what computers can do. World Builder for the TRS-80 is designed to help bridge the gap and perhaps enrich both science fiction and computers.

Why a World Builder?

As a science fiction writer, I have an obligation to my readers to design consistent, believable worlds. This can be a tedious process. There is always the

temptation simply to change the color of chlorophyll from green to blue and let it go at that. Giving into temptation results in weaker science fiction so I designed World Builder to help out. After seeing two recent articles in *Creative* dealing with astronomy, I decided to modify it for general use.

World Builder is of interest even to those who don't read science fiction. It has possibilities for use as an educational science program. Consider it a game, if nothing else. Your first goal is to design a planet on which life can occur. That is hard enough. The second goal is even harder: create a world that could be inhabited by humans. You will

OBITUARY

PROFESSOR HERMAN Q. HEMMERDINGER

...Professor Herman Q. Hemmerdinger, a brilliant mind and a man of great courage, passed away on... (The rest of the obituary text is illegible.)

Dear cousin:

Alas, for when you read this letter you shall know—perish the thought—that I have perished! You see, my bar-
rister holds instructions to forward this letter ONLY IN
THE EVENT OF MY UNFORTUNATE DEMISE!

Years ago, during my worldly travels, I chanced upon a
treasure map suggesting huge wealth buried on a little-
known tropic isle. Naturally, I pursued it, forthwith and
to wit, fully suspecting certain unspeakable dangers
inherent to the task. Unfortunately, they proved to be
dangers so vile, so terrible, so incredible, that no human
being should ever be forced to face. Yet, I faced this
force of evil and, as you may realize upon receipt of these
words, have indeed succumbed in the attempt.

Though I may have failed, the challenge is passed along
to you! So accept the torch. Go! Seek it out, to wit and
forthwith. But hark, I warn you—stay alert, be ever on
your guard, and beware for your very life! Because each
step of the way you will face DEATH IN THE CARIBBEAN.

Your loving cousin,

Professor Herman Q. Hemmerdinger

find that the parameters for life in general and humanity in particular are tight.

Most of what follows is rather technical. I won't be upset if you wish to skip it. I will, however, suggest that you read *Planets for Man* by Stephen Dole and Isaac Asimov. It is easy reading and fun. Much of this program is based on that book and on *How to Build a Planet* by Poul Anderson.

In the Beginning There Was Light

We begin with a star. The sun of any planetary system is the great thermonuclear engine that drives the system. Everything else depends on it. The star may be so large that its formation consumed all the nearby matter. If that is the case, then there can be no planets. Another possibility is that the star is so small that its gravity won't hold a planet of any appreciable size. Again, our quest for a habitable planet has come to a quick end. When the star dies, it will almost certainly destroy any planet close enough to support life. Therefore we can't have too old a star. The larger stars

come to this end at an early age and in a most spectacular way—the super nova.

World Builder has two built-in assumptions concerning the star. First, the program assumes that the star is on the "main sequence" of the Hertzsprung-Russell diagram (a plot of spectral classes vs. the absolute magnitude or luminosity of stars). The 1% of all stars that don't fall on the main sequence are stars being born, which certainly won't have evolved life; stars that are dying, which have destroyed any life that might have evolved; and a few odd stars that we can probably ignore safely. The vast majority of stars settle into a position on the sequence according to their mass and spend most of their lives there. These are the stars that have the potential to host life.

The second assumption in World Builder is that the star either is not a binary star or can be treated as a single star. If the two stars of a binary are close enough, the planet can orbit both of

them at once in what will probably be a highly eccentric orbit. Life may be possible, although the planet probably won't be habitable by people due to the extreme seasonal temperature variation. If the binary stars are far enough apart, then the planet could orbit one while feeling little impact from the other.

Consider what life on earth would be like if, instead of having Pluto, we had a small star. Pluto receives so little energy from the sun that its surface temperature is just a few degrees above absolute zero. Likewise, our second star would contribute little energy to us. The result would be a more eccentric orbit and a light in the sky brighter than anything but the sun and the moon. The main effect would be on our mythologies.

World Builder contains data on 36 stars including 17 nearby stars felt to have a reasonable chance (greater than 1% but never more than 6%) of having inhabited planets. The rest of the stars

Learn how to Program and Use PERSONAL COMPUTERS

Now at Home in Spare Time, you can learn everything you always wanted to know about personal computers. How to program in BASIC. How to understand and use more than 80 BASIC commands and functions. How to write and run your own programs... for both personal and business applications. How to use pre-packaged software and change it to meet your special needs. How to make sense of the overwhelming maze of books, information and advice available at your local computer store.

More Than Just A Computer Manual

This is more than just another programming manual...it's an entire comprehensive course written by experts. Yet, because it was especially developed for home study, you learn everything right in your own home, without changing your job or lifestyle, without attending a single class.

Plus You Get Your Own Computer
To give you practical hands-on experience, this course includes your own personal computer—the Timex 1000 with 16K memory module—plus a cassette recorder that lets you save your programs on tape. **Get all the facts. MAIL COUPON TODAY!**

World Builder, continued...

on the list are well known. The complete list includes most of the brightest stars and a few that can't be seen with the unaided eye.

Most of the stars are on the main sequence illustrated in Figure 1. The most significant exceptions are the giants, Rigel, Deneb, Betelgeuse, Antares, Capella, Aldebaran, Arcturus, and Pollux. Obviously this doesn't begin to exhaust the eighty gajillion stars, so the program has the option of using stars not on the list. To use a star not on the list requires the use of either the spectral class of the star or its absolute magnitude.

The Business of Designing a Planet

Once we have settled on a star, we can get down to some of the more immediate matters. Planets come in all sizes and locations. Our own solar system has an interesting assortment of them. It should be said that the science isn't precise. Much of what this program does is speculation and approximation. We have only visited four bodies that could be considered planets. The others we have either studied from Earth or from "close-ups" of several thousand miles. At the range of some of these close-ups, we might be able to resolve objects as small as New Jersey. There would be uncertainty about whether Earth was inhabited by intelligent beings. Come to think of it, I know some people who have the same doubts about Oklahoma.

After settling on a star, the most important discretionary item available to us as planet builders is the average temperature of the planet. Temperature is probably the single most important factor in determining habitability. It also sets the approximate radius of the orbit of the planet about its sun. That, in turn, determines the length of the planet year, and how big the star will appear from the planet.

The size and location of any moons and the sun will determine how rapidly the planet rotates. We have a 24-hour day because the tidal forces of our moon have slowed the Earth down to that point. Jupiter, whose moons are much smaller in relation to it than our moon is to us, has a day that is less than 10 hours long. Jupiter is also much farther from the sun, so its tidal forces have little effect.

The rotation of Venus, despite its having no moon, has been essentially stopped by tidal forces caused by the sun. The importance of this to the temperature of the planet is great. The dark side of Mercury gets down to -380°F , while the temperature on the sun side gets over 600°F . A planet with a shorter day will have smaller variations in its high and low temperature.

The tilt of the planet on its axis also

Figure 1. The Hertzsprung-Russell Diagram.

has a profound impact on the temperature of the planet. As every school child knows, winter occurs when the portion of the Earth we happen to be on is tilted away from the sun. Earth has an axis tilt of nearly 24 degrees. If the tilt were less, then summer and winter would be more alike. A greater tilt would make a hotter summer and a colder winter.

The final factor contributing to the temperature profile of the planet is its orbital eccentricity. Planets do not travel in perfect circles but in ellipses. Eccentricity is a measure of the deviation from a perfect circle. It determines the perihelion (the point of closest approach to the star) and aphelion (the point of greatest distance from the star). The closer the planet is to the star the warmer it is; the further away, the colder.

On Earth, which has a small eccentricity, the variation is a few degrees. Summers are slightly warmer and winters slightly colder south of the equator. If we had an eccentricity as high as that of Pluto, the difference would be substantial.

The gravity of the planet is the last important characteristic that we are free to set. This contributes significantly to determining the nature of the atmosphere and the nature of life on the planet. If there is life on Jupiter, and some scientists are serious about the possibility, then it certainly won't look human. And it won't be able to survive on Earth.

Gravity directly affects the makeup of the atmosphere. If the gravity is too high, the planet won't lose its primordial hydrogen; it will be a gas giant. If the gravity is too low, the planet won't be able to hold onto its oxygen in gaseous form. The result is a planet with an extremely thin atmosphere similar to that found on the moon and on Mars.

World Builder does not consider the chemical composition of the atmosphere, and that is probably a major weakness of the program. World Builder would predict for Venus an atmosphere slightly thinner than that of Earth. That is not the case. Venus has a massive atmosphere with a composition radically different from Earth's, due in part at least to high concentrations of carbon di-

AARDVARK — THE ADVENTURE PLACE

TRS-80 COLOR COMMODORE 24 VIC-20 SINCLAIR/TIMEX TI99

WE CARRY MORE THAN ADVENTURES!!

MAXI-PROS WORD PROCESSING NEW

The easiest to use word processor that I know of. Has all the features of a major word processor (right and left margin justification, page numbering, global and line editing, single, double, triple spacing, text centering, etc.) at a very cheap price because we wrote it in BASIC. Includes 40 page manual and learning guide. Easily modified to handle almost any printer combination. Available on disk or tape for VIC20, COMMODORE64, and TRS-80 COLOR computer. Requires 13k RAM on Vic, 16k EXTENDED on TRS-80 COLOR. \$19.95 on tape \$24.95 on disk.

GENERAL LEDGER — Complete bookkeeping for a small business. Disk required. For Vic20 (13k), Commodore64, TRS-80 COLOR (16k EXTENDED). \$69.95 (Send \$1.00 for manual before ordering.)

LABYRINTH — 16K EXTENDED COLOR BASIC — With amazing 3D graphics, you fight your way through a maze facing real time monsters. The graphics are real enough to cause claustrophobia.

Similar game for Timex/Sinclair 16k - hunting treasure instead of monsters \$14.95.

ADVENTURE WRITING/DEATHSHIP by Rodger Olsen — This is a data sheet showing how we do it. It is about 14 pages of detailed instructions how to write your own adventures. It contains the entire text of Deathship. Data sheet - \$3.95. NOTE: Owners of TI99, TRS-80, TRS-80 Color, and Vic 20 computers can also get Deathship on tape for an additional \$5.00.

Dealers—We have the best deal going for you. Good discounts, exchange programs, and factory support. Send for Dealer Information.

Authors—Aardvark pays the highest commissions in the industry and gives programs the widest possible advertising coverage. Send a Self Addressed Stamped Envelope for our Authors Information Package.

ADVENTURES — Adventures are a unique form of computer game. They let you spend 30 to 70 hours exploring and conquering a world you have never seen before. There is little or no luck in Adventuring. The rewards are for creative thinking, courage, and wise gambling — not fast reflexes.

In Adventuring, the computer speaks and listens to plain English. No prior knowledge of computers, special controls, or games is required so everyone enjoys them—even people who do not like computers.

Except for Quest, itself unique among Adventure games, Adventures are non-graphic. Adventures are more like a novel than a comic book or arcade game. It is like reading a particular exciting book where you are the main character.

All of the Adventures in this ad are in Basic. They are full featured, fully plotted adventures that will take a minimum of thirty hours (in several sittings) to play.

Adventuring requires 16k on Sinclair, TRS-80, and TRS-80 Color. They require 8k on OSI and 13k on VIC-20. Sinclair requires extended BASIC. Now available for TI99.

TREK ADVENTURE by Bob Retelle — This one takes place aboard a familiar starship and is a must for trekkies. The problem is a familiar one — The ship is in a "decaying orbit" (the Captain never could learn to park!) and the engines are out (You would think that in all those years, they would have learned to build some that didn't die once a week). Your options are to start the engine, save the ship, get off the ship, or die. Good Luck.

Authors note to players — I wrote this one with a concordance in hand. It is very accurate — and a lot of fun. It was nice to wander around the ship instead of watching it on T.V.

DERELICT by Rodger Olsen and Bob Anderson — For Wealth and Glory, you have to ransack a thousand year old space ship. You'll have to learn to speak their language and operate the machinery they left behind. The hardest problem of all is to live through it.

Authors note to players — This adventure is the new winner in the "Toughest Adventure at Aardvark Sweepstakes". Our most difficult problem in writing the adventure was to keep it logical and realistic. There are no irrational traps and sudden senseless deaths in Derelict. This ship was designed to be perfectly safe for its' builders. It just happens to be deadly to alien invaders like you.

Dungeons of Death — Just for the 16k TRS-80 COLOR, this is the first D&D type game good enough to qualify at Aardvark. This is serious D&D that allows 1 to 6 players to go on a Dragon Hunting, Monster Killing, Dungeon Exploring Quest. Played on an on-screen map, you get a choice of race and character (Human, Dwarf, Soldier, Wizard, etc.), a chance to grow from game to game, and a 15 page manual. At the normal price for an Adventure (\$14.95 tape, \$19.95 disk), this is a giveaway.

PYRAMID by Rodger Olsen — This is one of our toughest Adventures. Average time through the Pyramid is 50 to 70 hours. The old boys who built this Pyramid did not mean for it to be ransacked by people like you.

Authors note to players — This is a very entertaining and very tough adventure. I left clues everywhere but came up with some ingenious problems. This one has captivated people so much that I get calls daily from as far away as New Zealand and France from bleary eyed people who are stuck in the Pyramid and desperate for more clues.

MARS by Rodger Olsen — Your ship crashed on the Red Planet and you have to get home. You will have to explore a Martian city, repair your ship and deal with possibly hostile aliens to get home again.

Authors note to players — This is highly recommended as a first adventure. It is in no way simple—playing time normally runs from 30 to 50 hours — but it is constructed in a more "open" manner to let you try out adventuring and get used to the game before you hit the really tough problems.

QUEST by Bob Retelle and Rodger Olsen — THIS IS DIFFERENT FROM ALL THE OTHER GAMES OF ADVENTURE!!!! It is played on a computer generated map of Alesia. You lead a small band of adventurers on a mission to conquer the Citadel of Moorlock. You have to build an army and then arm and feed them by combat, bargaining, exploration of ruins and temples, and outright banditry. The game takes 2 to 5 hours to play and is different each time. The TRS-80 Color version has nice visual effects and sound. Not available on OSI. This is the most popular game we have ever published.

32K TRS-80 COLOR Version \$24.95.

Adds a second level with dungeons and more Questing.

PRICE AND AVAILABILITY:

All adventures are \$14.95 on tape. Disk versions are available on VIC/COMMODORE and TRS-80 Color for \$2.00 additional. \$2.00 shipping charge on each order.

Please specify system on all orders

ALSO FROM AARDVARK — This is only a partial list of what we carry. We have a lot of other games (particularly for the TRS-80 Color and OSI), business programs, blank tapes and disks and hardware. Send \$1.00 for our complete catalog.

World Builder, continued...

oxide. In defense of World Builder it must be said that Venus could be terraformed into retaining an Earth-like atmosphere.

The Question of Life

For purposes of this program, I assume that life is a carbon-based chemistry that requires liquid water in its environment. There are several other possibilities although we currently have no proof that any of them exist. Perhaps the most likely are those which don't require liquid water, either converting ice or water vapor to water in their bodies. However, I don't see how such life could evolve without a period of liquid water on the planet.

There are four requirements for life in the restricted context of this program. There must be liquid water at least some of the time. The atmosphere must contain some oxygen. The star must not have died. And there must be enough time for life to evolve.

What will that life be like? That is the question. To some extent, we expect it to look familiar. Function pushes evolution along the same lines. Thus dolphins, goldfish and sharks have similar form despite having radically different heritages. A classic example is bats and birds. We should be able to recognize fish and birds as such no matter what planet they come from.

Land creatures offer a much wider range of variation. No one can say that every possible combination has been tried on Earth. Some other arrangements might be highly successful in other environments. Still we should be able to recognize eyes, legs and mouths. Hands may be a different story, although our design should work in almost any environment.

Gravity is the primary factor affecting life that is dealt with in World Builder. High gravity makes it harder to stand up. Anything that isn't hugging the ground will be more heavily reinforced than it would be on Earth. Bodies and trees will be thicker and shorter. Rising up on two legs may be impossible.

Low gravity would have the opposite effect. With less pull to overcome, rising on two legs is easier. Creatures need less reinforcement to overcome gravity. The air should be thinner, reducing the effect of the wind and the ability to carry sounds. Beings in a thick, high gravity atmosphere would place a premium on a streamlined form. Creatures in a low gravity, thin atmosphere won't consider this such an advantage.

And humans? Will they be able to live on the planet? I have taken the restrictions to be those shown in Figure 2. One requirement is for other life. Without an existing biosphere with all its delicate

balances and support systems, we would be living in an artificial environment. Without photosynthesis to regenerate oxygen, we would have to generate it ourselves. Again, there is little point in leaving the relative comfort and safety of our space craft if we must rebuild it on the surface of the planet. Of course, you might terraform an otherwise uninhabitable planet, but that is a matter beyond the scope of this program.

Thoughts on Earth

At first glance, Earth appears to have a unique position in the cosmos. You couldn't adjust the parameters of World Builder too much without making it uninhabitable. This really doesn't come as a surprise. Of the four bodies we have visited, Earth, Mars, Venus, and the moon, only Earth has what is unquestionably life.

There probably is no life anywhere else in our solar system. The only other candidates are long shots. Isolated pockets on Mars and the clouds of Jupiter don't seem particularly promising and

Saturn's moon, Titan, is only slightly better. If the assumptions of this program are correct, we have no better than a fifty-fifty chance of finding a habitable planet within 25 light years of Earth.

Earth is the nearly perfect home for humanity but not because it was created that way. Humanity was created, by whatever means, to be perfectly at home on Earth. We grew up here. We wouldn't expect to do any better on most other planets than we would expect a sparrow to do under water. If we had grown up on Titan, a -200°F methane pool would seem perfect for a hot summer's swim.

Is Earth the sole harbor of life in the black sea of space? I can't believe that it is. There are billions and billions of stars (sorry, Carl) out there and at least an equal number of planets. If there is no life anywhere else in the universe then that is a waste unparalleled by anything in creation. The probability that Earth is the exclusive home for life is well over a billion to one. It might be, but I wouldn't bet on it. □

Our books simplify yours!

Great Plains Software shows you how to appraise your business from every angle. Our books handle your accounting in expert fashion. They analyze your management policies and evaluate the profitability of your decisions. And our books give you the reports you need – so you can see where your business is making profits – and losing them, whether it's by salesman, product, territory or profit center.

Our new version of the Hardisk Accounting Series includes General Ledger, Accounts Receivable, Accounts Payable and two new modules – Payroll and Inventory with Point of Sale. Our programs are fast, powerful and efficient. Our books make it easy to operate and understand.

You can find Great Plains Software at your local computer store – or call us for more details. We'll be glad to show you how the Hardisk Accounting Series can simplify your books.

TIMEX SINCLAIR USERS...

The Gateway Guide to the ZX81 and ZX80

Revised Edition

By Mark Charlton

This helpful book has more than 70 fully documented programs for the ZX80, ZX81 and Timex Sinclair 1000. If you're just learning about computing, *The Gateway Guide* will help you grasp the basics of programming your computer.

The book starts with a look at each function and statement in ZX BASIC, and explains how it works with a demonstration program. Game programs, graphics programs and increasingly sophisticated programs are given as you progress... until you've become extremely well-versed with your computer and what you can do with it.

A special section is included on using the ZX80, ZX81 and Timex Sinclair 1000 in the classroom, showing how programs can be built around commonly-used formulae to teach problem-solving.

Appendices cover memory used, ZX BASIC commands, machine specifications, hex dump, graphic symbols and codes, conversions, the ZX81 hexadecimal chart, documentation and overheating problems.

Softcover, 5 1/2" x 8 1/2", illustrated. \$9.95.

valFORTH™ for Atari* 400/800
Professional Software for the Hobbyist

FORTH has been used for years by ATARI* and others in programming their arcade games. FORTH is fast, 15-20 times faster than BASIC, and can make use of every capability for your computer. And it's no longer the province of the professional programmer! With valFORTH and the additional packages described below, you can create programs in an afternoon that would previously have taken weeks of hard work!

WHAT? YOU DON'T ALREADY KNOW FORTH?

Then take advantage of our special offer on *Starting FORTH* by Leo Brodie. Widely acclaimed as the best book available on the subject, this entertaining treatment of FORTH will make you comfortable with this exciting language quickly and easily. When you order *Starting FORTH*, you get a free copy of our "Notes for the valFORTH User," including references, by page, to *Starting FORTH*.

These are the utilities developed by Valpar International's software specialists and used to create our commercial software products.

valDOS NEW! By Popular Demand!

valDOS. Now you can use your valFORTH system to read and write normal Atari DOS Files created with valDOS or other sources. Also includes valDOS File Editor for creating and reading FORTH Source Code without "screens." (Not a general file editor.)

(Over 25 pages of documentation. Requires valFORTH.)

valFORTH™

Package contains: fig-FORTH kernel with mathematical and stack operations machine-coded for higher speed than normal fig-FORTH; line editor AND screen editor, debugger, sound and graphics commands, floating point, advanced 6502 assembler, diskcopiers, and much more! (Over 110 pages of documentation)

GENERAL UTILITIES AND VIDEO EDITOR

Utilities: 4 array types, 4 case types, text on graphics 8, extensive string manipulation and keyboard input, STICK & PADDLE, randoms, bit manipulation, and much, much more.

Editor: fast, powerful, complete valFORTH screen editor 1.1. A professional-quality tool that makes editing a pleasure.

(Over 60 pages of documentation. Requires valFORTH.)

PLAYER-MISSILE GRAPHICS, CHARACTER EDITOR, & SOUND EDITOR

Player-Missile: Create, move, color, change images of and bound players and missiles with high level commands. Full support of 5th player, multicolor players, etc. etc. All critical sections in machine code.

Character Editor: Compose character sets with joystick. Simultaneous display of created characters. Make images for players and missiles.

Sound Editor: Simple independent control of all four voices (one joystick per voice) and audio-control register. Create any single-setting sound with graphical and tabular readout.

(Over 35 pages of documentation. Requires valFORTH.)

VALPAR INTERNATIONAL

Call Toll-Free 800-528-7070 In Arizona call (602) 790-7141

VALPAR INTERNATIONAL

Coming Attractions:

- * TARGET COMPILER
- * 3D WORLD

For more information fast and a 4TH ♥ IF HONK THEN bumpersticker, send 25¢ and a self-addressed, stamped envelope.

DISPLAY FORMATTER

Fast, simple creation of all types of display lists, with automatic 4K boundary jumping. Automatic or user controlled memory allocation, and formatting for horizontal and vertical scrolling, and display list interrupts.

(Over 30 pages of documentation. Requires valFORTH.)

TURTLE & valGRAPHICS, AND ADVANCED FLOATING POINT ROUTINES

All graphics modes supported — even GTIA and "7+ ". Draw and fill commands faster and smarter than Basic. "Turn-toward" for "chasing" and vanishing point effects; point labeling, etc. Also SIN, COS, ATN, ATN2, etc. added to floating point.

(Over 35 pages of documentation. Requires valFORTH.)

Text Compression and Auto Text Formatting

A unique, two-part utility!

- Text Compression allows the packing of text into much less space than normally required. Useful for wordy Adventure games, "artificial intelligence," etc.!
- Auto Text Formatting takes both normal and compressed text and routes it to the video screen "windows."

(Over 20 pages of documentation. Requires valFORTH.)

valFORTH alone requires 24K
valFORTH plus one or more packages requires 32K minimum
Memory requirements include 10-12K working space
All products are now on non-protected disks
Over 350 pages of detailed documentation!

APPLE®, ATARI® and TRS-80® OWNERS!

Three fantastic books from *Creative Computing...*

THE CREATIVE APPLE

The best articles and features on the Apple to appear in the past four years of *Creative Computing* are gathered together in this interesting and entertaining book. Revised and updated to include the latest information, this wealth of material gives you dozens of ways to tap the tremendous potential of your Apple. Contents range from graphics, music and educational applications to word processing, software reviews, games and tips on easier programming. Whatever you use your Apple for, you'll find plenty here to help you get more out of it than you ever imagined possible.

The Creative Apple, edited by Mark Pelczarski and Joe Tate. 8 1/2" x 11", softcover, illustrated. \$15.95.

THE CREATIVE ATARI

Whether you're an Atari beginner or seasoned expert, you really shouldn't be without this extraordinarily useful guide to practical Atari "how to" and lore. You get tutorials on Atari graphics, a discussion of Atari memory concepts, programming tips, programs and much more that will help you make better use of your Atari. It's written so the average, non-expert user who knows a little about BASIC and simple programming can easily develop into a skilled Atari user. The contents have appeared as articles, columns

and tutorials in *Creative Computing*, but have been thoroughly revised and updated to insure maximum learning ease.

The Creative Atari, edited by David Small, Sandy Small and George Blank. 8 1/2" x 11", softcover, illustrated. \$15.95.

THE CREATIVE TRS-80

Here's a complete guide to everything you can do with your TRS-80 and how to do it better, faster and more expertly: games, graphics, educational applications, business applications, programming aids, music and a review of handy hardware and peripherals.

Whether you're interested in expense management or educational techniques, symphonies or color composition, this valuable volume will enable you to use your TRS-80 for more exciting and satisfying computing almost immediately.

The Creative TRS-80, edited by Ken Mazur. 8 1/2" x 11", softcover, illustrated. \$15.95.

Registered Trademarks: Apple: Apple Computer, Inc.; Atari: Atari, Inc.; TRS-80: Radio Shack division of Tandy Corp.

I KNOW THE FOLLOWING STARS

SOL	HR 7703	ACHERNAR
ALPHA CENTURI A	DELTA PAVONIS	ALTAIR
ALPHA CENTURI B	82 ERIDANI	BETELGEUSE
EPSILON ERIDANI	BETA HYDRI	ALDEBARAN
TAU CETI	HR 8832	SPICA
70 OPHIUCHI A	SIRIUS	ANTARES
70 OPHIUCHI B	CANOPUS	POLLUX
ETA CASSIOPEIAE A	VEGA	FOMALHAUT
ETA CASSIOPEIAE B	ARCTURUS	BETA CRUCIS
SIGMA DRACONIS	RIGEL	DENEK
36 OPHIUCHI A	CAPELLA	REGULUS
36 OPHIUCHI B	PROCYON	BARNARD'S STAR

WHICH STAR SHOULD I USE? TAU CETI_

STELLAR DATA

THE SELECTED STAR, TAU CETI, IS A G 8 STAR
IS ORANGE

HAS A MASS OF .82 TIMES THAT OF THE SUN

IT IS .499285 TIMES AS BRIGHT AS THE SUN

THE STAR HAS AN EXPECTED LIFESPAN OF 16.4235 BILLION YEARS

OF WHICH IT HAS LIVED 50.0001 % OR ABOUT 8.21175 BILLION YEARS.

IT HAS A SURFACE TEMPERATURE OF 5597.4 DEGREES KELVIN

AND MAY HAVE PLANETS

THIS STAR WILL DIE AS A WHITE DWARF

ANOTHER STAR? NO_

THE MAIN PLANET OF INTEREST

THE EARTH HAS AN AVERAGE SURFACE TEMPERATURE OF 60 DEGREES

WHAT SURFACE TEMPERATURE WOULD YOU LIKE? 50

DESIRED SURFACE GRAVITY (EARTH=1)? .85

HOW BIG SHOULD THE PLANET BE RELATIVE TO EARTH? .75

PEK

EARTH'S ORBIT HAS AN ECCENTRICITY OF .01672
 WHAT IS THE ORBITAL ECCENTRICITY (<1)? .02
 HOW DOES THE AXIS TILT (EARTH=23.5 DEGREES)? 10
 HOW MANY MOONS DOES THE PLANET HAVE? 2
 MASS OF MOON # 1 (OUR MOON=1)? .5
 ORBIT (OUR MOON=30)? 20
 MASS OF MOON # 2 (OUR MOON=1)? .2
 ORBIT (OUR MOON=30)? 40_

THIS PLANET'S DAY SHOULD BE ABOUT 27.1068 HOURS LONG.
 THAT MAKES ITS YEAR 224.842 DAYS LONG. WITH A TILT OF 10
 TODAY'S HIGH TEMPERATURE SHOULD BE 64.4005 DEGREES F.
 TONIGHT'S EXPECTED LOW IS 35.5995 DEGREES F.
 THIS SUMMER WE EXPECT IT TO GET UP TO 84.1681
 THIS WINTER IT SHOULD DROP DOWN TO 17.3373

YOUR SELECTED SYSTEM OF MOONS
 ORBIT MASS PERIOD
 20 .5 517.41 HOURS 19.0878 DAYS
 40 .2 1463.45 HOURS 53.9886 DAYS
 WANT A DIFFERENT SET OF MOONS? NO_

PLANETARY DATA
 OUR PRINCIPAL PLANET OF INTEREST HAS AN AVERAGE SURFACE
 TEMPERATURE OF 50 DEGREES F. THIS REQUIRES AN ORBIT
 OF .734582 ASTRONOMICAL UNITS (68.3162 MILLION MILES)
 CLOSEST APPROACH = .719891 AU: GREATEST DISTANCE = .749274 AU
 THIS ALSO MEANS IT HAS A YEAR THAT IS .695271 YEARS LONG
 THE STAR APPEARS LARGER THAN OUR SUN.
 SINCE OUR PLANET HAS A GRAVITY LESS THAN EARTH'S WE EXPECT
 A THINNER ATMOSPHERE. THERE IS LESS TECTONIC ACTION AND LESS
 RESISTANCE. THUS WE EXPECT FEWER MOUNTAINS BUT THEY MAY BE MUCH
 TALLER. EARTHQUAKES, IF ANY, WILL BE LESS SEVERE.
 A GRAVITY OF .85 MEANS THAT IF YOU WEIGH 200 POUNDS
 YOU WOULD WEIGH 170 ON OUR PLANET
 WOULD YOU LIKE A NEW GRAVITY? NO_

LIFE ???
 THERE MAY BE SOME MAJOR LAND ANIMALS AND PERHAPS INTELLIGENCE
 LOWER GRAVITY MEANS A THINNER ATMOSPHERE. BIRDS, IF ANY, WILL
 HAVE LARGER WINGS. ALL LIFE FORMS SHOULD BE TALLER AND MORE
 SLENDER THAN ON EARTH.
 IT THERE PROBABLY ARE MANY TWO LEGGED ANIMALS.
 THE THIN ATMOSPHERE HURTS SOUND TRANSMISSION SO ANIMALS WILL
 EITHER HAVE LARGE EARS OR NONE. LUNGS WILL BE MUCH LARGER.
 SOME FORM OF RADIATION PROTECTION WILL BE NECESSARY.
 THIS PLANET MIGHT BE CONSIDERED HABITABLE BY MAN.
 WANT ANOTHER PLANET? NO_

OUR SOLAR SYSTEM IS LAID OUT LIKE THIS:

PLANET	MASS	DISTANCE FROM SUN
MERCURY	.055	.387
VENUS	.815	.723
EARTH	1.0	1.0
MARS	.108	1.524
JUPITER	317.9	5.203
SATURN	95.2	9.539
URANUS	14.6	19.18
NEPTUNE	17.2	30.06
PLUTO	.100	39.44

MASS FOR PLANET # 2 ? 2000
 A BODY THIS LARGE WOULD BECOME A STAR.
 MASS FOR PLANET # 2 ? 400
 DISTANCE FROM STAR? 4_

PLANET #	MASS	ORBIT
1	.8	.5
2	.478125	.734582 LIFE?
3	.45	.9 LIFE?
4	10	40

WOULD YOU LIKE TO TRY ANOTHER SYSTEM? NO
 WOULD YOU LIKE TO TRY ANOTHER STAR? NO
 READY

The computer-age storybook for kids!

Katie and the Computer

By Fred D'Ignazio
 Illustrated by Stan Gilliam

This wonderful storybook teaches young children how a microcomputer works. Katie ends up inside her dad's new micro...and has an adventure with Colonel Byte and the other characters who make a computer work. Her journey follows the path of a computer command; her experiences are technically accurate yet easily understandable, right down to her encounters with a program bug. Additional material is included to help you relate the story to actual working parts of the computer. With truly exceptional color illustrations, this is an excellent first computer book for youngsters.

Hardcover, 11" x 8 1/2", illustrated.

In this article I discuss my Sine Power program. This routine is similar in structure to the polar coordinate programs I have presented in recent issues of *Creative Computing*. The radius is computed as the weighted sum of powers of sinusoids, or as a root of the absolute value of the weighted sum (depending on the values selected for parameters U and P).

Joe Jacobson, 675 E. Street Road, Apt. 1009, Warminster, PA 18974

Joe Jacobson

The use of powers of sinusoids was suggested by a fellow computer artist and co-worker, Joel Wexler, and is also a natural extension of the Sine Product program (*Creative Computing*, May 1983). As in the Sine Product program, Sine Power incorporates automatic scaling.

The program prompts the user to en-

ter certain input parameters from the keyboard. The parameters M and N are exponents (powers) of the sinusoids. K and L are angular frequency coefficients in the arguments of the sinusoids. S and T are amplitude weights of the sinusoidal terms. Q is the exponent of the absolute value; if Q has a value between 0 and 1, the result is a root. D is the increment in radius between successive angular sweeps. G is the increment in angle within a sweep.

If you want a list of input parameter values at the bottom of the picture, set

SINE POWER PROGRAM PARAMETERS"

Table 1. Suggested Parameter Values.

Parameter	Range of Values	
	From	To
U*	1	2
P*	1	2
S	-∞	+∞
K	6	60
M**	1	+∞
T	-∞	+∞
L	6	60
N**	1	+∞
Q	0	1
D	30	50
G***	5	15
T1*	1	2

* U, P, and T1 must each be either 1 or 2.

** M and N must be positive integers or 0.

*** G must be +2.4 or greater.

T1 equal to 1. After the plot is complete, with the parameter list, clear the screen and hit RETURN. You will get a "clean" plot (without the parameter list). If you don't want a parameter list at all, set T1 equal to 2.

Table 1 lists ranges of values that seem to give good results. Some values outside these intervals may also work well.

In a future issue of *Creative Computing* I will describe a completely different type of polar coordinate computer art program. □

Rabbits and Foxes:

Biological Population Cycles

A very simple model of population oscillations in host-parasite or prey-predator systems was developed by Lotka and Volterra in the 1920s, and is still useful today. A good reference to the mathematical background is G. Murdie's article on "Population Models" (chapter 8 of J.G. Andrews and R.R. McLone *Mathematical Modelling*, Butterworths, Inc., Boston, 1976).

A very simple program (in Applesoft Basic) for demonstrating this model is presented here. It illustrates how very elementary programming may sometimes be used in dealing with sophisticated scientific ideas.

The Lotka-Volterra model may be visualized as follows. I am using the rabbits-and-foxes prey-predator system as an example.

Here, A represents the (constant) food supply of the rabbits whose population (X) increases in the first step. The foxes prey on the rabbits to increase the fox population (Y) in step two. Finally, when the rabbit population has been reduced sufficiently, and the foxes (which are assumed to eat only rabbits) have become too numerous, the foxes begin to die off in step three for lack of food. This makes it possible for the rabbit population to begin increasing again via step one. The whole population cycles, then repeats itself.

Although this model is somewhat simplified (we ignore the effect of weather

C.J.G. Raw

on the rabbits' food supply, and we assume foxes live only on rabbits), it is still widely used as a basis for the study of fluctuating populations in prey-predator or host-parasite systems.

The Lotka-Volterra differential equations express the time rate of increase of the populations X and Y (rabbits and foxes, respectively). It is not the purpose here to explain differential equations, but I list them below for the calculus experts:

$$(DX/DT) = (K1 - K2*Y)*X$$

$$(DY/DT) = (K2*X - K3)*Y$$

In these equations, K1 represents the intrinsic rate of increase of rabbits which is diminished in the first equation by a term proportional to the number of foxes (K2*Y). DX represents the increase in rabbit population in the very small time interval DT, with a similar interpretation of DY.

In the second equation above, the rate of increase of foxes is proportional to the rabbit population (K2*X) diminished by the death rate (K3) of foxes. Both rates are proportional overall to the parent populations (X and Y themselves).

Note that in the absence of foxes, Y=0, the rabbit population grows exponentially:

$$DX/DT = K1*X$$

which integrates to (again for the calculus experts)

$$X = X_0 * \exp(K1*T)$$

where X_0 is the original rabbit population (at time T=0).

The two Lotka-Volterra equations are

solved in the general case by computing the increments (DX and DY) for a very small time interval, DT = .0001, and adding these to the starting values of X and Y. This is repeated a very large number of times to compute how the populations of rabbits (X) and foxes (Y) change as time goes on.

The program listed here plots the population of foxes (Y) versus rabbits (X), using the high-resolution page 1 graphics screen of the Apple II computer. The initial values of the populations X and Y, and appropriate positive values of the rate coefficients (K1, K2, and K3), are entered by the program user.

Note that the populations should be scaled to fit the resolution along the axes.

For simplicity, I have assumed that the X population could vary from 1 to 279, and the Y population from 1 to 159.

Notice, also, that a steady state is possible. This occurs when the populations do not change with time, i.e. DX/DT = 0 and DY/DT = 0.

From the Lotka-Volterra equations, it follows that the steady state populations are $X = K3/K2$ and $Y = K1/K2$. The values of the K1, K2, and K3 should be chosen so that the steady state populations lie near the center of the screen. The rate coefficients and initial populations are displayed in the four lines of text at the bottom of the high-resolution page 1 screen.

I used a Silentype thermal printer to display both the listing and a typical RUN. It might be interesting for the reader to try other values for the initial populations and rate coefficients, just to see what happens.

My own interest in this model arose

from its application to oscillations in the concentrations of certain intermediate species in oscillatory chemical reactions. The model requires considerable extension to account satisfactorily for such chemical reactions, however. For the reader interested in such extensions to

the chemical, biological and social sciences, an excellent reference is Nicolis and Prigogine's "Self-Organization in Non-Equilibrium Systems" (Wiley-Interscience, New York, 1977). Professor Prigogine won the Nobel Prize in chemistry for this work a few years ago. □

outpost: atari

Among the hot topics in this month's edition of the Outpost, we will address two of the most frequently-asked questions about the Atari—one concerning hardware and the other concerning software. I'll show and tell you a bit about my recent trip west, and we'll talk a little politics as we did last month. We'll do a little dreaming, too. That's a busy docket, so let's get going. First the softer and fuzzier issues.

Quo Vadis Atari?

Last month I frankly shared with you my disappointment with some of the attitudes and decisions that have recently emanated from Atari. Some of my complaints had to do with the issue of compatibility: I felt Atari had blown it by not making its next-generation games machine compatible with its computers, as the categories are in fact beginning to merge, and in their hearts the 400 and 5200 are the very same machine. I suggested that Atari then compounded the error by creating a new computer that isn't very compatible with its own predecessors. I went on to criticize Atari's apparent hostility to third-party hardware and software development for its machines.

Last week, in a very soggy Sunnyvale, I aired these grievances to various folks at Atari. They listened politely, disagreed often, but did respond with one bit of good news—the Atari 1200 XL is going to undergo an overhaul. Just how extensive a redesign is to be inferred here is not clear yet, but the intention is to start listening, and that is a good intention indeed. Atari does not wish to be perceived as insensitive to the voice of its customers. It could certainly stand to prick up its ears a bit in the Home Computer Division, and now appears to be doing so.

John J. Anderson

The Thinking Man's Atari

Exactly what *would* we like to see in the way of an Atari 1200 XLE (*E* for enhanced)? Well, Atari, we're sure glad you asked, and we hope you're listening

In the display room at Atari's Sunnyvale headquarters. All of Atari's new machines, coin-op, home video, and computers can be seen here.

hard. We think you have the makings of a good machine in the 1200, but that somewhere along the line you lost the core philosophy that made the 400 and 800 the machines they are. And you need to take steps that will move the 1200 up not only into that core category, but beyond it. Don't sweat it—we can tell you exactly how:

The 1200 has a superlative keyboard, and that extra 16K is sure handy. It was nice of you to boost the chroma, but don't forget that many of your customers will be using the monitor output, and the current chroma level is ruinous to closed circuit reception. You went too

far in reworking the operating system, as not even the *Atari Word Processor* will boot on the bowdlerized OS as it now stands. You must make a U-turn on this score. *All*, as opposed to hardly any, of the software we now run on our 400s or 800s, should run on our 1200s. Why the heck shouldn't it? The machines are just *too darned similar* to justify incompatibility! This syndrome is beginning to seem chronic.

While you are at it, bring back *controller jacks 3 and 4* (you can put them on the righthand side). We have games such as *Asteroids* from Atari itself, that call for the extra ports, and we can drive parallel printers from them. The monetary savings from dropping them were mere pennies, anyhow. Then redesign that ROM *cartridge jack* so our third-party cartridges will fit. Did you really do that on purpose?

Now you're back on the right track. Let's take a look at the connectors that should be available on the back panel of the new 1200 XLE. For starters, let's stick on a *bus slot* that corresponds to RAM slot 3 on the modular Atari 800, so we can plug in expansion boards, or maybe even an expansion chassis, for multiple boards. That way we can gain easy 80-column capability, bank-selectable RAM, and other capabilities yet undreamed of. Here is a novel thought: let's actually *encourage outside hardware development*. Remember, that's a big part of what made those fruity fellows down the street from you so popular.

Next to the expansion bus, we should find the *parallel port*. A Centronics style connector would be really civilized. Let's face it, guys. We loyal fans might just want something a little hotter than an Okidata Microline 80 hanging off the side of our 1200 XLEs. This is not

At last, the first home video joystick that puts the firing button where it should have been in the first place.

The new Triga-Command is like no other home video joystick controller you've ever used.

The firing button is directly under your trigger finger, the finger with the fastest reflex action. Which means your thumb doesn't ache any more after playing long games, your firing is more accurate, and your scores are higher.

No other joystick gives you such a terrific grip either. That's because the handle is big and comfortable, not thin and spindly like the others. It's shaped to fit your hand, and has a diamond-cut textured surface to give you the "feel" of genuine Arcade-style joysticks.

Another unique feature are our removable suction cups under the base which clamp Triga-

Command firmly to any smooth playing surface for total single handed operation.

And our joystick is tough. It's made from high impact plastic, so it won't crack under pressure.

Do you use an Atari 400 or 800 computer, the Atari 2600 system, Vic-Commodore computers, or Sears Tele-Games? No problem. Triga-Command fits them all.

All thumbs with ordinary home video joysticks? Get a grip with Triga-Command. It's the first joystick to put the firing button under your trigger finger.—And isn't that where it should have been in the first place?

Programable

INTERFACE

for the Apple II

The FLY BOARD is an interfacing system designed for Apple
Owners who want to learn computer interfacing. The FLY
BOARD is programmable through BASIC or Assembly.

Fly Board's Hardware:

- 16 bidirectional I/O lines
- 4 control lines
- 2 - 16-bit timers
- internal ability
- accepts 09+ commands
- Replaceable with an EPROM
- not used by monitor BASIC or DOS

6522 VIA

2K bytes RAM

2 - 36" DIP Jumper Cables

Support Materials Included:

- User's Manual expertly written to guide the novice
and intrigue the expert!
- Summary Card details at a glance
- Engineer's Notebook 128 page electronic cookbook
- 6522 Data Sheet explains advanced features

Outpost: Atari, continued...

meant as a slight to Oki—but how about
a 92 as opposed to an 80? Or something
like the Mannesmann Tally
MT160L—the difference between 40
and 160 cps.

It should not matter to you guys *what*
printers we want to hook up—just give
us a standard parallel port, and we'll
take it from there.

Oh, and the sight of an RS-232 *serial*
port would bring tears to our eyes. But
no, we shouldn't even suggest it to you.
It would be too good—too generous—
too thoughtful. Why, if you did that, we
could attach the *modem* of our choice to
our 1200 XLEs, in much the way we
hooked up our parallel printers...

*The computer demonstration center fea-
tures an interactive videodisc to guide a
new user through a tour of the 800. Cou-
pling of the Atari with a laserdisc is now
being offered to the outside world, as
well.*

Hey, you know what would be savvy?
If you built *Microsoft Basic* into the unit.
That way the Atari Basic cartridge
would remain standard, while at the
same time Microsoft software would fi-
nally become economically viable on an
Atari machine, as every owner of a 1200
XLE would have Microsoft Basic. And
how about an RCA phono jack for audio
output? Many of us would like to hook
our 1200s up simultaneously to monitors
and external amplifiers—something
which is now tricky to effect from one
DIN.

Unreasonable demands that would
make the cost of the 1200 skyrocket be-
yond all market limits? Absolutely not.

*A cart chock full of 1200s waiting to move
next door for final assembly.*

They could be addressed for a reason-
able additional cost. Unreasonable de-
mands that could not realistically be
crammed onboard the 1200? Absolutely
not. We have snooped around the 1200
board, and believe that these features
could be fit into the sexy 1200 XLE case.
Unreasonable demands that would at
the very least dictate a total redesign of
the Atari 1200? Probably. But fellas—if

*Components that can be stored on rolls
are "stapled" right on to the boards using
machines like this one.*

you had only done things right the first time...

Send 'Em a Message

Fellow Atarian, I urge you to write Atari now and let them know how you feel—they claim to be all ears. Attach a copy of "The Thinking Man's Atari" portion of this column to your letter if you want. Maybe, just maybe, Atari will come around. Their address is P.O. Box 427, Sunnyvale, CA 94086.

Atari Silencer

It is commonly known that in addition to the capability of driving sound through a television or monitor speaker, the Atari has an on-board speaker, similar to the Apple. This speaker serves nearly without exception to flag admonitions of one sort or another, such as a record or playback state on cassette, or an illegal entry in a word processing or similar program. It also provides the chirp of "keyclick" on the Atari keyboard.

The only problem with the on-board speaker is that it drives you crazy. Some programs exploit the speaker so sadistically it makes you wonder whether the programmer was hard of hearing. I even find keyclick distracting—perhaps it is necessary on the 400, but not the 800.

The Atari 1200 XL has no internal speaker, by the way, and pipes keyclick out to the TV, where a volume control beckons. One of the commonly asked questions I get at the Outpost is how to

John Loveless, of Synapse, where a lot of exciting things are planned for the Atari. They are the folks to beat.

shut the darned thing off. As I mentioned last month, I know of no way to do it through software. One answer is to drop the speaker right out of the unit, which is a relatively simple task. But it does have an air of permanence about it.

What could be simpler than the installation of a single pole, single throw switch to cut out the speaker when desired? The snag: the thought of snipping wires or drilling holes in my pristine Atari 800 made the hair on the back of my neck stand on end. Also, though the warranty on my machine had long since expired, I wasn't happy with the idea of doing anything that couldn't be undone. Service people can be put off quickly when they see user modifications. I determined, rather wistfully, that I would live without a speaker.

Then, while engaged in the hobby of staring at all the little packages on the wall of the nearby Radio Shack, I made a fascinating discovery. I saw a product called "two prong connectors," catalog number 274-342, \$2.49 for a package of six. I noticed that the fit would be quite close to the connector used on the Atari speaker. And wow, you sure can obtain really tiny toggle switches nowadays. "SPST micro miniature toggle switch," catalog number 275-624, \$1.59. So small, it can mount between the vent slots on the bottom of the 800. I could then envision a switch modification that was utterly reversible. If ever I need to bring my Atari in for service, the modification can be slipped out in under five minutes.

Outpost: Atari, continued...

If you wish to modify your Atari 800, you will need in addition to the products listed above, about two feet of bell or other light wire, a flat blade and Philips screwdriver, soldering iron and solder, and a bit of electrical tape.

Snip the wire into two 10" lengths. Then, take one of the wires and snip it into two 5" lengths. Strip $\frac{1}{4}$ " of insulation off the ends of all leads. Twist the shorter wires onto the longer wire as indicated in Figure 1. This will make the modification easier to slip in and out later. Next, solder two connectors and the switch to the wires as indicated in the diagram. Unscrew all collars around the neck of the switch. Notice you are using only the socket connectors, not the plug connectors. Leftovers can be saved for another project.

Now you are ready to begin the operation. Disconnect your Atari, and flip it over onto something soft, like a pillow. Unscrew the five screws that hold the bottom panel, and lift it toward you. Notice that the controller ports must be cleared to remove the panel. Can you believe how small that speaker is? Thank

goodness you don't depend on that measly thing for all your sound effects. To disconnect the speaker, pull gently on the connector. Once the speaker is disconnected, remove it from the machine.

Orient the connector so that it matches the view in Figure 2. Using a screwdriver or a toothpick, press down on the silver tongue on top of the plastic connector, as you gently pull the wire from the side. Don't force anything! When you have pressed the tongue down far enough, the contact will slide right out. Pull both contacts out of the plastic container.

Next, take the bottom panel you earlier removed and hold it so that the vents are at the bottom, as shown in Figure 3. You will mount the switch in the lefthand vent, where there is room to spare, and nothing nearby to short accidentally. Insert the flat blade screwdriver in the slot where the switch will be mounted (it's a good idea to stay over toward the left—this will make the switch easier to reach). Gently twist the screwdriver to spread open the slot, then press the neck of the switch through.

The plastic will have to bend a bit to accommodate the switch. Put on a washer, then screw on the switch lock nut to fasten it in place.

Final installation will be facilitated by repositioning the back panel so that the computer looks like an open valise. This way, the wire between switch and speaker will not be stretched. First, press the speaker contacts into the middle connector, as indicated in Figure 4. The speaker can now be repositioned in its spot. Gently connect the far socket to the speaker leads from which you removed the original plastic connector. Spreading them a bit will insure a tight fit. Finally, tuck the wire away under the keyboard post and away from boards and the speaker itself. There is more than enough room on that side of the computer to keep the modification from interfering with any other components.

It is a good idea to tape the original connector to the modification wire itself. Then, should you wish to put things back the way they were, the original connector won't be lost in a drawer somewhere.

Screw the back panel on, plug things back in, and run a test by typing CONTROL-2, which rings the bell, with the toggle toggled. The chirp of keyclick will also be gone—if and when you want it to be so.

Listen: the sound of silence.

Outpost: Atari, continued...

Basic files autorun. You won't find it in the DOS manual, so don't waste your time looking as I have. But thanks to John Humble of Mercer Island, WA, creation of autorun files is now made delectably easy.

Listing 1 will take just a few minutes to type in, and makes any Basic program into an AUTORUN.SYS file. First it asks for the name of the file you want to make bootable. Then it checks to see whether an autorun file already exists on the disk in question. If it does, the program asks whether you wish to overwrite that file. Then it finds the program you indicated, and makes it into the AUTORUN.SYS file, using our old

friend, the dynamic keyboard method.

John also sent us Listing 2, which is a very short and sweet menu program. Put this program onto a disk full of other programs, then use the program in Listing 1 to make it autorun. The program will read the directory from the disk, and store each title in a string. The titles are then printed on the screen with a letter in front of each one; running them is as simple as pressing the letter of your choice. Good job, John, and thanks.

Next month: compacting data into graphics characters, and the complete program listing of a deluxe self-modifying title card generator from our January competition. Catch you then! □

SCRG PRESENTS

For Your Apple][, Apple][+, Apple //e, Apple /// & Franklin
switch-a-slot

The **switch-a-slot** connects to any peripheral slot of the computer through an 18" cable. The user can plug up to four cards in the **switch-a-slot**. The desired card is chosen by using a switch on the front, and only the selected card draws power. This product is suitable for most peripheral cards. The **switch-a-slot** is perfect for selecting between different printer cards.

- Holds 4 peripheral cards
- Saves wear and tear on delicate connectors
- All connectors are gold plated for reliability
- Only selected card draws power
- Works with most cards

\$179.50

Extend-A-Slot

The **EXTEND-A-SLOT** brings a slot outside your **APPLE™**, allowing an easy change of cards. The 18" flex cable is long enough to allow placement of the card in a convenient location. The high quality connectors are gold plated for reliability. **\$34.95**

These products work well with all slow to medium speed cards, such as Modems, Printers, Clock, Music, etc. They are not recommended for high speed data transfer devices such as alternate processor and disk drive controller cards.

These fine products come with a 6 month warranty. Available at your local dealer or direct from:

images...ibm images...ibm im

As one might suspect from the column header, Will Fastie is not responsible for this month's column. Will has given out that he has taken another position which promises greater gains in money, prestige, and so forth. In fact, he has retired to nurse the broken heart for which this month's author is responsible. It was I who fell in love with his father and caused two full paragraphs in the November '82 issue of this magazine to be devoted to a wholehearted tirade against a certain paternal person of indisputable romantic character. In order to really make me feel guilty, Will invited me to take the place of one whose life was irretrievably ruined by an accidental mixup by Baltimore Information.

Will further refused to suggest what I should write about this month. Flipping through back issues revealed that two columns were devoted to a certain dilapidated table and the garage to which it had been relegated.

To begin the transition as smoothly as possible, I present a similar photo. This article of furniture is known around our house as the dining room table. For six months it was variously referred to as the-table-which-would-be-the-dining-room-table-if-it-didn't-have-your-computer-on-it and the-table-on-which-I-would-like-to-eat-my-dinner-but-it-has-your-computer-on-it. The computer now resides in a hallway on a perfectly normal, but tasteful desk as our garage (unlike Will's) is a barn whose roof flakes off during any mildly vigorous atmospheric perturbation.

Will has the advantage over me in that his desk is probably littered with letters, software, and multi-function gad-

Susan Glinert-Cole

Passing the Buck

Now see, I'm not sure what to say here. On the one hand, I want to tell you not to believe a word Susan says about me, especially given her past disruption of my life. On the other hand, we can all clearly see from her first column that she is bright, witty, technically competent, and mildly charming. And believable. I think you'll continue to enjoy "IBM Images."

So will I. But I must confess to a great sadness about moving on. *Creative* is my favorite magazine (oops, I mean my second favorite magazine), one I have read for years, one I will continue to read faithfully. My new boss summed it up very well saying "It's so interesting!" It is, and will continue to be so. Even without me.

For those of you interested, the reason for my departure from these pages is a new magazine, *PC Tech*

gets, thus a few minutes spent stirring up the pile probably causes ideas for this column to seed themselves. Unfortunately, my desk is littered mostly with core dumps from an IBM 360/370 course which I seem to have signed up for in my spare time. Underneath the core dumps I did locate my printer, which, as it is not the IBM/Epson, but the NEC 8023A dot matrix, is sufficiently unique to warrant some discussion.

The NEC 8023A Dot Matrix Printer

I bought the printer about ten months ago and it has worked splendidly ever since. When I was shopping around for a printer, the NEC appeared to offer considerable advantages in speed, print

Journal. Executives from Ziff-Davis bound and gagged me, took me into the deep, dark recesses of One Park Avenue, and threatened me with a wonderful company, great people, and more money until I succumbed and agreed to take the job as editor. I know you will never forgive my weakness. But do you have any idea how much a new Volvo station wagon costs? More than I can afford even still, actually.

It has been a most pleasant experience writing this column for the last eighteen months. I thank you for your interest and your letters of encouragement, and I hope I have been of some help to you. A special thanks is due Betsy Staples for her continued support, trust, and good humor. And now that she doesn't have to coddle me, she's a lot less cranky.

And now we know for sure that MacArthur was right: Old writers never die, they just become editors.

—WF

Son of "The Inflation Fighter"

The **Orange+Two** \$1095

Suggested
List Price

New Math from Orange+ Computer Systems Z80A CPU + 6502 CPU = **"Orange+Two"**

We give you two computers for the price of one, because we've put them both in the same machine. The "Orange+Two" is the latest "state of the art" personal business/home computer with two microprocessors, each operating independently. Consider: CP/M 3.0, Digital Research's new enhanced CP/M version, AND 6502. That means the "Orange+Two" will run over 20,000 currently available programs, including some of the most popular business and game software on the market today. And, it uses the new easy-to-learn, easy-to-program language: FORTH-79.

STANDARD FEATURES:

- Z80A plus 6502 microprocessing units
- + 64K RAM Bank Switchable, fully expandable
- + Built-in disk drive controller for two drives
- + Programmable ASCII keyboard with numeric keypad and auto repeat
- + Built-in control-reset function
- + Audio volume control switch
- + High resolution video display with graphics

The "Orange+Two" is the pacesetter of the future. Why buy 1970's technology at 1983 prices, when you can purchase two computers for the cost of one. Ask your favorite dealer for the "Orange+Two".

- + Cassette interface for tape backup unit
- + Game input and output connector for joystick
- + Operating languages: FORTH-79, BASIC, CP/M 3.0
- + Streamlined, high-impact case with removable lid, allowing full access to interior
- + Metal base plate with motherboard connectors for fast board removal and replacement (no screws)
- + 110/220 switch selectable power supply. Operating range 47-65 Hz
- + Programmable EPROMS (2764). Allows user to do custom ROM programming

The "Orange+Two" carries a full 90 day warranty. Nine-month extended warranty is available for an additional \$99.00.

Prices & Specifications are subject to change without notice. Limited quantities are subject to availability.

If "Orange+Two" is not available locally, you can order factory direct. To order factory direct, call
(213) 999-5210 or send bank check or money order for \$1095*
to Collins International Trading Corporation,
23801 Calabasas Road, Suite 2050, Calabasas,
California 91302

Allow 30 days for delivery from receipt of order.

*California residents add 6½% sales tax.

DEALER INQUIRIES INVITED.

CIRCLE 181 ON READER SERVICE CARD

IBM Images, continued...

quality, and versatility. Friction pin feed and dot graphic capability are standard features. It also has a 1.5K buffer, which has been a reasonable substitute for a print spooler. The NEC is also faster (100 cps vs. 80 for the Epson) and doesn't blat at you when it runs out of paper, a feature on the Epson which I found obnoxious. Even with these extras, the price was slightly less than the Epson, and much less than the IBM printer, so I plunked my money down for the NEC, and have had only three regrets since.

First, when the graphic screen dump programs emerged from the software houses, they were all written for the Epson. If I had wanted to fool around with the dot graphic capabilities, it would have been necessary to write the screen dump program myself. Somehow I never got around to doing this, and so have never been able to take advantage of this feature. I understand that there does exist such a program, and that it is available from Aegis Systems for \$25, but I have never seen it and so cannot comment.

Next, a minor problem presents itself when one wants to use the `PrtSc` key. Hitting `PrtSc` causes the screen to be printed all right—all on one line. The dip switch 1-8 is normally set to emit a carriage return at the end of a line; to get the necessary linefeed, this switch must be set to the other position. Unfortunately, this produces an extra line feed when a file is sent to the printer from disk. Since 1) I can rarely find my dip switch flipper when I want it, and 2) locating the switch requires a flashlight (something else I usually cannot find when I need it), I do not use `PrtSc`.

The third regret really has nothing to do with the printer, except that it is hard to use one without those little gizmos called printer ribbons. This regret actually didn't surface until a few months after we had been making noisy music together and the ribbon was gamely producing light grey copy.

I called the place where I had purchased the printer and was told that they didn't stock the ribbons because they were too difficult to get. They neglected to tell me this, of course, when I bought the printer. They did tell me where to call and guess what, the ribbons had been on back order for five months. I called seven or eight other places and discovered that NEC printer ribbons were backordered all over the galaxy. Hum. It took an additional month to get the replacements.

As soon as the new ribbons arrived I dissected the inkless one and can report that both the high cost and tenuous

availability can be worked around with a kitchen knife and a bottle of stamp pad ink. Grasping the knife in one hand and the ribbon cartridge in the other, carefully pry off the top of the case. The ribbon is neatly packed like ribbon candy inside. If you are too vigorous in working off the top, you will likely have printer ribbon in places you never dreamed of. Substitute stamp pad ink for the knife and liberally squirt the foam rubber cylinders, around which the ribbon travels, with the ink. Snap the top back on the case and wind the ribbon through at least one complete circuit. This takes longer than you could imagine.

It is now possible to purchase the ribbon in a separate packet for \$7.99 from the Check-Mate Company and insert it yourself. The ribbon replacement kit

comes complete with a pair of disposable gloves (for the fastidious). This has definite advantages over the pry and squirt routine and costs less than a whole new cartridge. Check-Mate does sell new cartridges at a considerable discount (\$9.95), so for only two more dollars, the interesting problems which result when the ribbon gets out of control can be avoided.

NEC Printer Formatting Program

The program in Listing 1 may be a little out of keeping with the more common MS-DOS/Basic programs which are usually found around here, but I thought it useful enough to include for those folks who have the NEC 8023A and some type of Pascal around. This program was written with the UCSD p-system Ver. IV.1 from Network

Listing 1.

```
PROGRAM FORMAT;
(AUTHOR : SUSAN GLINERT-COLE)
($I-)  (* TURN OFF IORESULT *)

USES ($U #5:USERLIB.TEXT) SCREENOPS, COMMANDIO;
( USES SCREENOPS AND COMMANDIO SEGMENTS, LOCATED IN USERLIB.TEXT)

(***** INSTRUCTIONS *****)

This program will format an input file which has the proper codes
imbedded in the text.

The form is as follows:

Use the left bracket ( < = function key #2) to begin instruction.
Use the right bracket ( > = function key #4) to end instruction.

The codes are:

N = Pica (this is the default face)
E = Elite
P = Proportional
B = Bold, or double strike
C = Condensed
U = Underlined
D = Double width letters
T = Top of form
M = left margin

1/6 = 1/6 inch line spacing (this is the default)
1/8 = 1/8 inch line spacing ( for cross stitch patterns)
XY = Y/144 line spacing

- = cancel code and must precede each single code

Examples:

<BC>  = bold condensed
<UE>  = underlined elite
<-B -E> = cancel bold and cancel elite
<M10> = left margin begins ten spaces in from edge of page
<C-U> = condensed face and cancel the underscore

Miscellaneous notes:

1. .text must follow the filename
2. condensed face is cancelled by requesting any face (eg, N,P,E)
3. to configure the printer in general, use CONSOLE: for input file.
4. when using any command that needs integer input, place the command
   inside its own set of brackets.)

The UCSD p-System

The UCSD p-system is not in common use among IBM PC owners. I am acquainted with the argument that, because most people don't use it, it is not a fit item for discussion. I maintain that if its advantages were trumpeted, more people would use it, so, at the expense of aggravating proponents of the former argument, let me indulge in the latter one.

One of the objections to the p-system which immediately leaps to the eye is its formidable price. This can run from \$625 (for the IBM version) to \$848 (for the Network Consulting version). These prices are misleading, since the system includes a great many utilities which an MS-DOS user ends up purchasing separately anyway.

Admittedly, \$840 is a considerable sum of money to expend all at once, so, in an effort to soothe the pecuniary sting, I list in Figure 1 some of the utilities included in the system, with an approximate cost for separate purchase.

Figure 1.

Pascal	\$ 350
8088 Assembler	\$ 100
RAMDisk	\$ 35
Print Spooler	\$ 25
Fancy Disk Utilities	\$ 80
Full Screen Editor	\$ 100
Screen Utilities for Pascal	\$ 150
8087 Support	\$ 150
Communications Package	\$ 75
Depressing Total	\$1065

Since all these programs are integrated into one operating system, they are designed to work together in a cohesive manner. There is the further advantage that, in the event of a crisis, there is only one phone number to locate. The people at NCI have been courteous and helpful when I have contacted them.

Excellent use is made of meaningful on-screen prompt lines; I found these a welcome relief from the cryptic A> of MS-DOS. Even with little plastic reminder cards that fit around the keyboard, I can never seem to remember the proper sequence of colons and letters, and I gave up trying to commit to memory a series of poorly spelled commands. (CHKDSK? CKDSK? CKDISK? CHCKDSK?). A well-formed operating system should present a set of choices from which one can delicately pluck the desired command. A well-formed programmer has many more important things to deal with than the precise syntax of the operating system of the moment.

IBM Images, continued...

The system is easily configured to your personal idiosyncracies and, as source code is provided for some of the utilities, you can customize these as well. The source code also provides a wonderful insight into the finer points of the operating system, and an excellent education can be gotten from reading these programs for both form and content.

The poundage and the complexity of the documentation appear formidable, but it is extremely well written and quite comprehensive. The flavor is one of gentle and chatty instruction and conveys the philosophy of a system which has been designed for the convenience and education of the end user, who is encouraged to participate in its further development.

If I have any criticism of the documentation, it is that it is presented in several separate notebooks, with updates and IBM variants scattered somewhat untidily throughout. Most of my questions were eventually answered somewhere in the documentation, but locating the information sometimes took perseverance.

The documentation is not meant to be a tutorial on Pascal; the NCI version of the p-system comes with *The UCSD Pascal Handbook*, which is a tutorial for the experienced programmer. For the not-so-experienced programmer, a useful adjunct is *Programming the IBM Personal Computer: UCSD Pascal*, by Seymour Pollack. This last book has many interesting and engaging programming problems at the end of each chapter. I was especially taken with the one concerning broccoli ice cream.

Another objection I have heard is that p-code is slow compared to the native code generated by IBM Pascal. All of the benchmarks I have seen have shown

this to be true and I believe them. In most cases, the programs I have written run with no delay; it is this benchmark with which I am really concerned. P-code can be speeded up by compiling critical sections to native code and by turning off range checking. I have never found either of these tricks necessary to improve performance, but programs which do a great many numerical calculations will probably see a considerable improvement using these two compiler options.

The most outstanding exception to the adequate speed comments above is a graphics program that draws a fancy fedora in living color. It takes 45 agonizing minutes to run in p-code and 40 minutes to finish in Basic. I tried all of the tricks I could think of to speed it up with absolutely no effect. I run the program for such company as is fascinated by fancy fedoras and expect that when I purchase the 8087 numeric co-processor the hat will whip onto the screen in a flash of digital lightning. I will include this program in another column for stopwatch and fedora aficionados.

P-code may not walk away with any ribbons for speed, but the size of a compiled program is downright dainty compared to that produced by IBM Pascal. Since I bought my machine more than a year ago, it boasts antique, noisy, single sided disk drives and a measly 64K of memory. The very concept of a three pass compiler that generates bulky object code and requires 128K of memory just to exist filled me with more than a vague ennui. As you have probably gathered by now, the author is excessively lazy and avoids, when at all feasible, such tiresome occupations as memorization, disk-swapping and racing into computer rooms to turn off a blatting printer. It is a safe bet that the author can be described as a textbook version of

a couch potato. The author, therefore, will never be very fond of any computer gadget which might cause her to expend energy when there is a better alternative available.

I have heard it said that few programs are written to run in the p-system environment. There certainly isn't the plethora of programs one finds for MS-DOS and CP/M. Most of the programs which are written with the p-system include a run-time package. The end user has every right to be oblivious to the gory details of the operating system. However, anyone who enjoys program development and system twiddling will find the p-system flexible, accommodating and complete enough that additional utilities are really not needed. The original argument I put forth at the beginning of this discussion holds true: if people did take advantage of this elegant package, plenty of software would become available. The pioneering spirit should not have died out already among computer buffs.

A friend of mine, after having read the above, asked why I didn't discuss the IBM p-system. I have two perfectly splendid answers to this astute question. First, I don't own the IBM version. The NCI version came equipped with all sorts of extra utilities such as programmable function keys, hard disk, double sided and quad density disk support, RAMdisk, 25% more disk storage by using ten sectors per track instead of IBM's eight, and a custom screenops package. These features alone were worth the extra expense of NCI's version, and there are other extras included that you can read about if you send for information.

The second reason is even better than the first one. As soon as I began writing this column, I beetled on down to the local Computerland to do some intelligent comparisons between the two versions. Unfortunately, IBM has recalled its version of the p-system to whatever nirvana is reserved for recalled software, so there was not a copy to be found for me to do my intelligent comparisons with. No explanation was forthcoming from Computerland as to why the p-system had vanished in a puff of blue smoke. Judging from the performance of the IBM Fortran Compiler, wretched performance does not appear to be an adequate criterion for recall. This leaves us to speculate about defective ring binders and hub reinforcers. I hope that I will have an opportunity to examine the IBM version when it reappears.

Kaleidoscopic Entertainment

Maine is not exactly the Hub of the Universe; it wasn't until I had been liv-

ing here for a year that I found another IBM PC user (to be perfectly accurate, he found me). After some friendly phone conversations which centered around living in Searsport (if possible) and making a living writing software (if possible), I received in the mail a copy of Once Begun Computation's entry into the software market. Being snowed in for the better part of the winter obviously had nothing but a beneficial effect on the imagination and care with which this package was put together (who said cabin fever is universally debilitating?).

The packaging and graphic design of this product are really unique. The disk comes boxed in a neat white plastic case and sports a gold write-protect label. The program is not copy-protected and an extra label is included in the package for the backup copy. The program is as visually compelling as the wrapping, although its intensity can be somewhat boggling after a while.

As the name suggests, *Kaleida* generates kaleidoscopic graphics which are entertaining or artistic, depending on your orientation. The size, rate of change, and colors are all controlled by function keys. This allows enough interaction with the design to prevent the visuals from becoming too hypnotizing.

On the other hand, you can easily avoid temporarily the income tax, oil bills, and other nefarious concepts by booting *Kaleida*, pouring some wine, and turning off the lights. The price is only \$12.

Useful Gadget

Disk drives and smoke, ho hum. We heat mostly with wood, which is incredibly dirty, and I have been protecting my disk drives from disaster with plastic bags. Aside from the unaesthetic appeal of old vegetable bags flapping from the front of a very expensive machine, this routine works fine. While I have been trained as a scientist, I do engage in some forms of superstitious behavior, in particular, every month I bring an offering to the expensive machine in the hopes that doing so will keep it from breaking down.

Last month, peace of mind was obtained by spending a mere \$8 on a disk drive cover from Nat Hellman III Associates. The cover is an oblong piece of textured black vinyl (with a handle) that fits snugly into the disk drive recess. It is easy to remove when changing disks and is a fine substitute for old plastic bags. I am sorry to report that, while the cover looks great and functions perfectly, the expensive machine was not satisfied with an offering that cost less than \$500.

Fairly promptly after I proffered the disk drive cover, it blew its system board out in a silicon snit. I will leave a description of this adventure for another time, and have promised the expensive machine either double sided disk drives or 512K of memory for the month of March. This appears to have had a placating effect. □

rings...trs-80 strings...tr

As the fifty-second star is sewn on the TRS-80 flag, we look at the Model 12 that replaces the Model II, Radio Shack's support for outside software writers, a database program for creating adventure games, the new version of *CopyArt*, a screen cleaner, and a short program that creates abstract displays.

Model 12 Replaces Model II

The TRS-80 Model II (Aug. 1979, p. 30), designed for "professionals and small businesses," has been replaced by an enhanced version called the Model 12 (Figure 1), which closely resembles the Model 16 (June 1982, p. 216) and has 80K of memory instead of 64K, more expansion slots, etc.

The 12 has a green screen like the 16 and the same slim-line double-sided disk drives; two fit in little more width than the single built-in drive of the II. The keyboard has a "low profile," meaning that it is thinner than the keyboard of the Model II, making it a little more comfortable to use on your lap, if you prefer to type that way.

Seven of the command keys to the left and right of the Model 12 keyboard have narrow tops, to reduce the chance of hitting ENTER or TAB or SHIFT—or whatever—by mistake. The Model II has only two programmable function keys on the numerical keypad; the 12 has eight. The reset switch on the II has been replaced by a button and recessed to make it a little harder to hit by mistake.

Stephen B. Gray

The II has only four plug-in card slots; up to seven boards can be plugged into the optional card cage (\$199), installed behind the rear access panel of the 12, for adding the 144K *VisiCalc* memory expansion board for larger

spreadsheets, the hi-res graphics board, the Model 16 upgrade kit for 16/32-bit processing, etc.

All current Model II software will run on the 12, which has the same "fawn-grey" color as the 16; a Model 12 can be

Figure 1. The Radio Shack TRS-80 Model 12, which replaces the Model II, has two slim-line disk drives in only a little more space than the II uses for one.

MICROTERM...A SOUND HEARD ROUND THE WORLD, ...IN SECONDS.

MICROTERM

The expanding horizon of office and home use of new communications and data services tying smart terminals into networks through telecommunications links makes the world need a high speed terminal program.

Busy computers shouldn't have to wait for data simply because an old fashioned link can't handle today and tomorrow's telecommunications. Slow terminal telecommunications can stand the smart operator's world on its ear.

Into today's fast paced world, Micro Systems Software presents MicroTerm, the first truly high speed terminal for this inquisitive world. Some computers can run at up to 4800 baud null-free (9600 in some direct-connect applications).

MicroTerm enables you to do more in less time, in both ASCII and the new "error-free" direct file mode. Its unique Macro-Key function allows you to have 10 user-defined keys that transmit up to 64 characters at a single stroke. You can even dial a phone number and transmit the buffer at a specified time completely unattended by the operator.

And while MicroTerm improves your computer's "ears" by outperforming any other telecommunica-

tions terminal program, its low price won't take a bite from your bit budget. It's only \$79.95 retail.

You can't lose with MicroTerm's features, performance, price, documentation, or support.

It's the only terminal program enabling you to continue operations in the command mode while receiving additional data through the RS232 cable. And you can adjust video width, turn on the printer, open the buffer and do many other things and then return to the terminal mode without missing a thing.

Available for the TRS-80 Models I, II, III, 16, IBM PC, Zenith Z-100, and Apple II computers.

If these advantages are what you want in your world, communicate with your nearest MicroTerm dealer.

TRS-80 Strings, continued...

upgraded to a 16. The new TRSDOS 4.2 disk operating system (an enhanced version of TRSDOS 2.0) supports double density, single or double sided 8" floppy disks.

The 80K Model 12 is \$3199 with one disk drive, \$3999 with two. Each disk stores 1.25 megabytes, as against 416K per disk on the II. When introduced in the 1979 RSC-3 catalog, the 64K one-disk Model II was \$3899; in the 1983 RSC-8 catalog, the same II is \$3499.

Support for Outside Software Writers

Up to now, Radio Shack has offered software written in-house, or software written outside but sold under the Radio Shack label, or successive editions of the *Applications Software Sourcebook* (containing brief descriptions of programs neither "examined or tested" in Fort Worth).

Anyone wishing to write TRS-80 programs for sale outside Radio Shack was on his own, because the company gave help only if the programs were to become Radio Shack products.

Radio Shack has now instituted an Outside Software Support Program to assist professional third-party software vendors with marketing and technical support. Under the new program, Radio Shack will review outside software, and if it passes, will include it in a software referral guide to be available in Radio Shack stores. The guide will contain an evaluation of the package and tell where it can be bought. The company will also consider making the software a Radio Shack product, if the vendor wishes.

Why has Radio Shack started this support program? To make more software available, says one of the company's executives. To improve the company's market share, says a vocal New Englander, adding that Apple's aid to third-party manufacturers helped give Apple the largest chunk of the market.

If an outside writer's application is accepted by Radio Shack, he becomes a member of the program and receives Technical Information Guides to the hardware he is using, Software Development Guides used in-house by Radio Shack, internal library routines for standardizing packages, and TRSDOS licensing if desired (for a one-time fee of \$500 without royalties).

Among the basic rules: no games will be evaluated, and the outsider "must be able to support any user problems with the package" when customers telephone for help. If you're interested, write for an application form to Software Support/Review Program, Radio Shack, 1300 One Tandy Center, Fort Worth, TX 76102.

Game Database Program

The Alternate Source (704 N. Pennsylvania, Lansing, MI 48906) offers a monthly magazine called *TAS* for assembly language maven (Mar. 1982, p. 202), and a variety of games and utility programs. They sent me a unique program for creating adventure games, for a 48K Model I or III TRS-80.

The Adventure Program (\$39.95 on disk or tape) consists of three adventure games, an editor to change them to suit your personal preferences or to create new games, and a drive program to run the database created by the editor.

The database is the actual adventure; by changing it, you create different adventures. The database consists of:

- Reader information: A header containing information the player will need to know.
- Action entries: The known player inputs, conditions, and commands.
- Vocabulary entries: All the words (verbs and nouns) the player may use in this particular adventure.
- Message text: The messages used by the adventure and controlled by the actions.
- Room description: List of directions to other rooms, along with room descriptions.
- Object description and starting locations: Tells what the objects are, and where they are.
- Action titles: Optional text descriptions of the actions; not used in playing the game but useful in editing.

• Trailer information: Version number, adventure number and a checksum.

Action entries are the heart of the adventure, and are stored as eight numbers. The first determines where the action is to be evaluated, the next five are conditions to be met (or parameters for the commands), and the last two bytes specify what commands are to be performed if all the conditions are met.

There are 20 possible conditions, such as IN/W for the player being in the same room as the object (the condition fails if the player is either holding the object or if the object is in any other room), or ORIG for the object being in the same room it started in (the condition fails if the object is in any other room or is being carried).

The last two bytes of the action entry consist of four command codes, for which there are 149 possibilities, such as NIGHT for darkening a room, DROPX for dropping an object in the same room as the player, and DEAD to turn the light on in the room, move the player to the last room, and tell him he is dead.

Vocabulary entries include words such as GO, GET, DROP, ANY, NORTH, WEST, and UP.

Instructions

The manual provides rules for entering a user adventure, such as "If the action entry uses commands which require parameters, there must be parameters in the condition line. If not, strange messages and objects will appear."

2803 THOMASVILLE RD E. • CAIRO, GA. 31728

TRS-80 Strings, continued...

The longest chapter gives instructions for using ADVEDIT, the program that edits the adventures, with commands such as READ, MODIFY, INSERT, LIST and PRINT. ADVEDIT can handle up to 300 action entries, 150 vocabulary entries, 100 rooms, 100 messages, and 150 objects.

The last chapter provides a short sample adventure with an in-depth explanation of the database.

A New Language

Writing a new adventure (or editing an old one) with this program is not a simple matter of sitting down at the keyboard for a few minutes and knocking out a red-hot odyssey. Although *The Adventure System* simplifies much of the work, you must learn the adventure language, which has an extensive set of commands. This means you can write a rather complex adventure, and that takes time if it is to be new and exciting.

The final page of the manual notes that many problems were encountered in writing the adventures contained in the initial package, and that although most of the problems are documented in the manual, there is still much to be explored, and new techniques will probably evolve. So there is a newsletter, "Augment," at \$12 a year, which provides updates, consultation on marketing your own adventures, support programs for *The System*, and discounts for adventures.

In a recent ad, The Alternate Source offered an "Adventure Package" of two

games (Isle of Doom and Lost City of Gold) created with *The Adventure System* (\$15.95 on tape, \$19.95 on disk), with this note: "All media is unprotected! TAS adventures allow you to SAVE up to 10 versions of the game in progress!"

If you are really into adventures, or just want to get a good idea how they are made, try this system, which seems to be one of a kind.

CopyArt II

No sooner did I review *CopyArt* (Jan. 1983, p. 334) than a new and improved version, *CopyArt II*, was introduced by Simutek Computer Products Inc. (4897 E. Speedway Blvd., Tucson, AZ 85712).

CopyArt II, priced at \$149.95, is a word processor that offers graphics, math, sorting, and mail-merge utilities. Columns may be created for journals and reports, and Basic programs can be edited.

According to Mike Garipey, president of Simutek, the differences between the new and old versions are as follows: "We cleared up some of the hard-to-use functions. We added:

- *Scripts* load commands, so you can load *Scripts* files directly without having to save them in ASCII format.
- A sorting command, for sorting lines of text in ascending or descending order.
- A math package (similar to *VisiCalc*, but only a little), which prints the result in the text.

- A mail list program, which holds up to 2000 names on the Model III.

- A mail-merge program, for personalized form letters."

CopyArt II. Mike says, is flexible enough to do a simple accounts receivable.

Simutek now has customized drivers for most printers, available separately at \$19.95 each. You get one driver of your choice with *CopyArt II*, which now works with hi-res printers such as the Prowriter (which is the same as the C. Itoh 8510 and the NEC 8023; they're all made by C. Itoh).

CopyArt previously worked only on the TRS-80 (Models I and III); it will now work on all TRS-80 look-alikes, including the LNW and PMC-80, according to Mike.

If you already have *CopyArt* can you upgrade to *CopyArt II*? Yes, if you previously registered your copy; you get a 200-page manual with two disks by sending Simutek \$15 plus the serial number of your copy of *CopyArt*.

Screen Kleen

Cleaning your TRS-80 screen isn't all that easy, especially if you don't do it very often. A kleenex or cloth usually doesn't do the job properly, because of static electricity, and a wet cloth can be dangerous. TRS-80 manuals, like most computer manuals, don't cover preventive maintenance.

According to the news release accompanying a product recently sent to me, a "revolutionary new scientifically developed cloth" called Screen Kleen is designed "to remove dust from the screen of a CRT terminal. If dust remains on the screen during chemical cleaning and destating, it can act like sandpaper, etching the screen and causing an eventual decrease in the clarity of images." ("Destating" means applying an anti-static liquid spray.)

Besides cleaning CRT glass, "Screen Kleen can be used on screen overlays where many destat chemicals cannot. Compressed air just moves the dust around not remove it [sic]. Screen Kleen is an excellent remedy for easy removal of paper dust from printers. It can also be used to clean dust from walls, ceilings, desk tops, and any other equipment in the computer room or office."

Screen Kleen seems to be cheesecloth impregnated with a waxy, odorless substance. Just now I used it to clean the screens of several computers, and it worked quite well, left no trace of residual dust, and also cleaned the keyboards quite nicely. Because of the waxy impregnant (to which the dust adheres), the material can be folded into shapes that easily get into the spaces between

**THE
BEST
OF
SYNC!**

Here's the best from Sync, the exciting magazine devoted to Sinclairs!

The *Best of Sync* is a collection of more than 80 of the most valuable articles, programs, tutorials and reviews that appeared in Volume One of *Sync*, the magazine for Timex Sinclair and Sinclair owners.

This information-packed book is a vital resource for anyone who'd like to get more work (and more fun!) from a Timex Sinclair 1000, a Sinclair ZX81 or ZX80, or a MicroAce computer. Topics covered include:

- Games
- Mathematical applications
- Graphics techniques
- Software programming
- Translation
- Machine language hardware
- Resource listings
- Product reviews
- Complete glossary

In *The Best of Sync* you'll find game programs like "Forest Treasure" and "Motorcycle Race Game"...hardware plans for a "Key Click Generator" and a "Parallel Interface"...programming features on "Handling Character Strings in the ZX80," "Converting from Other BASICs" and "An Introduction to Machine Code." And that's just a small sample.

These ultrapractical features appeared in issues of *Sync* that are now out of print and nearly impossible to find. But you can still make use of the important information, techniques and programs they contain—by ordering *The Best of Sync* today!

Also available at your local bookstore or computer store.

8½" x 11", softcover.

keys. (It's also good on shoes.)

The news release says "Dealers are being contracted nationwide to carry Screen Kleen." By mail order, it is \$2.95 for two cloths in a plastic bag, from CRT Products Co., 2013 Franklin St., Detroit, MI 48207. Computer clubs are offered three dozen bags for \$64 from this division of MWB Industries.

Short Program #39: Triangles and Rectangles

From Keeseville, NY, Stephen Havens sends this letter: "Here is a short program I wrote on a TRS-80 Model III. It randomly draws triangles, rectangles, squares, and lines on the screen. As the program randomly draws, it will set a block if it is reset, or reset a block if it is set." (See Listing 1.)

Not all that short a program, but it creates pictures very similar to some works of modern art hanging in museums around the world.

If the RND(3) in line 20 comes up with a 1 or a 2, the program draws triangles (by branching to line 30) or rectangles (by branching to line 90). Depending on the value of X1, X2, Y1 and Y2, the rectangles may turn out to be squares or lines.

If the RND(3) in line 20 generates a 3, and if the RND(25) in line 140 then comes up with a 1, lines 150-170 will paint the entire graphics area white, except where blocks have already been set, in which case they reset them. Thus,

once in a great while, the picture on the screen will be reversed. If you prefer the picture to be reversed only when you decide it merits the change, you can alter lines 20 and 140 accordingly.

Lines 40-50 reject values of X1 and X2 that create triangles whose bases would have to be drawn from right to left, or triangles whose base is wider than their altitude, or triangles whose base is an even number of graphics blocks wide (can you figure out which case is which?).

Lines 60-80 draw the triangle; if line 65 finds a block set, it resets it. The triangle is always isosceles, because each succeeding "layer" is reduced in length

by 1 at each end. If you prefer right triangles whose hypotenuse aims at the top right of the screen, delete

X1=X1+1

from line 75. If you prefer that hypotenuse to aim at the top right of the screen, delete the

X2=X2-1

from line 75. (Can you rewrite the program so that all three types of triangles will appear randomly?)

Lines 90-100 set the size of the rectangle and reject rectangles that would have to be drawn from right to left. Lines 110-130 draw the rectangle; if line 120 finds a block set, it resets it.

The third part of line 100 offers the simplest solution to the problem of X1 being larger than X2: go back to the beginning of the line and get new values of X1 and X2. However, if you want a slightly more elegant program, there are at least two ways to avoid having to return to the beginning of line 100.

The first requires adding a STEP function to the third part of line 100 and to the second part of line 110. (See Listing 2.)

which can be expanded to take care of rectangles that would have to be drawn from bottom to top, and which are rejected by the third part of line 90.

The second way to avoid having to return to the beginning of line 100 is a little more sophisticated, and combines the two relevant parts of new lines 100 and 110 by comparing X1 with X2. (See Listing 3.)

If X1 is larger than X2, the comparison returns a -1; if smaller, a 0. Now multiply each by 2 and add 1, and the result is -1 if X1 is larger than X2, or +1 if X2 is larger than X1. Thus, the rectangle can be drawn regardless of which is larger.

How about line 40, which rejects triangles whose bases would have to be drawn from right to left? Can't you change line 40 (and line 60) in the same way we just changed lines 100-110? Yes, but then you might have trouble with line 75, the line that shortens each succeeding layer at both ends. Does line 75 assume the base will be drawn from left to right, and would it therefore have to be changed if the base could be drawn in either direction?

In the original program, which was part of a typed letter, line 90 ended with 100 instead of 90. This had to be a simple transcribing error, made in copying the program from the screen, rather than what the author really intended. To see why, change that line-end 90 to a 100, and you will find that the display includes a great many more rectangles that are no more than lines. Why? □

LEARN TO SPEAK

Logo is the computer language that's sweeping the country with its simple, "turtle geometry" way of learning computer literacy. And *Logo: An Introduction* is the new, easy-to-understand beginner's guide that makes learning and using Logo fun!

Written in simple language and set in big, easy-to-read type, *Logo: An Introduction* is specifically designed to be used by teachers and students who have little or no knowledge of Logo or computers.

Logo: An Introduction helps computer novices with:

- △ Creating simple shapes with the turtle and combining them to make more complex geometric forms
- △ Learning about "soft" and "hard" saves (temporary and permanent computer memory)

- △ Playing with symmetry and curves
- △ Learning about arithmetic, logic and Cartesian coordinates
- △ Using the idea of recursion—making a simple command repeat itself to perform more complex functions
- △ Experimenting with words and sentences —and more!

Logo: An Introduction doesn't bog you down or scare your students with complex technical details the way instruction manuals do. Instead, this book is written in an open-ended, exploratory style that captures the flexible spirit and freedom of Logo.

Use *Logo: An Introduction* as a supplement to your programming manual, as a sourcebook of ideas, as a primer on how to exploit the potential of this powerful language, and as a treasurehouse of suggestions for experiments with Logo. *Logo: An Introduction* is one book that belongs in your classroom or computer lab—and at only \$7.95, it's easy to order more than one, and pass copies around to your students. Fill in and mail the coupon today, and enter the exciting world of Logo!

IEWS...book re

Steve Gray

TRS-80 Assembly Language Subroutines, by William Barden, Jr. Prentice-Hall, Inc., Englewood Cliffs, NJ. 239 pages, paperback \$18.95. 1982.

The front cover says this is "A collection of easy-to-use subroutines for your TRS-80," and the back cover says using them "can increase productivity and reduce the tediousness of programming."

Deciding which assembly language subroutines to publish is difficult; you can't please everybody. Ten of the 65 subroutines are for conversion, such as ASCII binary or decimal or hex or octal to binary, or vice versa. Seven are for graphics, including drawing horizontal or vertical lines, boxes, or moving dots. Four involve comparing or searching strings. Nine are math subroutines for multiplying or dividing 8 by 8, or 16 by 16, or adding or subtracting multiple precision BCD. Four involve display: scrolling the screen up or down, or clearing it.

Each of the 65 subroutines is very well documented, and includes a complete description of what the subroutine does, the I/O parameters, the algorithm, a sample calling sequence with input and output values, notes on special uses or features, a decimal listing, and a CHKSUM on the validity of the data.

Each subroutine is usable as given, so it doesn't have to be used in a Basic program, and each is completely relocatable. They are all slanted toward the Models I and III, but many can be used on the TRS-80 Model II.

For those needing an introduction to assembly language programming, the two opening chapters provide 24 pages that help you to understand the use of the subroutines. However, a few drawings would greatly help in understanding Z80 registers, instructions, and addressing modes. And some sections, such as on relative addressing, are too tough for beginners.

For those who haven't the time or inclination to learn to write in assembler, this book provides the next best solution, assuming you need enough of the subroutines provided. Barden usually writes clearly and concisely, and the book—with the few exceptions noted—is a model of excellent writing, editing and production.

Codes, Ciphers and Computers: An Introduction to Information Security, by Bruce Bosworth. Hayden Publishing Co., Rochelle Park, NJ. 269 pages, paperback \$13.95. 1982.

This introduction to both traditional and recent cryptographic techniques includes over 80 Basic programs for writing and cracking many types of codes and ciphers. (A code uses words or symbols to represent the message words; a cipher substitutes characters for the original letters or transposes the characters of the original message.)

Reviews...book

After two chapters that introduce the subject and look into code systems, there are chapters on Cipher Systems, Cryptography and Computer Operations, Cryptanalysis Security and the Data Encryption Standard, Public-Key Cryptography, and Cryptographic Security Systems. A 22-page primer on Basic is provided in an appendix for those not familiar with the language, followed by answers and solutions to the dozen or two questions at the end of each chapter. For those who want to read further, each chapter includes a long list of references to books and articles.

Despite a slight tendency to wordiness, this book is a gold mine of information for anybody interested in the basics of using a computer to write or read ciphers. The programs range from a simple one that generates a three-letter code word dictionary to one that can "crack" a Caesar ciphertext message using trial and error. In between are programs for reversed zigzag transposition cipher, algebraic file scrambling encryption, Vignere table encryption, linear function encryption, etc.

No programs are included in the last three chapters, but there is a fine description of how DES works (a rather complicated system, but if you have understood the previous chapters, you should get it) and also of PKA, the public-key algorithm, which may soon rival the DES.

If you're interested in codes and/or ciphers, and have a computer you can program in Basic, buy this book.

Computer Literacy: Problem-Solving with Computers, by Carin E. Horn and James L. Poirot. Sterling Swift Publishing Co., 1600 Fortview Rd., Austin, TX 78704. 312 pages, paperback \$13.95. 1981.

Instruction Manual to Accompany Computer Literacy, by Horn and Collins. 195 pages, paperback \$7.95. 1981.

Designed for use by the beginning student with no previous computer-related coursework, this text was written to provide an understanding of computer technology, the effects of computers on society, and how computers solve problems.

The 13 chapters include an Introduction, Computer Jargon, History of Computing, Computer Applications, Computers in Government, The Value of Information in Society, Computer-Related Occupations, Computers and Humans, Computer Systems, Computer Components, Algorithms and Flowcharting, Computer Programming and Design Logic, and Beginning Basic. The book ends with a nine-page bibliography (with six references to articles in *Creative* and other publications, giving a year, volume and number, but without the name of the article or its author), and a 14-page glossary (with some inexact or incomplete definitions, such as "Micro-chip - containing more than one microprocessor.")

The book is profusely illustrated with photos, drawings, and flowcharts. Each chapter ends with various exercises, some calling for filling in blanks, others for matching words with phrases, or multiple-choice, or tasks such as "explain why the following variable names are illegal."

The writing is rather prosaic, often dull, but the book manages to cover the subject about as thoroughly as might be expected.

The Instruction Manual provides, according to the opening remarks, "a general guide to what students should learn to be computer literate, not how they should be taught." So the manual contains "chapter summaries, pertinent facts, answers to chapter exercises, additional review materials, and things to do."

ARE YOU A SMART BUYER?

For **\$89.95** this is a smart buy if you're looking for a place to store your computer, peripherals, and accessories without spending a fortune.

The CS 1632 computer storage cabinets compact yet functional design fits almost anywhere while housing your computer monitor, joysticks, software, books and peripherals all for only \$89.95.

The slide out shelf puts the computer at the right height and position for easy comfortable operation.

The fold up locking door keeps unwanted fingers off the key board when not in use.

To store joysticks just turn them upside down and slide them into the inverted storage rack.

Twist tabs on the back of center panel allow for neat concealed grouping of wires, while power packs rest hidden behind center panel on shelf.

The slide out software tray has room for 14 cartridges or cassettes and up to 30 diskettes. Most brands of software will fit between the adjustable partitions with a convenient hook for the spare key at rear. Stand fits Atari 400 & 800, Commodore 64 & VIC 20, Ti 99/4A and TRS-80.

Cabinet dimensions overall 36" high x 33-7/8" wide x 16" deep. Cabinet comes unassembled. Assembly requires only a screwdriver, hammer, and a few minutes of your time.

Choice in simulated woodgrain, of warm golden oak or rich natural walnut finish.

To order CS 1632, send \$89.95 to:

views...book re

The manual layout has the light-hearted and imaginative touch the text should have, with many old illustrations from a 1905 issue of *Country Life*, a variety of typefonts (mostly typewriter). However, the writing style is also rather prosaic, with less than half the imagination of the layout.

119 Practical Problems for the TRS-80 Pocket Computer, by John Clark Craig. TAB Books Inc., Blue Ridge Summit, PA 17214. 308 pages, paperback \$9.95. 1982.

Although the front cover says "New techniques for getting the most from your computer's data storage and programming capabilities," there is only one feature that looks new; the author provides an All-Purpose Driver (he has even trademarked the name), which "acts as an operating system for Basic. By ending your programs with GOTO1, instead of END, and running your programs in the DEF mode, the computer will always return to this operating system at the end of a run, and you can start another program just by typing its label." The driver consists of two very short lines.

The introduction says the programs "cover a wide range of subjects. There should be programs of interest for just about everyone." Well, most of these are programs you could write yourself, if you had a little programming experience and the time to write them. However, for those without the second qualification or without either, this is one of the better collections of short Basic programs, mainly because there are so many, you are bound to find a few you might use now and then.

The 119 programs include six games (Lunar Landing, Deal 'em, Numb), a couple of financial programs (Loan, Checkbook), six electronics (Decibels, Resistor Analysis, Balanced Bridge), statistics (Mean and Standard Deviation, Chi-Square), engineering (Simultaneous Equations, Polygon Area), and others (Bessel Functions, Curve Fit, Distribution, Histogram Bins, Integrals, Logarithms to Any Base, Pi by Dartboard, Random Numbers, Wind Chill Index).

To keep down the size of the book, a bare minimum of text is provided with each listing (usually just a few sentences) and an example. However, for most of the programs, such as Euler Numbers, if you have to ask what they are, you don't need them.

Reviews...book

All in all, this is better than any other current collection of TRS-80 Pocket Computer programs, mainly because of the wider choice, and also, 8 cents a program is a lot less than the value of the time it would take you to write one of them.

TRS-80 Data Communications Systems, by Frank J. Derfler, Jr. Prentice-Hall Inc., Englewood Cliffs, NJ. 167 pages, hardcover \$18.95, paperback \$12.95. 1982.

Subtitled, "A guide to the operation of TRS-80 microcomputers as communication devices," the back cover says this book "shows how any student, businessperson, or hobbyist can use the TRS-80 to communicate with information utilities and message systems."

The eleven chapters cover the role of data communications, the fundamentals (RS-232C, ASCII, bits, bauds), the TRS-80 serial port, modems, terminals, using the TRS-80 as a terminal, the TRS-80 Model II, microcomputer-based message systems, communications for the deaf (Teletype, AMRAD, Infone), large-scale communications network, and The Future. A four-page appendix provides addresses of manufacturers and distributors of data communications products.

The 4 1/2 page glossary doesn't include all the technical words in the book, such as *nibble*. Although this of itself is a small thing, it is one of many indications that this book may have been produced in a hurry. The chapters that explain the technology have almost no drawings at all; apparently nobody put the manuscript in front of a beginner (actually, or figuratively) for comments. Chapters 2 and 3, on fundamentals and the TRS-80 serial port, contain two drawings altogether, despite many, many places that cry out for explanatory figures. What you get instead is over four pages of ASCII and EBCDIC codes, and over a dozen tables on programming the TRS-80 UART.

The three subsequent chapters, on modems, terminals, and using the TRS-80 as a terminal, contain many photographs and some drawings, but they are a little late for the reader who is somewhat hazy over the technology because he couldn't picture, from the previous text alone, what goes on inside the devices. The writing is rather muddy in some important places where precise exposition is needed, and a little too compact for the beginner, who usually needs a more detailed text; this reads too often like a reference manual.

The book is a disappointment, doubly so because it comes from Prentice-Hall, which usually does a top-notch job on technical books. However, if you know enough about bits and bauds, the book is quite useful in telling you what is available in data communications for the TRS-80, but in that case, you would need only about 57 of the 167 pages.

Computers in the Schools: A Guide for Planning, by Ronald G. Ragsdale. The Ontario Institute for Studies in Education. 252 Bloor St. West, Toronto, Ont., Canada M5S 1V6. 112 pages, paperback \$6.75. 1982.

The preface carries two warnings: "the intended audience" for this book is "those people who have already acquired some knowledge and/or interest about computers"; the second has to do with the amount of objectivity in much of the material. This book presents one person's view of the world of computers in education."

The first four chapters provide the foundation for discussion.

IEWS...book re

Chapter one considers the basis for school use of computers in a general way, while chapters two through four provide more detailed descriptions of the ways in which computers are used in instructional settings.

Chapters five and six deal with how the use of computers is likely to affect elementary and secondary teachers, and chapter seven describes how administrative functions might be connected to the instructional setting.

Three additional aspects of computer use are dealt with in chapters eight through ten. Chapter eight considers the equipment and its implications; chapter nine discusses evaluating equipment and computer programs; while chapter ten deals with the organization and control of this new technology.

Chapter eleven offers some suggestions "as to where we should begin in our efforts to maximize the advantages that computers can offer us, and at the same time, minimize the possible disadvantages."

Reading this book requires wading through large pages of solid text that takes many words to say what could be expressed in much less space, and more to the point. Also, the chapter on Equipment Needs, when mentioning hardware, usually refers to special Canadian equipment, such as the Canadian Educational Microcomputer, the ECNO Network, and Telidon, none of which can be of much interest to non-Canadians. The only non-Canadian hardware mentioned is the DEC VAX 770 and PDP-11, and those only very briefly.

If you're a Canadian educator, you may find some value in this book; others won't.

Practical Data Base Management, edited by Auerbach Publishers Inc., Reston Publishing Co., a Prentice-Hall Co., Reston, VA. 444 pages, hardcover \$24.95. 1981.

According to the preface, "The primary objective of this book is to provide an easy-to-read, organized guide to the practical issues of planning, designing, and implementing data base-supported information systems."

The 23 chapters are divided into six parts: Management Perspectives (planning, management issues, system development life cycle), Data Base Environment Components (the data base management system, data dictionary/directory, function of data base administration, user/system interfaces, data independence), Evaluation and Selection of Software (criteria, alternative approaches to DBMS performance evaluation, alternate architecture for active data dictionary/directory systems), Administration of the Data Base Environment (organization and job descriptions, impact of personal privacy requirements, data base supported systems and auditing), Design and Development methodology, tradeoffs in design), Current Directions (trends in data base systems, the backend computer, operational and technological issues in distributed data bases, technology of data translation).

Although this book may be somewhat daunting, with page after page of solid text, there is more than enough here to satisfy almost anybody's need to understand data bases, written in an information-packed, straightforward style that is almost all lean meat, with only a slight tendency to wordiness in some places.

Although not intended as a comprehensive tutorial, this book presents practical experience and insight for the practicing manager who is "responsible for the planning, design, implementation, and maintenance of a data base environment."

Reviews...book

Using Basic, by Rich Didday and Rex Page. West Publishing Co., 50 West Kellogg Blvd., St. Paul, MN 55165. 538 pages, paperback \$17.95. 1981.

The authors say in the preface that the central theme of this textbook is practicality, and that it presents a practical approach to system design, useful programs that solve problems often met by practicing programmers, user-friendly programs that save time and frustration, and portable programs that will run on various Basic systems with minimum changes.

The book is said to differ in several ways from other introductory texts in Basic, by concentrating on a standardized form of the language (ANSI Minimal Basic), by emphasizing program methodology, by emphasizing practical applications, and by using an interactive, experimental approach to learning to program.

Part I is an eleven-chapter, 300-page self-contained introduction to Minimal Basic, written for the beginner. Part II, 110 pages long, Applications of Standard Basic, contains a small variety of subjects, including simulation, sorting, packing and pointing. Part III, Enhancements to Basic, covers several features not yet standardized: strings, files and "other enhancements" (longer variable names, multi-statement lines, logical operators, and four more).

Three different audiences will find this text useful, according to the preface—business programming, general programming, and general computer knowledge—and a table suggests "possible avenues through the book suited to each of these interest groups."

Seven appendixes provide information on how to use a computer, a glossary, concise description of Minimal Basic, answers to odd-numbered exercises, index, two-page guide to Basic commands, and a brief Quick Reference Guide.

The book is full of helpful boxes around important points. The writing style is light and informal, with cartoons that illustrate various points, and a slow and easy approach to Basic.

This is one of the easiest and more worthwhile Basic books to read, with a more meaningful set of programs than most such texts, and a light-hearted touch that helps over the rough spots but never gets silly. This user-friendly text seems to reflect a lot of teaching experience. □

Bring printer noise to a screeching halt.

Introducing SoundTrap.

Put your Epson,* Okidata,** C.Itoh† or other 80 column, dot matrix printer inside SoundTrap and close the lid on printer noise. SoundTrap traps irritating screeches before they hit the air. And before they hit your ears.

Finally, you and your printer can work side by side. Simultaneously. You can hold meetings. Speak in normal tones. Talk on the phone. Even hear yourself think, while your printer cranks out data. So you crank out more work.

SoundTrap also solves your paper problems. When tilted, (with optional stand), SoundTrap keeps your paper flowing from one neat stack into another. At the same time, it doubles as a convenient data holder, while saving desk space.

Stop the screeches before they stop your work. Get yourself a SoundTrap. \$129 as shown. See your dealer or call Trace. 800-24-TRACE. In California call collect (415) 964-3115.

SoundTrap with stand becomes a convenient data holder and paper organizer while saving desk space.

The First and Only System to Backup
Diskettes Protected by Bad Sectoring
without modification to your drive.

ATARI DISK BACKUP SYSTEM \$49⁹⁵

Superclone is the only ATARI diskette copier system that lets you backup just about ANY 'copy protected' diskette, including those protected by 'bad sectoring.' Bad tracks and sectors are created without modifications to or adjustments of your hardware. Each backup diskette generated by Superclone functions exactly like the original...self-booting, etc. (In fact, we suggest that you use the backup and save the original.)

Superclone includes:

SCAN ANALYSIS - Map of diskette contents (Location of data, bad sectors, etc.)
FORMATTING/BAD SECTORING - Non-ATARI DOS formatting and bad track/sector creation.
BACKUP - Copies just about everything we can find... regardless of protection scheme.

Superclone is user-friendly and simple to use.

PIRATES TAKE NOTE: SUPERCLONE only allows two copies to be made of any specific diskette. Sorry!!!

ELIZA IS HERE!

AT LAST! A FULL IMPLEMENTATION of the original ELIZA program is now available to run on your microcomputer!

Created at MIT in 1966, ELIZA has become the world's most celebrated artificial intelligence demonstration program. ELIZA is a non-directive psychotherapist who analyzes each statement as you type it in and then responds with her own comment or question — and her remarks are often startlingly appropriate!

Designed to run on a large mainframe, ELIZA has hitherto been unavailable to personal computer users except in greatly stripped down versions lacking the sophistication which made the original program so fascinating.

Now, our new microcomputer version possessing the **FULL** power and range of expression of the original is being offered at the introductory price of only \$25. And if you want to find out how she does it (or teach her to do more) we will include the complete **Source Program** for only \$20 additional.

Order your copy of ELIZA today and you'll never again wonder how to respond when you hear someone say "Okay, let's see what this computer of yours can actually do!"

ELIZA IS AVAILABLE IN THE FOLLOWING DISK FORMATS:

1. Standard 8 inch single density for all CP/M based computers \$25 for ELIZA.COM + add \$20 for Microsoft BASIC-80 Source
2. 5 1/4 inch CPM for Apple II equipped with Z-80 SoftCard \$25 for ELIZA.COM + add \$20 for Microsoft BASIC-80 Source
3. 5 1/4 inch for 48K Apple II with Applesoft ROM and DOS 3.3 \$25 for Protected File + add \$20 for Applesoft Source
4. 5 1/4 inch for 64K IBM Personal Computer \$25 for Protected File + add \$20 for IBM Disk BASIC Source
5. 5 1/4 inch for Osborne I Microcomputer \$25 for Protected File + add \$20 for Microsoft BASIC-80 Source

Introducing the Most Powerful Business Software Ever!

TRS-80™ (Model I, II, III, or 16) • APPLE™ • IBM™ • OSBORNE™ • CP/M™ • XEROX™

The VERSABUSINESS™ Series

Each VERSABUSINESS module can be purchased and used independently, or can be linked in any combination to form a complete, coordinated business system.

VERSARECEIVABLES™ \$99.95

VERSARECEIVABLES™ is a complete menu-driven accounts receivable, invoicing, and monthly statement-generating system. It keeps track of all information related to who owes you or your company money, and can provide automatic billing for past due accounts. VERSARECEIVABLES™ prints all necessary statements, invoices, and summary reports and can be linked with VERSALEDGER II™ and VERSAINVENTORY™.

VERSAPAYABLES™ \$99.95

VERSAPAYABLES™ is designed to keep track of current and aged payables, keeping you in touch with all information regarding how much money your company owes, and to whom. VERSAPAYABLES™ maintains a complete record on each vendor, prints checks, check registers, vouchers, transaction reports, aged payables reports, vendor reports, and more. With VERSAPAYABLES™, you can even let your computer automatically select which vouchers are to be paid.

VERSAPAYROLL™ \$99.95

VERSAPAYROLL™ is a powerful and sophisticated, but easy to use payroll system that keeps track of all government-required payroll information. Complete employee records are maintained, and all necessary payroll calculations are performed automatically, with totals displayed on screen for operator approval. A payroll can be run totally, automatically, or the operator can intervene to prevent a check from being printed, or to alter information on it. If desired, totals may be posted to the VERSALEDGER II™ system.

VERSAINVENTORY™ \$99.95

VERSAINVENTORY™ is a complete inventory control system that gives you instant access to data on any item. VERSAINVENTORY™ keeps track of all information related to what items are in stock, out of stock, on backorder, etc., stores sales and pricing data, alerts you when an item falls below a preset reorder point, and allows you to enter and print invoices directly or to link with the VERSARECEIVABLES™ system. VERSAINVENTORY™ prints all needed inventory listings, reports of items below reorder point, inventory value reports, period and year-to-date sales reports, price lists, inventory checklists, etc.

VERSALEDGER II™ \$149.95

VERSALEDGER II™ is a complete accounting system that grows as your business grows. VERSALEDGER II™ can be used as a simple personal checkbook register, expanded to a small business bookkeeping system or developed into a large corporate general ledger system **without any additional software.**

- VERSALEDGER II™ gives you almost unlimited storage capacity (300 to 10,000 entries per month, depending on the system),
- stores all check and general ledger information forever,
- prints tractor-feed checks,
- handles multiple checkbooks and general ledgers,
- prints 17 customized accounting reports including check registers, balance sheets, income statements, transaction reports, account listings, etc.

VERSALEDGER II™ comes with a professionally-written 160 page manual designed for first-time users. The VERSALEDGER II™ manual will help you become quickly familiar with VERSALEDGER II™, using complete sample data files supplied on diskette and more than 50 pages of sample printouts.

SATISFACTION GUARANTEED!

Every VERSABUSINESS™ module is guaranteed to outperform all other competitive systems, and at a fraction of their cost. If you are not satisfied with any VERSABUSINESS™ module, you may return it within 30 days for a refund. Manuals for any VERSABUSINESS™ module may be purchased for \$25 each, credited toward a later purchase of that module.
